

**Power Defrag 3.00** is a tool which optimises the operation of the disk defragmentation, disk error checking and registry maintenance tools supplied with Microsoft Windows.

At present, **Power Defrag 3.00** supports **Windows 95, 98, 98 SE, ME** and **XP**.

The exact functions which are available will depend on the version of Microsoft Windows which you are running. Use the **View Menu** to display the more **advanced** version of this document and to explore the options which are available on your system.

Explore the **Function Tree** to the left of this document to see a list **of accessible drives** on your computer and the **basic tasks** which can be performed using this program.
