Contents

Preface	ix
----------------------	----

Section I: Adding Dynamic Content to Your Web

1. Many Paths to Extending the Server	3
Technologies Supported by WebSite Pro	4
Weighing Advantages	7
Tackling Common Tasks	9
Resources	12
2. Foundations for Adding Dynamic Content	13
HTTP Essentials	13
Providing Database Connectivity	20

Section II: Server-Side Scripting Technologies

3. Simple Dynamic Pages with Server-Side Includes	29
What Are Server-Side Includes?	29
Activating Server-Side Includes	31
Creating a Page Counter	31
Directive Reference	33
4. Extending HTML with iHTML	45
Installing iHTML	47
Understanding iHTML	49
Scripting with iHTML	57
Using the Enterprise Manager	78
5. Using the iHTML Merchant	83
Getting Started with iHTML Merchant	84
How the iHTML Merchant Works	86
Using the Merchant Administration Interface	109

6. HTML Variables, Tags, and Error Codes	115
iHTML Environment Variables	115
iHTML Tags	117
iHTML Error Codes	203
7. Server-Side Scripting with Active Server Pages	205
Activating WebSite Pro's ASP Support	206
How the Server Handles ASP	207
Creating ASP Files	208
Configuring ASP with Server Properties	212
Getting Essential Settings Right	215
Where to Learn More About ASP	217

Section III: The Common Gateway Interface

8. What Is the Common Gateway Interface?	221
How CGI Works	221
CGI Programming Basics	223
Input and Output Spooling	225
Where to Put CGI Files	225
CGI Programming Techniques	227
9. Developing Windows CGI Applications with Visual Basic	235
Working with Windows Applications	236
How Windows CGI Works	241
The Windows CGI Framework for Visual Basic	243
Debugging Techniques	248
A CGI "Hello, World" Example	250
The Sample Guest Book Program	254
A Database CGI Example	259
Common Programming Tasks	276
10. Developing Windows CGI Applications with C++ and MFC	281
Reading CGI Data	281
Generating the Response	283
Creating the CGI Application	283
Testing the Program	293
Adding Functionality	294
Error Handling	298
Summary	301

11. Developing CGI Applications with Standard CGI	303
Configuring Your System for Standard CGI	304
Getting Data in Standard CGI	305
Perl-Based CGI	307
Shell-Based CGI Programs	314

Section IV: The WebSite Application Programming Interface

12. What Is the WebSite Pro Application Programming Interface?	319
Caveats and Guidelines	323
General Information on Using WSAPI	324
Working with the WSAPI Extension Types	332
13. Developing WSAPI Extensions	345
Form Dump Generator Extension	346
Cookie Displayer WSAPI Generator Extension	349
Cookie-Giver Preprocessor Extension	351
Page Count Postprocessor Extension	353
Not Found Error Handler Extension	363
Referer Logger Extension	364
OLE In-Process Server Adapter	368
14. WSAPI Functions Reference	375
WSAPI Support Functions	375
Transaction Context Block	416

Section V: The WebSite Java Servlet Software Development Kit

15. Programming WebSite Pro with Java	425
Preparing to Use the SDK	426
How Java Finds Classes	429
How WebSite Pro Runs Java Programs	432
Building a WebSite Pro Servlet	433
Debugging Environment for Development	438
Using Java's Built-In Security	439
Where to Go for Help	439
Getting Essential Settings Right	440
16. WebSite.Servlet API Class Reference	443
The Client Class	443
The Cookie Class	449

The Form Class	452
The FormFile Class	454
The Request Class	456
The Response Class	461
The Server Class	469
The Servlet Class	477
The Session Class	479
The ServletException Class	482
The UserException Class	483

Section VI: Appendixes

A. printf and strftime Escape Characters and Math Operators	487
printf Escape Characters	487
strftime Escape Characters	488
Math Operators	489
B. WebSite Pro Registry Keys	491
Server Root Key	492
WebFind	507
WebView	509
iHTML	510
C. Troubleshooting Tips	513
Troubleshooting Guidelines	514
Common Problems and Solutions	515
Error Messages	524
Contacting Technical Support	525
Glossary	529
Index	533
