Of course we cannot offer you an example for an *InfoBase* with (your) appointments, but this *InfoBase* with **historic anniversaries** is also a kind of dates managment. It administers memorial dates, so to speak.

Together with the *InfoBase Window* there appears a little window, called ***Dates Control***, that is specialized for handling dates of various kind (to open this for any *InfoBase* use command **Date Control** in menu **View**). Do click on the button labeled '8' in the group labeled 'next days'. You'll see then the recorded anniversaries for the next 8 days. If accidently there isn't any aniversary recorded for this period (so far we collected only 96 records that do not cover all days of the year), or if you want to see even more, click on the '+' at the right. This widens the range of days by one per click.

If you find an entry this may be a good occasion to try setting an alarm for that day. Activate the *info* and select **New Alarm** from menu **Info**. Adjust the date in the dialog **New Alarm** and click **OK**. The alarm will ring in time to remind you on the anniversary (but of course *infoHandler* must be started at that day).

Note: There may be some German still be found in the InfoTitles, please be lenient!
