## Viewing a photo

Use the Run Viewer command from the View menu, or click on the Viewer button in the ribbon, to open a selected photo in a Viewer window. You can also double-click on a thumbnail.

If you want to open multiple photos simultaneously, select them with the Ctrl or Shift keys, or choose the Select All command from the File menu to open all the photos in one operation (depending on your system resources, you may not be able to open all the photos in a disc at the same time).

Each photo opens in its own Viewer window, at the resolution and data type you choose in the Preferences dialog box, or in the ribbon.

Please consult Viewer on-line help for more information.

## Saving a photo as an image

Use the Save As command from the File menu to save a photo as an image file. The PCD format is not recognized as an image file, so you need to specify an image file format to save your photo in and, if a compression option is available, whether or not to compress it.

1. Choose "Save As" to display the Save As dialog box.
2. From the Directories list box, choose the drive and directory to which you want to save the photo.
3. Select a format from the List Files of Type drop-down list box.
4. In the File Name text box type the name of your new image (up to eight characters). You do not need to enter the file extension.
5. Click OK to save the photo as an image.

## The CD Browser Ribbon

The ribbon at the top of the CD Browser window allows you to select which drive to use, as well as the resolution and the image data type for the photos opened in Viewer.

The changes you made here affects the settings in the Preferences dialog box.

Click on each option below for more information:

This list box lists the available CD-ROM drives on your system.

This list box lists the different resolutions you can choose to view a photo, from thumbnail to full size. Every photo in your photo CD contains five different image resolution. You can select a resolution to open and view the image in the Viewer or the Image Editor application.

This list box lists the data type you can choose to view the photos: Grayscale, Indexed 256-Color, or RGB True Color.

## **Run Viewer**

Opens the Viewer program, where you can view and edit the selected photo.

If you want to open multiple photos simultaneously, select them with the Ctrl or Shift keys, or choose the Select All command from the File menu to open all the photos in one operation (depending on your system resources, you may not be able to open all the photos in a disc at the same time).

Each photo opens in its own Viewer window, at the resolution and data type you choose in the Preferences dialog box, or in the ribbon.

Please consult Viewer on-line help for more information.

Filenames can be entered with or without a file extension. If no extension is entered, the extension selected in the List of Files Type drop-down list box is automatically added.

This line informs you if the photo has a specific copyright. Most photos on a CD have copyright protection belonging to the photographer and/or the manufacturer.

If the copyright line is empty, you cannot assume that a photo is without copyright.

The information displayed here can include the name of the photographer, the name of the developing company, and the name of the bureau.

When you click on this button, Windows Notepad opens a file containing relevant Copyright information for the photos in your CD.

Pay particular attention to this information to determine the extent to which you can use the photos.

Every photo in your photo CD contains five different image resolution. You can select a resolution to open and view the image in the Viewer or the Image Editor application.

## What is the ADK?

The Ulead ADK is a set of sample programs with accompanying documentation. The documentation shows the application programming interface (API) calls supplied by Album and other Ulead programs. Other applications can call these APIs for access to Ulead program features such as reading and writing image data file.

The ADK also shows sample programs for writing File Input/Output (FIO) and Media Input/Output (MIO) filters so Ulead products can access or catalog foreign file formats.

## What can you do with the ADK?

With ADK you can do the following:

- ↕ Find existing IAC (Inter Application Compatible protocol) compatible programs to take advantage of existing MIO or FIO filters
- ↕ Allow users to drag and drop files from your application into Album as thumbnails, and vice versa
- ↕ Register your application as an IAC compatible program: you can insert thumbnails into albums when saving files and your application will be shown along with other Ulead products in the Switch menu.
- ↕ Create albums or insert thumbnails to albums for cataloging and browsing purposes.
- ↕ Access a file format using existing FIO filters
- ↕ Do file conversion using existing FIO filters.
- ↕ Create new FIO filters for reading and writing specific multimedia file formats
- ↕ Create new MIO filters for generating thumbnails and for cataloging specific multimedia file formats

## Technical Support

If you have any questions or comments about this or any other Ulead products, we want to hear from you. Ulead has three offices to help you:

Before you call, please prepare the following information so we can offer you the best possible support:

- ☒ The program name and serial number
- ☒ Nature of the problem
- ☒ Any error messages or dialog boxes that appear when the problem occurs
- ☒ System information including the type CPU, your operating system, and any other programs running at the time the problem occurs.

If you decide to write or fax us, add printouts of the following:

- ☒ AUTOEXEC.BAT
- ☒ CONFIG.SYS
- ☒ WIN.INI
- ☒ ULEAD.INI

**Note:** You can obtain copies of these files quickly by running SYSEDIT.EXE in your Windows program directory.
