

This is the main switchboard telephone number at Microsoft Corporation. If you do have some complaints about your operating system and also a working Phone Dialer - just click on the icon.

Alternatively to the *InfoLink* you can store the phone number as 'embedded link' like this:

[<+1 \(425\) 882-8080>](tel:+1(425)882-8080)

In this case you may omit the prefix 'phone:' - embedded links that begin with a '+' or a digit are interpreted as phone numbers. To call Microsoft double click on this link.

Hint: Select Edit Mode (F3) and change the number if you prefer to call a good friend instead of MS.
