

Thank you for trying  $WAM^+^{\circ}$  version 2.0, we hope that you find it useful. Please check the file called FILELIST.DOC to insure that you have all necessary files.

For a synopsis of the changes since the previous version click on the "Whats New in WAM+ 2.0" icon to see the file "WHATSNEW.WRI". <u>All users of previous versions of WAM+ should read this file as there is important information in the first paragraph.</u>

When evaluating this software please be sure to check out our extensive help/glossary system. In addition to instructions for use of the program there are various tutorials, reference tables, definitions, and interesting facts.

If you have received this program as a zip file (WAM20.ZIP) or a self-extracting file (WAM20.EXE), copy the contents of this file, after extracting it, to a 3.5" diskette or an empty <u>temporary</u> directory on your hard disk. <u>Run</u> SETUP.EXE from the <u>File</u> menu in Program Manager.

This program should be installed using the "setup" program. It will probably not function properly otherwise.

WAM+ was written in C++ using Borland's Object Windows Library.

To contact the author, please see the help topic "Contacting The Author".
