QRP HomeBuilder Version 2.0
copyright 1995 by Jenna Design
e-mail: jenna.design@awinc.com
Released July 1995

The QRP HomeBuilder package consists of 4 files:

QRPHB.EXE
QRPHB.HLP
BWCC.DLL
INFO.WRI

This program is intended for beginner-intermediate level Amateur Radio enthusiasts who
build there own radio equipment. QRP HomeBuilder consists of 5 seperate programs which
may be used in the design and/or testing of homebrew radio equipment.
Included are schematics and an extensive help file.

REQUIREMENTS:

An IBM compatible PC with 4 MB of RAM.
Microsoft Windows 3.1X (tm).
A mouse.
About 450K bytes of harddisk space.

INSTALLATION:

Please create a new directory (ie. \QRP) and copy all four files into it.

If the program will not load into memory, the likely culprit maybe the dll, BWCC.DLL.
This DLL is the control graphics library and may already exist on your harddisk.
It is important to use the version shipped with QRP HomeBuilder and problems may arise if
another
version of this DLL is in your path.
If another version exists, it may be in your \Windows\System directory or perhaps in your
\Windows directory.
In general, as long as the EXE and DLL are in the same directory, there should be no problems.

DISTRIBUTION:

QRP HomeBuilder is FREEWARE.   Distribute freely.
Jenna Design does NOT provide distribution of this program by postal or electronic mail.
