

\*\*\*\*\*  
Using CMYK Color Percentages for the PANTONE MATCHING SYSTEM®  
\*\*\*\*\*

This application note provides assistance for printing PANTONE\* colors to a DeskJet 1200C or PaintJet XL300 with software applications that require a 0 to 100% range in their color picker. The percentages indicated in the attached PANTONE tables will create approximations to PANTONE approved colors.

Be sure to use the correct table for your printer: DeskJet 1200C or PaintJet XL300.

\* PANTONE, Inc. check-standard trademark for color.

\*\*\*\*\*  
Using the PANTONE MATCHING SYSTEM with the DeskJet 1200C/PS and PaintJet XL300/PS printers  
\*\*\*\*\*

\*\*\*What is the PANTONE MATCHING SYSTEM?\*\*\*

The PANTONE MATCHING SYSTEM is the international standard for color communication in the graphic arts industry. Its purpose is to ensure effective color selection, specification and control among clients, graphic designers, printers (printing presses), and ink manufacturers world wide. At the heart of the system are color reference manuals that display colors, with precise printing formulas for achieving these colors.

\*\*\*How does the PANTONE MATCHING SYSTEM apply to my printer?\*\*\*

The DeskJet 1200C and PaintJet XL300 printers are licensed PANTONE Color printers. This means that there is a PANTONE Color Lookup Table® for each printer that Pantone-approved software packages can use to print out approved simulations of PANTONE colors.

DeskJet 1200C

PANTONE colors are only licensed under the following conditions on your DeskJet 1200C printer.

1. Plain paper. (Champion Datacopy or KYMCOPIY LUX paper recommended)
2. Normal or High Quality/Best print quality.
3. Hewlett-Packard DeskJet 1200C print cartridges.

PaintJet XL300

PANTONE colors are only licensed under the following conditions on your PaintJet XL300 printer.

1. Hewlett-Packard CX paper.

2. Cluster color blend.
3. Best print quality.
4. Hewlett-Packard PaintJet XL300 print cartridges.

\*\*\*What limitations are there to using the PANTONE MATCHING SYSTEM?\*\*\*

PANTONE colors printed by licensed printers are only approximations. These colors are good for proofing, but not necessarily accurate for final copy or exact colors for logos and other color-critical artwork. Only by mixing PANTONE inks together can you get true PANTONE color.

Software applications that support PANTONE will generate specific CMYK (Cyan, Magenta, Yellow, Black) values that are sent for each PANTONE color. If these CMYK values match the CMYK values in the PANTONE Color Lookup Table for your printer, the specified PANTONE color will be printed by the printer.

\*\*\*What problem might I encounter with these limitations?\*\*\*

The main problem you may encounter with PANTONE colors on the DeskJet 1200C or PaintJet XL300 printers is that software applications that are licensees of PANTONE may not have elected to use or integrate the PANTONE Color Lookup Table for your printer. These applications may send values to the printer that are different than the ones needed to produce that PANTONE color. If the application software sends the wrong values, the PANTONE color will not print correctly.

\*\*\*How do I make sure I get the PANTONE color I want from the printer?\*\*\*

To get the color you want from the printer, change the CMYK value that is sent by your application to the printer to match the CMYK value in the attached PANTONE table. Be sure to use the DeskJet 1200C table for the DeskJet 1200C and the PaintJet XL300 table for the PaintJet XL300.

1. Select a PANTONE color in the attached PANTONE table.
2. Access the Edit Color Palette or similar function in your software application.
3. Change the CMYK value for the PANTONE color in your application to match that of the CMYK value you picked in the color-matching table supplied with this Application Note. Be sure to save the CMYK value that you changed in your application for future use.
4. Select the Options button from the Print... dialog and set "Color/Grayscale" in the Print: option. When the printer driver has the Color/Grayscale option set, the CMYK values are passed directly to the printer. Because there is NO gamma or color correction, the screen color will appear brighter than the actual printed output. Recognize that with the same file, all colors (even NON-PANTONE colors) will be affected by this procedure. Do not use "Calibrated Color/Grayscale".

PLEASE NOTE: The number values in the tables range from 0 to 100%. If your application has a Color Editor range larger than 100% (e.g., 0 to 255 or 0 to 65535), you can get an application note "Using the PANTONE MATCHING SYSTEM for the

HP PaintJet Family Printers". This note gives RGB values from 0 to 255. Unlike CMYK values, RGB values are the same for both printers. Use this PaintJet Family Printer note for both the DeskJet 1200C and the PaintJet XL300.

This document is available through HP FIRST (HP Fax Information Retrieval Support Technology). Dial (208) 344-4809 from your fax machine.
