OpenReport Method (Application Object)

The **OpenReport** method opens an existing report file, creating an instance of the Report object. Through the **Report** Object, you can change formatting, formulas, selection formulas, and sort fields for the report, then print, preview, or export the report. This method corresponds to PEOpenPrintJob of the Crystal Report Engine API.

Syntax

```
Dim rep As Report
Set rep = app.OpenReport(ReportFilePath)
```

Parameters

ReportFilePath - Specifies a string value indicating the file name and path of the report you want to open.

Returns

Returns an instance of the **Report** Object if the report was successfully opened. Returns 0 if the report file does not exist or if an error occurs.
