

## FieldValue Object (32-bit only)

The **FieldValue** Object is only available through the **Window** Object event **DrillOnDetail** used in Visual Basic 5.0. When a user drill down on a Detail record value, all fields for that record are stored in an array of FieldValue objects that is returned in the FieldValues parameter of the DrillOnDetail event.

### Properties

**Application** - Returns a reference to the **Application** Object this object is associated with. Read only.

**Name** - Returns the name of the field. Read only.

**Parent** - Reference to the Parent object (**Report** Object). Read only.

**Report** - Reference to **Report** Object. Read only.

**Value** - Returns the data contained in the field. Read only.
