New in Version 3.0

Compatible with OS X 10.3 (Panther)

The Trashcan does not display a black box around it (as does iCan 2.2.1)

Improved trashcan appearance

Quartz graphics is now used for drawing iCan themes which results in much nicer and smoother looking trashcans.

Trash Poofs

Optional dock-like trash poofs appear whenever the trash is filled or emptied.

Poofs are sizeable, and custom theme poofs are also supported.

System-wide trash menu

The menubar icon of the new system-wide iCan menu changes its appearance to show whether the trash is full or empty.

Also, the icon can be of the current iCan theme.

The menu replicates iCan's contextual menu items.

Smart Empty

An option to display a hierarchal list where user selected trashed items can be deleted.

Move to Trash

Added an option to the system menu and contextual menu to move Finder items to the trash.

Finder Command-Shift-Delete intercept

iCan intercepts pressing Command-Shift-Delete (to empty the trash).

This option empties the trash using iCan instead of the Finder, and also display an informative (i.e. number and size of trash items) warning before emptying the trash.

Fast Delete

Useful when deleting a very full trashcan.

Hide Trash

Used with the new system-wide menu, you can now hide and show the trash can.
