

FormulaFieldDefinitions Collection

The **FormulaFieldDefinitions** Collection is a collection of named formulas in the report. Access a specific **FormulaFieldDefinition** Object in the collection using the Item property.

Properties

Application - Returns a reference to the Application Object this object is associated with. Read only.

Count - Returns the number of formula field definitions in the collection. Read only.

Item - Returns FormulaFieldDefinition Object. Item has an index parameter that can be either a string reference to the formula field or a numeric, 1-based index. When a numeric index is used, the items in the collection are indexed in the order they were added to the report. Read only.

Parent - Reference to the Parent object (Report Object). Read only.

Report - Reference to Report Object. Read only.

Remarks

Instead of using the Item property as shown, you can reference a formula field directly, for example, FormulaFieldDefinitions("ExampleFormula").
