Vendor List

NOTE: This document demonstrates a trick with TrueValue and FalseValue. As you can see in code corresponding button VenBtn FalseValue set as empty string, **TrueValue** set as **#252**. In report template there is a field **a:preferred**. The first back slash in this field formatted by font "**Windings**" . As result, there is a char "✓" in column "preferred" for a.preferred=true.

N	Vendor name	Country	Phone Fax	Preferred
