# DataAccessLanguageServerforVAXV/MS

### Overview

The Data Access Language (DAL) Server for VAX VMS is an etworking software product that provides DAL access to files and databases on a VAX VMS host system. Running on the VAX VMS host, the Data Access Language Server works cooperatively with personal computer applications that support Data Access Language, such as spread sheets, databases, and query to ols on Apple Macintosh computers.

AtotalDataAccessLanguage connectivitysolutionforVAXVIVIS includes a client personal computer running an application with embeddedDataAccessLanguage support, and a VAXVIVIS host with the DataAccessLanguage Server. The DALS erverreceives requests from the personal computer application, carries the mouton the VAX, and sends the desired databack to the application for local processing.

The Data Access Language Serverfor VAXVIVIS provides uniform support for Data Access Language based applications, through a variety of network configurations and VAXVIVIS data managements of tware. It works with existing VAXVIVIS data bases, operating understandard VIVIS and data bases ecurity. As a result, Macintosh computer users receive seamless, transparent access to the VAX data they are authorized to access.

## **Features**

# **Benefits**

Serveroperates as a user process under standard VMS username/password security	<ul> <li>Maintains the security and integrity of VAX/</li> <li>VMS and the database management system.</li> <li>Eliminates the need for new system administration procedures on the VAX.</li> </ul>
· UniformsupportforDataAccessLanguage dients	Allows one server to support all Macintosh computers running Data Access Language-compatible applications.
- UniformconcurrentsupportforVAX databases	<ul> <li>Insulatespersonal computer applications from the complexities of the database being used.</li> <li>Supports multivendor environments.</li> </ul>
StandardVAXVIVISinstallationprocedures	Makes installation quick and easy.     Allows the user to continue other work while the Data Access Language Server performs a connectivity request.
· Asynchronousoperation	Returnsprogram control to the Macintosh so the user can perform other tasks while the Data Access Languages erver carries out the requested operation on the host.
· Incremental compiler implementation	· Reduces the dient system processing load.
· Tracefacility	- Facilitatesdebuggingandsystemtuning.
Interactive utilityfortesting Data Access Languageprogramstatements	IDALensuresproperconnection, installation, and operation of host server.
· Storedprocedures	<ul> <li>Minimizes network traffic by storing commonly located procedures on the host, where they can be shared.</li> </ul>
· Sampletables	Makesdevelopingandtesting applicationseasier.
<ul> <li>Widerangeofcommercialapplicationswith DataAccessLanguageconnectivityavailable today</li> </ul>	Providesspreadsheet, querytool, and mappingtoolusers with seamless host data integration with no programming effort.

#### System Requirements

Tousethe Data Access Language Server for VAXVVMS, you need the following:

- Hostenvironment: VAXVVMS version 5.1 (or later)
- Macintosh computer clients running Data Access Languagecompatible applications
- · One or more of the supported databasemanagements ystems
- Theappropriate networking hardware and software

#### Product Details

#### Database Support

- Informixversion 2.1 (or later)
- Ingresversion 6.1 (or later)
- Oracleversion 5.1.22 (or later)
- Oracleversion 6.0
- Rdb/SQLversion3.1 (orlater)
- SybaseSQLServerversion3.0 (or later)

The Data Access Language Server provides standard database naming, data types, system catalog structure, error codes, and buffer management.

#### ClientSupport

 Uniform support for any application developed with Data Access Language Developer's Toolkit for the Macintoshusing a supported network

### Network Support

- Asynchronous direct and dialupconnections
- Supportforthe Apple Talk® networksystem (requires Apple Talkfor VMS version 2.0.6 or later for Phase I and version 2.1 for Phase II), which is supplied with Data Access Language Server for VAXVMS.

### Asynchronous Communications

- Transmissionspeed:
   300to 19,200 baud
- Characterlength:

7or8databits;1or2stopbits

- · Parity: Odd, even, or none
- Handshake
- -XONXOFFandnone
- -Modemanddirect connections
- -Log-onsequencespecification
- Protocol
- -Error-correcting(16-bitCRC)
- -Datacompression
- -Binarydatatransparency

### Resource Usage

- 1 megabyteofdiskstorage
- Properusage verified by test program
- Onesharable, reentrant
   200K-300K process shared by all attached Macintoshapplications

### DataAccessLanguageServerforVAXVVMS

#### Language Specifications

DALisa complete language for describing connectivity tasks. The Data Access Language consists of these statement groups:

 Hostconnectionstatements, whichestablishandterminate a connection to a host system in the network, providing concurrent accesstomultiple hosts running DataAccessLanguageServers

- Data manipulation statements, which offer complete ANSI standardlevel 1, SQL-based data access to host databases
- Program structure statements, which support testing, looping,

and procedure calls within a Data AccessLanguage program

 Output statements, which generateoutput messages from the Data Access Language program; these messages are processed by the client application

### Ordering Information

Toorderthe Data Access Language Serverfor VAXVMS.contact: Apple Programmers and Developers Association (APDA<sup>§</sup>) Apple Computer, Inc. 20525 Mariani Avenue, M/S33G Cupertino, CA95014-6299
