Section Object

Report areas contain at least one section. The **Section** Object includes properties for accessing information regarding a section of your report. This object holds on to a report object, then releases the report object when it is destroyed.

Properties

Application - Returns a reference to the Application Object this object is associated with. Read only.

Height - Returns/Sets the height of the section in twips. Read/Write.

Number - Returns the number associated with the section in the area (i.e., if the first section in an area, the number returned is 1). Read only.

Options - Returns SectionOptions Object. Read only.

Parent - Reference to the Parent object (Area Object). Read only.

Report - Reference to Report Object. Read only.

ReportObjects - Returns ReportObjects Collection. A heterogeneous collection of report objects. Read only.

Width - Returns the width of the section in twips. Read only.
