# LANSTARAppleTalkNetwork

### Overview

Information--therightinformation in the hands of the right peopleattherighttime--is crucialtoacompany'ssuccess. Theintroductionofthe Apple® Macintosh®personalcomputer broughtnewpowerandeaseof usetothetaskofpersonalinformationmanagement. The original AppleTalk® PersonalNetwork extendedthesesamebenefitsto informationsharingamongsmall workgroups.Now,theLANSTAR AppleTalkNetworkmultipliesthe speedandrangeofAppleTalkto increase productivity within large workgroupsandevenentire companies.

LANSTARAppleTalkcanprovidefilesharing, printspooling, electronicmail.andotherservices tomorethan 1.300 users--at speedssofast, the difference betweenlocalandremoteaccess. maybevirtuallytransparent. Yetit costslessthancomparablenetworks.becauseinstallationis doneusingstandardtelephone wiring; in most cases, no additionalwiringwillberequired. Setupandreconfigurationareas easyasaddinguserstoyour telephonesystem.LANSTAR AppleTalkoffershigh-performancenetworking at an affordablecost.

Allyournormal Macintosh II Apple Talkapplications will run on LANSTARApple Talk-onlyfaster. Yourcurrent Apple Talkusers won't even have to learn to use a new network-just hook up the system, and they're ready to increase their productivity.

LANSTARAppleTalk.ltcombinesthepowerofApplepersonal computersandNorthemTelecom telecommunicationsproductsto bringfast,cost-effectiveinformationsharingandcommunications toyourcompany.

# **Features**

## **Benefits**

· Capacityofupto 1,344 users, as far as three- quarters of a mile apart	<ul> <li>Provides a one-network solution for more effective communications.</li> <li>Simplifies sharing of information among multiple work groups—or even your entire company.</li> </ul>
Standardtelephone (unshieldedtwisted- pair) wiring	Savesoninstallationand     modification costsjustpluga Macintosh II     into the phone jack,andit's readytouse.     Usesfamiliar, readily available technology.
40Mbps(megabitspersecond)bus; 2.56Mbpstoeachdesktop	Offersfastaccesstoallfilesandserviceson thenetwork.     Dedicatesalarge-bandwidthchanneltoeach user, so individual response time is minimally affected under heavy usage.     Handlesheavy loads with minimal degradation in service.
· Starconfiguration	Provideshigh reliability, because problems at one node don't affect other users.
· FullAppleTalkcompatibility	Offershigherperformancethanstandard     AppleTalk, without additional learning time.
Standard Macintosh II Nu Businterface card	<ul> <li>LinksMacintoshII systemstothenetwork quicklyandeasily.</li> <li>Requires no user configuration; no DIP switches or interrupts to set, even if your system has multiple cards.</li> </ul>
Apple LaserWriter®printersupport	AllowssharedaccesstoaLaserWriterprinter connected to a Macintosh II.
· OptionalLANSTARAppleTalkBridge software*	LinksAppleTalkPersonalNetworksto     LANSTARAppleTalk     AllowsyoutobringotherMacintoshsystems     andMS-DOScomputersontothenetwork.**
· Fastdocumentspooling.	Freesyourcomputerforotherworkwhile your files print.**
LANSTARPCompatibility.	AllowsyoutorunLANSTARPC simultaneouslyoffthesameMeridianLANSTAR system.
· NorthemTelecomdesign	Incorporatestime-testedfeaturesforease of administration, system reliability, and security.
Diagnosticsoftware included	Simplifiestroubleshooting.     Indudesbothuser-andadministrator-level diagnostics.

#### Product Details

System Configuration
The intelligence of the LANSTAR
Apple Talk Network is driven from
one central controller: the
Northem Telecom Meridian
LANSTAR system. Meridian
LANSTAR systems are available in
configurations that support as
manyas 1,344 users.

Standard node configuration includes a Macintosh II work station with a LANSTAR Interface Cardfor the Macintosh II, an available port on the LANSTAR system, and two twisted-pair telephone lines to connect the computer to the system. The LANSTAR Interface Card provides a dedicated 2.56 Mbps connection.

OtherMacintoshsystems, including the Macintosh Plus and Macintosh SE, can be used by connecting them to an Apple-Talk Personal Network that's bridged to a LANSTARApple Talk Network. The bridge is provided by LANSTARApple Talk Bridge software running in the background on a Macintosh II. MS-DOS systems can be linked to LANSTARApple Talk in the same manner.

The LANSTAR Apple Talk Bridge also offers all network users access to non-NuBusperipherals (such as dedicated fileservers). (NuBus peripherals have direct access to LANSTAR Apple Talk through a Macintosh II.) See the LANSTAR Apple Talk Bridge data sheet for further details.

Nobridge is necessary to use an Apple Laser Writer printer on LANSTAR Apple Talk Anordinary Apple Talk cable can connect the Laser Writer to a Macintosh II for access by all network users.

LANSTARAppleTalkisdesigned for use with ordinary unshielded twisted-pairtelephone wiring. Sincemostmodern commercial buildingsalready have extraphone linesateach desk, LANSTAR AppleTalk usually requires no wiring installation.

LANSTAR Interface Card for the Macintosh II
The LANSTAR Interface Card for the Macintosh II is a NuBus card that connects your Macintosh II to a LANSTAR Apple Talk Network. The computer can then be used just as it would with an Apple Talk Personal Network, except that access speed for remote files and

Since NuBusinterfacecards automatically identify themselves to the system, users don't have to worry about putting a cardina particular slot, or setting DIP switches or priorities. This allows easy setup and configuration and reduces network support needed by users.

LANSTAR Apple Talk Diagnostic Tool
The LANSTAR Apple Talk
Diagnostic Tool is a software application that aids in faster and easier network in stallation, as well as easier troubleshooting of the LANSTAR Apple Talk Network.

Thisproductisan excellent process, because it gives the administrator a way to verify proper installation. It will also facilitate locating any problems that might occur.

The Diagnostic Tool includes a workstation self-test mode that can be used by individual users. Its administrator-level tests include the ability to test any designated nodes, track network status and usage, and locate and identify faults. It even suggests possible solutions to any problems it finds.

#### System Requirements

TousetheLANSTARAppleTalk Network, you will need the following:

- ANorthemTelecomMeridian LANSTAR system configured for the necessary number of users (one available LANLINK port per user)
- Userworkstations, consisting of --AMacintosh II personal computer
- -LANSTAR Interface Cardforthe Macintosh II

serviceswillbefaster.

- -LANLINK Interface Cable (RJ11 to RJ11)
- -Astandard twisted-pairwiring connection to the LANSTAR system -LANSTAR Apple Talk Network software

TolinkaLANSTARApple-Talk NetworkwithanAppleTalk PersonalNetwork,youwillalso need:

- AMacintosh Il personal computer with the specified workstation configuration
- LANSTARAppleTalkBridge software (Sincethebridgesoftware runs in the background, this system can also be used as an individual workstation.)

### LANSTARAppleTalkNetwork

#### System Requirements

LANSTAR AppleTalk Network

- Topology:Star
- Wiring: Unshieldedtwisted-pair (22-to26-gaugewire)
- Signalingspeed: 2.56 Mbpstoa 40Mbpsbackbone
- Maximumlength: 2,000 feet to eachpointofthestar(workstations can be up to 4,000 feet apart)
- Nodeidentification: Selfconfiguring (except for the
- LANSTARAppleTalkBridge)
- Applications supported: All Macintosh II Apple Talk applications
- Pollingmechanism: Highspeed, perfect-scheduling
- Backbone: Shared 40 Mbps; optionalredundantbackbone

LANSTAR Interface Card for the Macintosh II

LANSTAR protocol support --The full AppleTalk protocol stack,indudingATP,NBP,ZIP,EP, PAP,andRTM

- - ALAP, modified to support twisted-pairmedia
- - DDP, extended to support the LANSTARAppleTalkBridge
- Memory:2kilobytesofRAM
- Interfaces:TwoRJ11jacks(one isto "passthrough" the telephone)
- Configuration: NuBus Maximumpowerconsumption:4.8 watts
- Size:4in.(10.2cm)highby 11.75in.(29.9cm)long
- Operating temperature: 50° to 95°F(10°to35°C)
- MeridianLANSTARSystem (ModelPTE-S)

**Electrical requirements** 

- Linevoltage:92to130voltsAC (184to 260 volts A Coptional)
- - Frequency: 47 to 440 hertz
- - Powerconsumption:300watts maximumeachpowersupply;410 wattsmaximumfullyloadedsystem

Environmental requirements

- -- Operating temperature: 50° to 99°F(10°to37°C)
- - Relative humidity: 5% to 95% noncondensing
- Regulatoryapprovals:UL;FCC Part15.ClassB

Size and weight

- - Height: 29.5 in. (74.9 cm)
- - Width: 23.3in. (59.2cm)
- - Depth: 25.5in. (64.8cm)
- - Weight: 215lb. (97.5kg) with one power supply;242lb.(109.8 kg)withtwo

LANSTAR AppleTalk Diagnostic

- Driverinterface: NuBus
- Protocolinterface: DDP
- Stand-aloneapplication; standard/Macintoshuserinterface Loop back.echo.local-nodetest. remote-nodetest

LANSTAR AppleTalk Network Ordering Information

ToordertheLANSTARAppleTalk Network, please call toll-free, 800-328-8800 (in the United States) or 800-361-7950 (in Canada).

Macintosh IILANSTAR Workstation Hardware Northern Telecom Order No. NTZR47AA

Withyourorder, you'll receive: LANSTAR Interface Cardforthe

- Macintosh II
- Twisted-pairmodularlinecord (with RJ11 plugs)

Software Northern Telecom Order No. NTZR484A

Withyourorder, you'll receive:

- 3.5-inchdiskincluding:
- - LANSTARAppleTalkWorkstationsoftware
- - LANSTAR Apple Talk File/Print-Server Driver
- - LANSTARAppleTalkDiagnostic Tool
- - Installer and Installer Scripts
- - Systemsoftware
