Page Object (32-bit only)

The **Page** Object is part of the Page Engine. Use the Page Engine when designing web sites using Active Server Pages, the Crystal Report Engine Automation Server, and the Crystal Design-Time ActiveX Control. Unless you are experienced with the Crystal Report Engine Object Library, you should allow the Crystal Design-Time ActiveX Control to generate VBScript code in your Active Server Pages that controls the Page Engine objects.

The Page Engine generates pages of a report on the web server and sends the pages to client web browsers as they are requested. For example, when a user first requests a report, only the first page is sent to the web browser. If the user pages forward or backward in the report, or requests a specific page, only that page is sent. This limits the resources required by the web server and reduces download time for the client browser. A Page Object is a single generated page that is sent to the browser.

Properties

Application - Returns a reference to the Application Object this object is associated with. Read only.

IsLastPage - Returns Boolean value indicating whether the page generated is the last page of the report. Read only.

PageNumber - Returns the page number of the page generated. Read only.

Parent - Reference to the Parent object (PageGenerator Object). Read only.

Report - Reference to Report Object. Read only.
