

**Did you come here using the link in record '[record 1 links to record 2](#)'?**

- **If not, first activate this other record and look at its text. You'll find there an active link to this record.**
- **If yes, try now the command Go Backward to go back to the other record. You find this command in menu Extras/History but there is also a button on the toolbar and the hotkey Alt+Left available for this.**

Note: Going back (and forth) in the *Info* history is of course not limited to the records of one *InfoBase*, you can even go back to *InfoRecords* if their *InfoBase* was closed in the meantime (it will be re-opened in this case).
