

The **Hard Disk Drive** is the basic **storage device** available in **Windows based computers**.

Power Defrag 3.00 will list all of your drives under each available task. You can select which drives you want to perform operations on by **clicking in the box to the left of each drive**. A check mark will appear.

Your drives are listed by **drive letter** and **the volume label** is also shown. You can see information about the **capacity** of each drive and the **file system** which it is using by hovering your mouse over the icon for that drive.
