

# Macintosh IIsi NuBus Adapter Card

## Overview

The Apple® Macintosh® IIsi NuBus<sup>®</sup> Adapter Card offers an excellent enhancement for Macintosh IIsi personal computer users who want the highest possible system performance and expandability.

First, the Macintosh IIsi NuBus Adapter Card lets you add one of hundreds of high-performance NuBus expansion cards that are available for networking, graphics, and other uses.

In addition, the Macintosh IIsi NuBus Adapter Card includes the Motorola 68882 floating-point math coprocessor. It greatly improves the speed with which the computer can perform mathematical calculations generated by applications such as CAD/CAM, sophisticated graphics packages, spreadsheets, and databases.

## Features

- NuBus expansion slot
- 68882 floating-point math coprocessor
- User-installable

## Benefits

- Lets you increase system capabilities by adding a NuBus expansion card, such as a video card for photographic color or a two-page monitor, a special memory card, a communications card, or a digital signal processing card.
- Greatly improves the speed with which the computer can perform mathematical calculations generated by applications such as CAD/CAM, sophisticated graphics packages, spreadsheets, and databases.
- Installs easily in minutes.

# Macintosh IIx NuBus Adapter Card

---

**System Requirements**      The Macintosh IIx NuBus Adapter Card can be used only with a Macintosh IIx personal computer.
