Database Object

The **Database Object** provides properties to get information about the database accessed by a report.

Properties

Application - Returns a reference to the **Application** Object this object is associated with. Read only.

Parameters - Returns **DatabaseParameters** Collection which specifies the database parameters used in the report. Read only.

Parent - Reference to the Parent object (**Report** Object). Read only.

Report - Reference to **Report** Object. Read only.

Tables - Returns **DatabaseTables** Collection which specifies the database objects used in the report (i.e., an Access report may contain a query or SQL Server report may be based on a stored procedure - if so, they will be returned as part of this collection along with the database table used in the report). Read only.
