

## DatabaseParameters Collection

The **DatabaseParameters** Collection is a collection of database parameter objects. A DatabaseParameter object exists in the collection for every stored procedure parameter accessed by the report. Access a specific **DatabaseParameter** Objects in the collection using the Item property.

## Properties

**Application** - Returns a reference to the **Application** Object this object is associated with. Read only.

**Count** - Specifies the number of database parameters in the collection. Read only.

**Item** - Returns **DatabaseParameter** Object. Item has an index parameter that is a numeric, 1-based index (i.e., Item (1)). The items in the collection are indexed in the order they were added to the report. Read only.

**Parent** - Reference to the Parent object (**Database**). Read only.

**Report** - Reference to **Report** Object. Read only.

## Remarks

Instead of using the Item property as shown, you can reference a parameter directly, for example, DatabaseParameters(1).
