

DatabaseParameter Object

The **DatabaseParameter** Object specifies a stored procedure in a SQL database or an Access parameterized query.

Properties

Application - Returns a reference to the **Application** Object this object is associated with. Read only.

Name - Returns the name of the parameter from the parameterized query/stored procedure that the report was created from. Read only.

Parent - Reference to the Parent object (**Database**). Read only.

Report - Reference to **Report** Object. Read only.

Type - Returns CRFieldValueType (see table below) which specifies the "type" of value found in the field. Read only.

crBitmapField	17
crBlobField	15
crBooleanField	9
crChartField	21
crCurrencyField	8
crDateField	10
crDateTimeField	16
crIconField	18
crInt16sField	3
crInt16uField	4
crInt32sField	5
crInt32uField	6
crInt8sField	1
crInt8uField	2
crNumberField	7
crOleField	20
crPersistentMemoField	14
crPictureField	19
crStringField	12
crTimeField	11
crTransientMemoField	13
crUnknownField	22

Value - Returns/Sets the value for a database parameter as a string (i.e., when you are setting a numeric parameter you would use: DatabaseParameter.Value = "5"). Read/Write.
