

Congratulations, you've entered the world of modular graphics and multimedia from VideoLogic

Register your VideoLogic product NOW to get the following benefits:

1. Access to technical support lines and bulletin boards for the very latest technical information including updated drivers.
2. Regular updates on product enhancements, new products, and services.
3. VideoLogic promotions and special offers.

(See the end of this document for details on how to register.)

Expand your multimedia capabilities with VideoLogic's unique modular graphics and multimedia system

Your GraftixStar is one of a new generation of leading price/performance 64-bit graphics accelerators with advanced multimedia expandability. You can expand GraftixStar by adding the following options:

1. Extra graphics memory

Increase the performance and color depth of your GraftixStar card by adding additional graphics memory.

2. VMC Controller

The VMC (VESA Media Channel) Controller fits all three GraftixStar cards, and provides a dedicated high-speed video channel for advanced multimedia capabilities. With the controller fitted you can add one or all of the VMC expansion cards outlined below.

3. VMC Expansion Cards

3.1 Captivator Pro and Captivator Pro TV

Exceptional quality live video or TV in a window!

VideoLogic's Captivator Pro enables you to display top quality, full motion video on your PC from camcorders, VCRs or other video sources. Captivator Pro uses the industry-standard VMC to provide top quality, low cost, video-in for presentations, security surveillance and video conferencing. With Captivator Pro you can display scaleable full motion video in a window; adjust video contrast, saturation, brightness, and gamma; and capture video clips and stills.

Captivator Pro TV shares all the features of Captivator Pro, plus the ability to display full size, full motion TV in a window. You can connect Captivator Pro TV to an aerial, VCR, or cable/satellite decoder.

Both Captivator Pro and Captivator Pro TV are based on VideoLogic's PowerStream video stream processor which performs high quality dithering and supports direct attachment to VMC for communication with other graphics and multimedia cards. Captivator Pro and Pro TV support multiple video streams, making them ideal for video conferencing.

3.2 MPEG Player

Highest quality MPEG video playback ever!

VideoLogic's MPEG Player video playback card uses the industry-standard VMC to bring exceptional quality MPEG video to professional and home users. Ideal for training, POS, or information kiosk applications, MPEG Player's razor sharp TV-quality video, and CD-quality sound are equally suited to home education or entertainment.

MPEG Player decodes MPEG1-encoded video and audio streams, and this video data can be displayed by any VMC enabled graphics system. Unlike VGA-connected systems, MPEG Player is compatible with all supported graphics resolutions. VideoLogic's PowerStream video processor provides real-time video dithering and scaling using the SmoothScale algorithm which removes the jagged edges associated with some of the cruder interpolation techniques. Used with one of VideoLogic's multimedia and Windows accelerators, MPEG Player provides a complete multimedia system with exceptional quality video, and playback at up to 30 frames per second.

HOW TO REGISTER

1. Print this page.
2. Complete the registration details.
3. Mail or fax this page to one of the addresses shown below.
