

INTRODUCTION

FolkFinder: Assistant for Windows is a program that provides four easy to use utilities that supplement and work with your favorite genealogical program providing:

1. A calendaring utility that displays accurate Old Style/New Style calendars for over 95 locations in over 30 countries. This utility automatically displays the difference between two dates and can determine birth or death dates given a reference date and the number of years, months and days to add or subtract. The utility properly adjusts for transitions between Old Style/New Style calendars.
2. A full-function calculator with 15 digit capacity and a separate memory display with memory values always displayed.
3. An automatic conversion utility that instantly displays equivalent values in all related fields of the category displayed. Enter a value, such as 5 rods, and the utility automatically displays equivalent feet, meters, furlongs, kilometers and more. Over 30 conversion calculators are available in the following categories: length, angular, area, volume, weight, metric, numbers and miscellaneous. This utility also provides conversions between Roman/Arabic, English/Metric and archaic/modern numbers.
4. A utility that provides birth year ranges from census table entries from 1790 through 1840.
5. A utility that displays SOUNDINDEX codes for names.

SYSTEM REQUIREMENTS

FolkFinder: Assistant for Windows is designed to run on an IBM PC or 100%-PC compatible computer using a 286, 386, or 486 processor and running Microsoft Windows 3.x in standard or enhanced mode. One floppy-disk drive (5.25-inch drive with 1.2 MB capacity or 3.5-inch drive with 720KB capacity) and a hard drive.

FolkFinder: Assistant for Windows requires 724K of available disk space if you already have vbrun300.dll installed. If you do not have vbrun300.dll installed, an additional 399KB of disk space will be required.

QUICK STARTING FolkFinder: Assistant for Windows Demonstration Version

1. PKUNZIP -E FFADEMO Extracts all files (already done)
2. Read this README.WRI (or README.TXT) file
3. Select RUN from the File menu of the Program Manager or File Manager.
4. Type
D:\DIRECTORY\setup
where D and DIRECTORY are the target drive and directory where you unzipped FFADEMO.
5. Follow the setup instructions on the screen.

You are now ready to begin using FolkFinder: Assistant for Windows.

Starting FolkFinder: Assistant

FolkFinder: Assistant is started by double clicking the FolkFinder: Assistant icon in the FolkFinder: Assistant Group. This will start FolkFinder: Assistant.

Please note that this is a demonstration version of FolkFinder: Assistant.

1. The calculator and 1830-1840 census tables are fully functional.
2. The list of countries supported for the Julian/Gregorian calendar is displayed.
3. The calendar is fully functional for the country Estonia.
4. All conversion tables are shown, but only angular, standard area, standard lengths and distances, and metric conversions are fully functional.
5. SOUNDEX codes are generated for Smith only.

To order a fully functional version of this product, refer to ORDER.WRI. You will receive the software on a 3.5" or 5.25" IBM compatible diskette and a 47 page user guide. You will become a registered user entitled to technical support.
