IRISPen™

NEW VERSION 3.0

The best pen doesn't write, it reads!

The IRISPen™ offers you instantaneous data input at your fingertips. Just slide this reading pen over your typed or printed text or figures and they are entered directly into your application, at the cursor position.

Imagine you have to enter figures in your spreadsheet, new addresses in your database, information from cheques in your book-keeping software or texts in your wordprocessor. With the IRISPen™, up to 100 characters per second can be entered, as if they were keyed in, but then 10 to 25 times faster. The IRISPen™ consists of a pen-sized scanner and a unique, powerful text recognition technology. This electronic "hi-liter" makes it easier to take notes from books, magazines, newspapers, catalogues, brochures, letters, memos, etc.
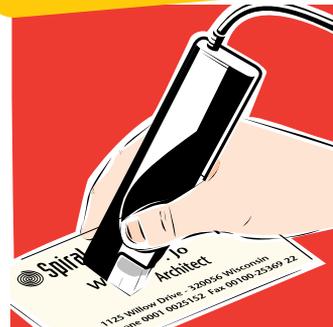

Since the IRISPen™ connects directly to the computer's port, you have a portable system, an ideal solution for notebook users.

IRISPen™ Executive

Ask us About our Banking Version

The new IRISPen™ Executive software (Windows version only) adds spectacular capabilities : bar code reading, speech synthesis and handprinted numeric recognition.

• The bar code reading opens a world of new applications where extreme accuracy and high speed are mandatory in identification processes. This option supports bar code reading of all standards - Code 39, Code 93, Codabar, EAN-8, EAN-13, UPC and Interleaved 2 of 5.

• Speech synthesis using L & H Quality Speech technology of the recognized text opens an entire world of multimedia applications and allows natural and clear auditive feedback where you scan without looking at the screen.

• Form reading, indexing etc. benefit directly from numeric handprinted recognition thanks to I.R.I.S.' unique technology!

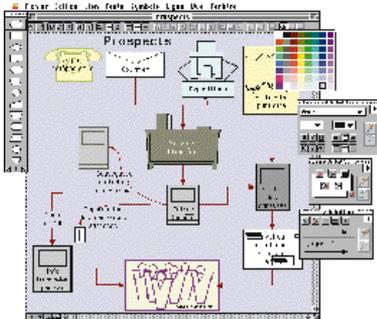

MacFlow™

Easiest way to create presentation-quality charts

NEW VERSION 4.0

Blows the Competition away!

MacFlow™ 4.0 , the newest and most powerful release of the bestselling flowchart design and development application on the market, is now available. MacFlow 4.0 produces top-quality diagrams fast, without tedious drawing.

MacFlow 4.0 offers a new toolbar, allowing clickable access to 29 of the most common charting commands. With a single click you can shadow any symbol, change the font size, rotate a symbol, align objects, or create a curved line.

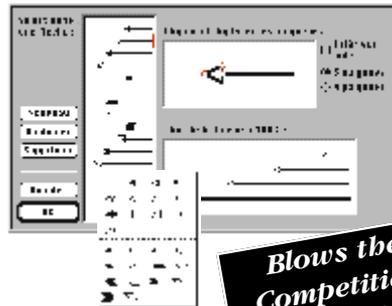

Over 400 symbols included

MacFlow 4.0 now includes over 400 ANSI standard and specialized, intelligent symbols. These symbols range from the basic rectangles and ovals to commonly used business graphics or specialized symbols, etc.

Line & arrowhead styles galore

Styles for more than a dozen line types, and several dozen arrowheads and other endpoints greatly enhance the line drawing capabilities of MacFlow. Many dashed and dotted line styles are available, and others may be defined. Same with the endpoint styles: if none of the 25 arrowheads, fletchings, nodes, and other endpoint styles suit you, modify them or create your own. Any selected line can be changed into a right-angle or Bézier-curved line with a single click.

Extensibility

Plug-in modules offer unlimited potential to MacFlow users. Thirteen modules are currently included, offering automatic off-page connections, Boolean logic calculations, graphical additions, text-to-speech translation, voice annotation, and much more. Other modules can even be created.

Flowcharts from Outlines - Automatically

Automation of chart creation is available in several areas. A built-in text translator allows outlines in text format to be quickly converted to flowcharts, using one of a dozen common formats. An **Autoconnect** command draws lines from selected objects to new symbols, as they are placed.

And much, much more

Other features in MacFlow 4.0 include multiple open documents, up to 32 x 32 pages per chart, zoomed, active views from 12.5% and 800% of actual size, *bring to front* and *send to back* commands, grouping and ungrouping capabilities, symbol rotation, a background layer, a browse/presentation mode, etc.

MacUser

WinFlow

MacFlow now available for Windows

The easiest, best-selling flowcharter is now available on both the Windows and the Macintosh platforms, with file-level compatibility between them. All documents created with MacFlow 4.0 are file-level compatible with WinFlow for Windows. With drag-and-drop simplicity, WinFlow makes flowchart creation an enjoyable task for anyone.

NEW PRODUCT

Readiris™
Convert your paper documents to editable electronic text

Reads all Eastern European languages
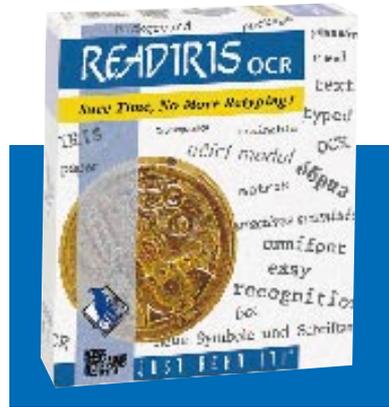

Use Readiris™ to automatically enter text in your application, without tedious retyping! Readiris™ lets you start with any document - even those in less than perfect quality (faxes and dot matrix printed texts) - and convert them to editable electronic text. Readiris™ adds the world's best-selling, most accurate text-recognition capability directly to your word processor, spreadsheet, DTP - in fact all Windows applications - thanks to its Connect capability. The Omni-font technology is complemented by a powerful self-learning feature. Readiris™ is available whenever you need to scan. Simply place a page in your scanner and click on the Readiris™ application. A dialog box opens: you can click *Scan* and let Readiris™ automatically choose the best settings for your paragraph or page. Recognised text is then ready to edit, reformat, print, and distribute. Readiris™ recognises tables of figures and recreates the table structure by assigning the figures to separate cells. Readiris™ works with the most popular scanners to quickly convert type-written, photocopied or faxed documents into formatted text. Readiris™ eliminates the time, expenses and errors of rekeying documents at a price everyone can afford.

Cardiris™
Business Card Organizer

Supports all European Formats

With Cardiris™ you will never lose a business card again. Cardiris™ is designed to scan and index any type of business card and create a database to file them either by name, company or some other categories. It improves the day-to-day life of business people, whose desks and pockets are usually crowded with business cards. Cardiris™ archives business cards in a few seconds with the capability to insert specific notes, references and important dates concerning the contact. Thanks to an advanced compression and display technique, the image on the screen has a quality comparable to the original card, which means that the original card can be discarded. Cardiris™ can then be used as an electronic Rolodex. The OCR process will automatically recognise the text on the card and will also identify the different fields (company name, first name, last name, city, phone, fax, etc...). Cardiris™ contains a powerful contact database and can be used with hand-held, sheetfed, flatbed or dedicated scanners.
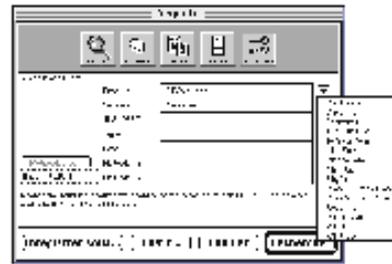

MarcoPolo™

The easiest way to get any document into your Macintosh

NEW VERSION 3.0

Use MarcoPolo™ to store and retrieve all your documents in the blink of an eye. No need to index your files: MarcoPolo™ has built-in optical character recognition and text indexing technology that takes care of it for you. You don't even need to learn a new query language to find documents later! Simply type in plain English to find what you need.

MarcoPolo™ indexes all kinds of documents created on your Macintosh: customer proposals, credit memos, magazine clippings, database reports, schedules, charts, graphics, invoices, corre-
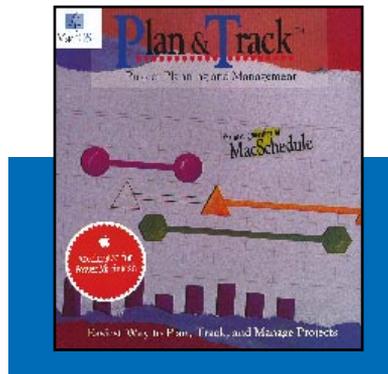

spondance and electronic mail messages. In addition, thanks to the built-in OCR technology, paper documents can be stored: important invoices, faxed or mailed letters, court documents and legal briefs, technical specifications, project proposals, etc.

All these documents can be filed and displayed on-screen together. MarcoPolo™ is an intelligent software that helps you to electronically store, retrieve and print all those odd bits of paper and information that clutter your life. MarcoPolo™ works with the most popular scanners to quickly convert typewritten, photocopied or faxed documents into usable text.

MacUser

★★★★★ **SVM/MAC**

FEATURES & BENEFITS

Reduce paper clutter
- scan paper documents (with all popular scanners)
- easily add keywords for classification and retrieval

Intelligent optical character recognition
- use the OCR feature to automatically convert your documents into editable text
- the electronic document looks the same as the paper original
- all text is indexed allowing documents to be searched and retrieved based on the information they contain

Automatically organize documents
- once documents are entered into MarcoPolo™, they are organized automatically by subject, content, originator, or archival date.

Fast search and retrieval
- MarcoPolo™ can search thousands of pages in just seconds, even over a network

Enhanced display at reduced sizes
- displays miniature documents that can be easily recognized.
- allows you to have large numbers of documents open on your desktop

Individual and workgroup use
- store your documents on your hard drive (for personal use) or on a server (for your workgroup)

Support any AFP compatible network
- MarcoPolo is designed so that any document center can be shared on an AFP compatible file server like AppleShare, FileShare, Tops, PacerShare, AlisaShare

SYSTEM REQUIREMENTS
- MarcoPolo™ requires System software 7.0 or later

Plan & Track™

The easiest way to plan, track and manage projects

Plan & Track™ helps you plan and manage any project. There's no faster or easier way to keep things on track and within budget. Based on standard Gantt charts, to plan you just list the various tasks in a project along the left side of the chart, set the calendar that appears along the top, then draw task bars that show the duration of the task as it corresponds to the calendar. It's that easy!

Freestanding lines, arrows and text can then be placed anywhere to annotate the plan. An integrated spreadsheet and graph let you tie quantitative data to the tasks in your plan. The Earned Value Analysis functions help you to calculate cost and plan variances.

CROSS PLATFORM
MACINTOSH • WINDOWS

the next generation of Mac Schedule

FEATURES & BENEFITS

Direct approach to project planning
- quickly plan projects, events and campaigns, then easily track progress
- work directly on the chart

Create presentation-quality project plans
- quality, full-colour charts can be printed or included in page-layout reports

Automatic calendar management
- create a calendar with scales such as quaterly, monthly, half-monthly, weekly, daily, or custom
- show fiscal years or numbers in the calendar

Integrated spreadsheet and graphing
- add estimated and actual costs with the project
- show graphics for maximum visual impact

Earned Value Analysis
- offer a simple method of relating value, cost and progress to give an overall indication of financial and schedule status

Multiple-page schedules
- use up to 8 x 8 pages to create large plans such as stripcharts or wallcharts

Hierarchical plan organization
- create multiple subchart layers that are all linked to your master plan

Symbols and task bar styles
- use the default symbols and task bar styles included, or create your own custom bars and symbols

Also available for Windows
- Plan & Track for Windows is file-level compatible with all files created with Plan & Track for Macintosh, and vice versa.

 I.R.I.S. 1996

Captivate™ Essential Graphics Utility

Screen capture, Image viewer & Multimedia Storage

Captivate™ is the first graphics utility package that handle all graphics, sounds, even QuickTime movies. Captivate includes three parts: Captivate Select™, Captivate View™ and Captivate Store™. With these powerful tools you can select and save any part of your screen. You can view, crop, comment and print graphics. You can organize, store and retrieve graphics, text, sounds and even QuickTime movies at any time, from within any application. Each Captivate™
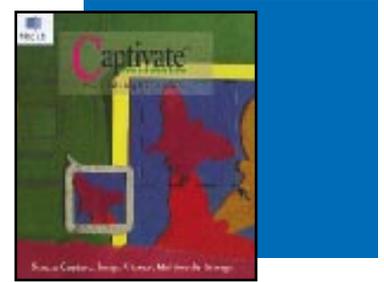

utility can be used on its own. Together they make an unbeatable team.

MarkUp™

Document Editing and Review

With MarkUp™ you can annotate any document no matter which Macintosh application created it. MarkUp™ lets one or more reviewers comment on an electronic document. MarkUp™ provides marks and tools to annotate, highlight, strike out or correct. It even has a voice annotation tool an supports QuickTime, so you can simply speak or attach a
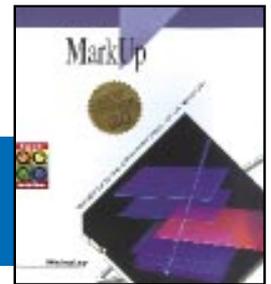

movie to convey your comment. When the review is completed, display comments from just one reviewer's overlay or all of them at once.

Phyla™ More powerful than relational databases

Database power that anyone can use

Phyla™ is an end-user, object-oriented database that requires no programming. A natural, intuitive design structure, combined with a simple drag-and-drop interface, enables you to produce real results within an hour.

Drag objects to relate them, design as many forms as you need and store the search and sort parameters for customized reports at the click of a button. Phyla is designed to work the way you think: when you need something, do it the way you think it should be done. Now you can create databases with a variety of related information, design and lay out custom database forms and perform complex searches, in an intuitive point-and-click manner. Now you have a database that gives you the
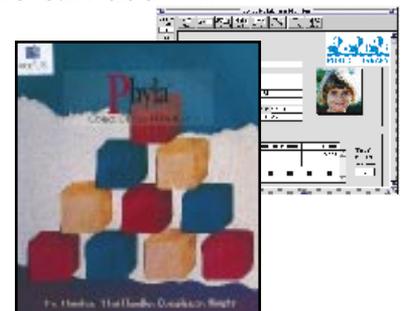

power to handle complex situations easily. Use one of the many included sample databases, or create your own custom database for sales and inventory, resource allocation, invoice/purchase order systems, personal tracking, equipment tracking, membership rosters, financial planning, estimating, reservations, collections, what if?, data analysis, campaigns and mailings.

VIP-C™ and VIP-BASIC™

The quickest way to create a Macintosh application in C or BASIC

Just released VERSION 2.0
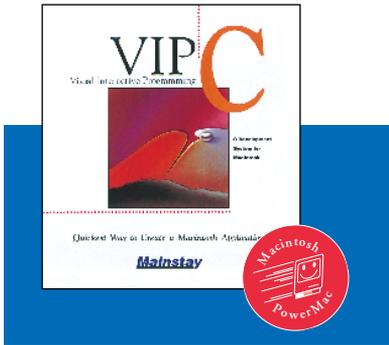

If you have been looking for a tool to create your own Macintosh applications, look no further. Both VIP-C™ and VIP-BASIC™ give anyone the ability to create their own Macintosh and native Power Macintosh applications. Choose your language and start programming.

If you already have a specific need in mind, these products will save you time and money. If you simply want to experiment, this is a great tool to let your imagination run wild. The VIP-C™ and VIP-BASIC™ revolutio-0nary integrated design, application framework, integrated resource editors, interface event dispatcher, powerful high-level functions, on-line access to all Mac Toolbox calls and intelligent debugger make it possible for anyone to create a 68x00 and native Power Macintosh applications. VIP-C™ and VIP-BASIC™ features prewritten prototypes of all the Macintosh Toolbox calls, high-level subprograms and resource editors that let you visually design and create windows, menus, dialogs, buttons, etc.

Automatically generated flowchart shows program structure and the location of currently selected code.

VIP functions are selected from a pop-up palette of control statements and function groups.

Variables are categorized in Windows. Changing local variabels to global ones is as easy as option-dragging from one window to another.

MacUser

★★★★ **SVM/MAC**
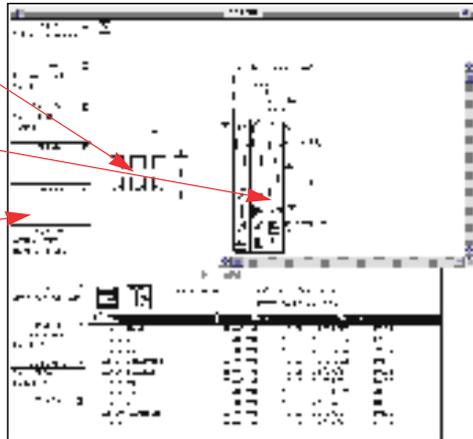

Multi-user databases-royalty free

Even better, complete database engines are now available for both VIP-C and VIP-BASIC. These database libraries give you the power to create royalty-free, commercial-quality, multi-user databases. VIP Database Manager (sold separately) has the built-in functionality of the CXBase Pro database engine. Considered by many to be the fastest database engine available today, CXBase Pro has become the cross-platform database development tool of choice. CXBase Pro provides all the functions needed to implement any kind of storage scheme, from flat-file systems to complex, multi-user relational databases.

VIP-BASIC™

SPECIAL OFFER

VIP-BASIC 2.0 converts standard BASIC code to ANSI C code

Formiris™

Optical Mark Reading Software

Call us for the latest FormIris Pro version

Formiris™ is the high-performance and cost effective software that reads and encodes check marks and multiple choice forms and answer sheets. Formiris™ is a simple, easy to use forms reading solution for reply cards, inventory reports, and all other forms that use check marks. Ideal for administration requests, marketing inquiries, job applications, internal inquiries, ...
