

Welcome to **Peep Show Lite v1.0** for Windows95/98/NT!

What is it?

Peep Show Lite allows you to literally cut "holes" in any window in Windows! Don't bother minimizing or moving windows out of the way anymore, just cut a hole (or as many as you want) right through it.

How to use?

First be sure the program is active (it should be by default). To create a hole in a window, press and hold the left and right mouse button over the window and begin dragging the mouse to create a shape. Once the shape is to your desired size, release the mouse buttons and a hole should be punched right through the window! To remove the hole, just press and release both mouse buttons anywhere on the window where the hole is. That's all!

Some features:

- *Different shaped holes: rectangle, freehand, ellipse, round rectangle
- *Invert hole option (e.g. cut out hole traced, or keep traced section and cut away rest)
- *Specify maximum number of holes you want to be able to create in each window
- *Pen options: width, type
- *And more!

Peep Hole tab

Program Active

If this option is checked, the program will be active and you'll be able to create holes.

Cut Away Method

If you want a hole to be created in the shape you create, make sure the **Cut out section traced out by the mouse** option is checked. If you want the section you traced out to be preserved but want the rest of the window to be cut away, check the **Keep section traced out, cut away rest** option.

Number of holes

Specify the maximum number of holes you want to be able to create in each window. For example, if you set this to 2, you'll be able to punch 2 holes in any window. If you try to create a third hole, both of the previous holes will be cleared and a new one will be created (since you have the option set to 2). Note: when pressing the left and right mouse button to clear the window from it's holes, ALL holes will be cleared.

Drawing tab

Shape Type

Choose the shape you wish to use when creating the holes.

Pen Width

Select what you want the pen width to be when drawing the shapes. It's recommended that the smallest setting should be set if you have the Ellipse option set, though it really doesn't matter.

Use solid black line when freehand drawing

If this option is checked, then a solid black line will be used if the freehand drawing shape type is set. If this option isn't checked, then an animation type drawing method will be used.

"Trap" cursor to window dimensions while drawing

If this option is checked, then when you are tracing out a shape on a window, the cursor will be restrained to that window's dimensions. If this option is unchecked, you'll be able to go beyond the window's dimensions, however, only THAT particular window will be affected when the hole is created.

Miscellaneous tab

Start program on Windows startup

If this option is checked, then **Peep Show Lite** will be loaded every time you turn on your computer (and load Windows). If this option isn't checked, then you'll have to manually start the program.

Save settings on exit

If this option is checked, then all your settings will be saved when you exit the program.

Minimize to system tray

If this option is checked, then an icon will appear in your system tray (bottom right corner of your screen) for easy access to the program's options. If this option isn't checked, then the program will sit on the taskbar.

Play sound when hole is created

If this option is checked, then whenever a hole is created the sound you specify in the box below this option will be played. If this option isn't checked, then no sound will be played.

Test (button)

Press this button to test the sound you chose.
