

Read Before You Install iTunes

You can use iTunes to create your own personal digital music library and easily organize and listen to your collection of digital music files. You can also create your own custom audio CDs and transfer your music to an Apple iPod portable digital music player. If you are installing iTunes for use with an iPod, after installing iTunes, use the cable that came with your iPod to connect your iPod to your computer.

System Requirements

iTunes 4.1 requires Mac OS X version 10.1.5 or later (Mac OS X 10.2.6 is recommended). Music sharing and DVD burning require Mac OS X version 10.2.4 or later, and AAC encoding requires QuickTime 6.2 or later. 256 MB RAM is recommended.

Make sure you have the latest update of Mac OS X. Get the latest update by choosing Apple menu > System Preferences, then clicking Software Update, and then Update Now or Check Now. After you install an update, it's a good idea to click Update Now or Check Now again to make sure you've gotten all the latest versions. To get the latest upgrade to Mac OS X, visit www.apple.com/macosx.

To create audio or MP3 CDs with iTunes, you need an internal Apple CD-RW drive. To back up your music to a DVD, you need an internal Apple SuperDrive. Some third-party CD-RW and DVD-RW drives may also work.

If you plan to listen to music previews or buy music from the iTunes Music Store, a DSL, cable modem, or local area network (LAN) Internet connection is recommended.

Installing iTunes 4.1

Double-click the iTunes 4.1 Installer and follow the instructions that appear.

If you see a message that you do not have sufficient privileges to install this software, click the lock on the first screen of the installer window and enter an administrator name and password. The administrator users for your computer are shown in the Users pane of System Preferences (or in the Accounts pane if you're using Mac OS X version 10.2). For more information, search Mac Help (in the Help menu).

What's new in iTunes 4.1

Using iTunes 4.1, you can:

- Use iTunes on Windows 2000 and Windows XP computers; you can also share music between Macintosh and Windows computers
- Sync On-The-Go playlists or voice notes that you create on your iPod with iTunes

- Burn large playlists to multiple CDs or DVDs; when your playlist is too large to fit on one CD or DVD, iTunes asks you to insert another disc
- Drag a webpage from the iTunes Music Store to a document or email
- Buy Audible spoken word content from the iTunes Music Store using your Apple Account

For more information

For more information about using iTunes, open iTunes and choose Help > "iTunes and Music Store Help." Type a question in the search field, or click Overview or Contents.

If you've purchased music from the Music Store and have a billing question, open iTunes and choose Help > Music Store Customer Service.

For more information about using your iPod with iTunes, open iTunes and choose Help > iPod Help.

For the latest news about iTunes, visit the iTunes website at www.apple.com/itunes or the Apple Support website at www.apple.com/support/itunes. For the latest information about iPod, visit www.apple.com/ipod.
