

<info: record 2 linked from record 1 ||20|*>

This is a link to another *InfoRecord* in this same *InfoBase*. We created this by simply dragging the other record from the *InfoList* above onto this *InfoText* area, pressing the right mouse button while dragging. Then we replaced the absolute path to the *InfoBase* by a **star** that stands for the active (this) *InfoBase*, thus making the link insensitive to changes of location.

Go now to the other record: just double-click on the link.
