

This is the non-scrolling region

This is the body of the first topic. Notice how the non-scrolling region button changes on the toolbar when you toggle between this topic, and one without a non-scrolling [region](#).

Notice the keyword 'non-scrolling' has been added to the list of keywords. Look at the online help to see how I did it :-)

This is topic two

I will include a bitmap with this one:

and the following hidden topic will popup next: Hidden Topic

This topic will be missing from the final Contents Tree in your help file. Ideal for composing popup topics to use e.g in context-sensitive help.

Notice how this child's parent topic cannot have it's text edited. Headers are placeholders only. Nice for structuring the Contents of your help file.
