1.2   What Is Move2.0

What Is This

Move is a CLI-Command that copies a file somewhere other and deletes the

source. It just moves files like all the other movers do. But wait, some-

thing is different: Move also moves the icon of the file if some exists!

I can`t find any mover doing this, exept DOpus of course.

1.3   How To Install Move2.0

How To Install

The answer is easy: Just copy Move2.0 to your C directory!

1.4   How To Use Move2.0

How To Use

Give the source and the target after the command like this:

Move2.0 drive0:dir0/file drive1:dir1/dir2

And you can also give the argument help after the command and a text how

to use Move2.0 will be displayed:

Move2.0 help

1.5   Authors Of Move2.0

Authors

First author for Version 1.4 is CDP. He`s a friend of mine,so he alowed me

to make a better version of Move he created. So, now it`s finished after a

long time (f**k, how to use if better?). But there will surely another one

follow, which asks before overwriting the target...

The author of Version is Zito/Zetec. Contact for any reason like scene swap

and so on!!!

1.6   Move2.0-History

History

·V1.4 by CDP on 23.12.1994 copies files and their icons and deletes

the source (single files only!)

·V2.0 by Zito/Zetec on 17.08.1998 copies files and their icons and deletes

the source (single files only!)

Optimized and new designed.
