

This is a report including multiple sheets.

Concepts shown:

- Empty Comments: Normally you will like to put comments on special cells, not in all of them. FlexCel handles this by automatically deleting empty comments from the report. In this sample, sheets 2 and 4 have a comment, and the others don't.
- Active sheet not first: The sheet that is used to propagate the PagesDataSet, is the active sheet that you save when you save the workbook. In this sample this is sheet 2, so this is the sheet that will be copied for the entries of the events dataset. Always after generating, the active sheet will be reset to the first.
- Merged cells: This is handled transparently.
- Unicode: This should be handled transparently too. The comments in sheet 2 and 4 and the cells on that sheets are a sample of this.
