

SearchButtonClicked Event (Window Object)

The **SearchButtonClicked** event occurs when the Search button is clicked.

Syntax

```
Event SearchButtonClicked (SearchString As String,  
useDefault As Boolean)
```

Parameters

- SearchString** Specifies the string entered by the user that will be searched for.
- useDefault** Specifies Boolean value indicating whether the default settings should be used. Assign useDefault = FALSE if not using default behavior defined in CPEAUT (i.e., if you do not the search for the string to occur).

Remarks

Before enabling this event, the HasSearchButton property of the **PrintWindowOptions** Object must be set to TRUE. This event is enabled using the PrintWindowButtonEnabled property of the **EventInfo** Object obtained through the EventInfo property of the **Report** Object.
