PageGenerator Object (32-bit only)

The **PageGenerator** Object is part of the Page Engine. Use the Page Engine when designing web sites using Active Server Pages, the Crystal Report Engine Automation Server, and the Crystal Design-Time ActiveX Control. Unless you are experienced with the Crystal Report Engine Object Library, you should allow the Crystal Design-Time ActiveX Control to generate VBScript code in your Active Server Pages that controls the Page Engine objects.

The Page Engine generates pages of a report on the web server and sends the pages to client web browsers as they are requested. For example, when a user first requests a report, only the first page is sent to the web browser. If the user pages forward or backward in the report, or requests a specific page, only that page is sent. This limits the resources required by the web server and reduces download time for the client browser. A PageGenerator object generates **Page** Objects as they are requested and allows options for manipulating the report as a whole.

Properties

    Application - Returns a reference to the Application Object this object is associated with. Read only.

    GroupPath - Returns the GroupPath parameter set by CreatePageGenerator. Read only.

    Pages - Returns Pages collection (32-bit only) which is a collection of pages in the report. Read only.

    Parent - Reference to the Parent object (PageEngine Object). Read only.

    Report - Reference to Report Object. Read only.
