

Macintosh Portable Backlight Display Upgrade

Overview

The Apple[®] Macintosh[®] Portable Backlight Display Upgrade Kit lets you use your Macintosh Portable personal computer in a wide variety of lighting situations, from the bright light of an office to the low light of a hotel room. Designed to replace your existing display, it offers the same high-quality resolution, 640 by 400 pixels, but enables you to adjust the brightness for whatever environment you're working in.

The Macintosh Portable Backlight Display Upgrade Kit provides this greater flexibility because it uses an advanced 10-inch (25-cm), flat-panel, active-matrix liquid crystal display (LCD) with cold-cathode fluorescent lighting backlight technology.

Features

- Adjustable backlighting
- 640 horizontal pixels by 400 vertical lines
- Flat, 10-inch (25-cm), backlit, active-matrix liquid crystal display

Benefits

- Lets you adjust the brightness of the display to see it clearly in a wide variety of lighting situations.
- Lets you view the full width of a letter-size page so you can work with documents more easily.
- Provides sharp display of text and graphics.
- Lets you see the screen clearly from almost any angle.
