

Sections Collection

Sections can come from either the **Report** Object or **Area** Object. The **Sections** Collection is a collection of section objects. Access a specific Section Object in the collection using the Item property.

- When from the Report Object, the sections object will contain all the sections in the report.
- When from the Area Object, the sections object will contain all the sections in the area only.

Properties

Application - Returns a reference to the Application Object this object is associated with. Read only.

Count - Returns the number of section in the collection. Read only.

Item - Returns Section Object. Item has an index parameter that can be either a string reference to the area section (i.e., for areas with one section: "RH", "PH", "GHn", "D", "GFn", "PF", or "RF") or a numeric, 1-based index (i.e., Item (1)) for the Report Header area. Numeric index for sections starts at 1 for first section in the area/report and continues in order of appearance. If the area has multiple sections, they are represented using a lowercase letter (i.e., "Da", "Db", etc.). Read only.

Parent - Reference to the Parent object (Report Object or Area Object). Read only

Report - Reference to Report Object. Read only.

Remarks

Instead of using the Item property as shown, you can reference a section directly, for example, Sections ("Da").
