Power Macintosh G3.
The ultimate open-door policy.

Easy access
The side panel swings open effortlessly, giving you instant access to system components.
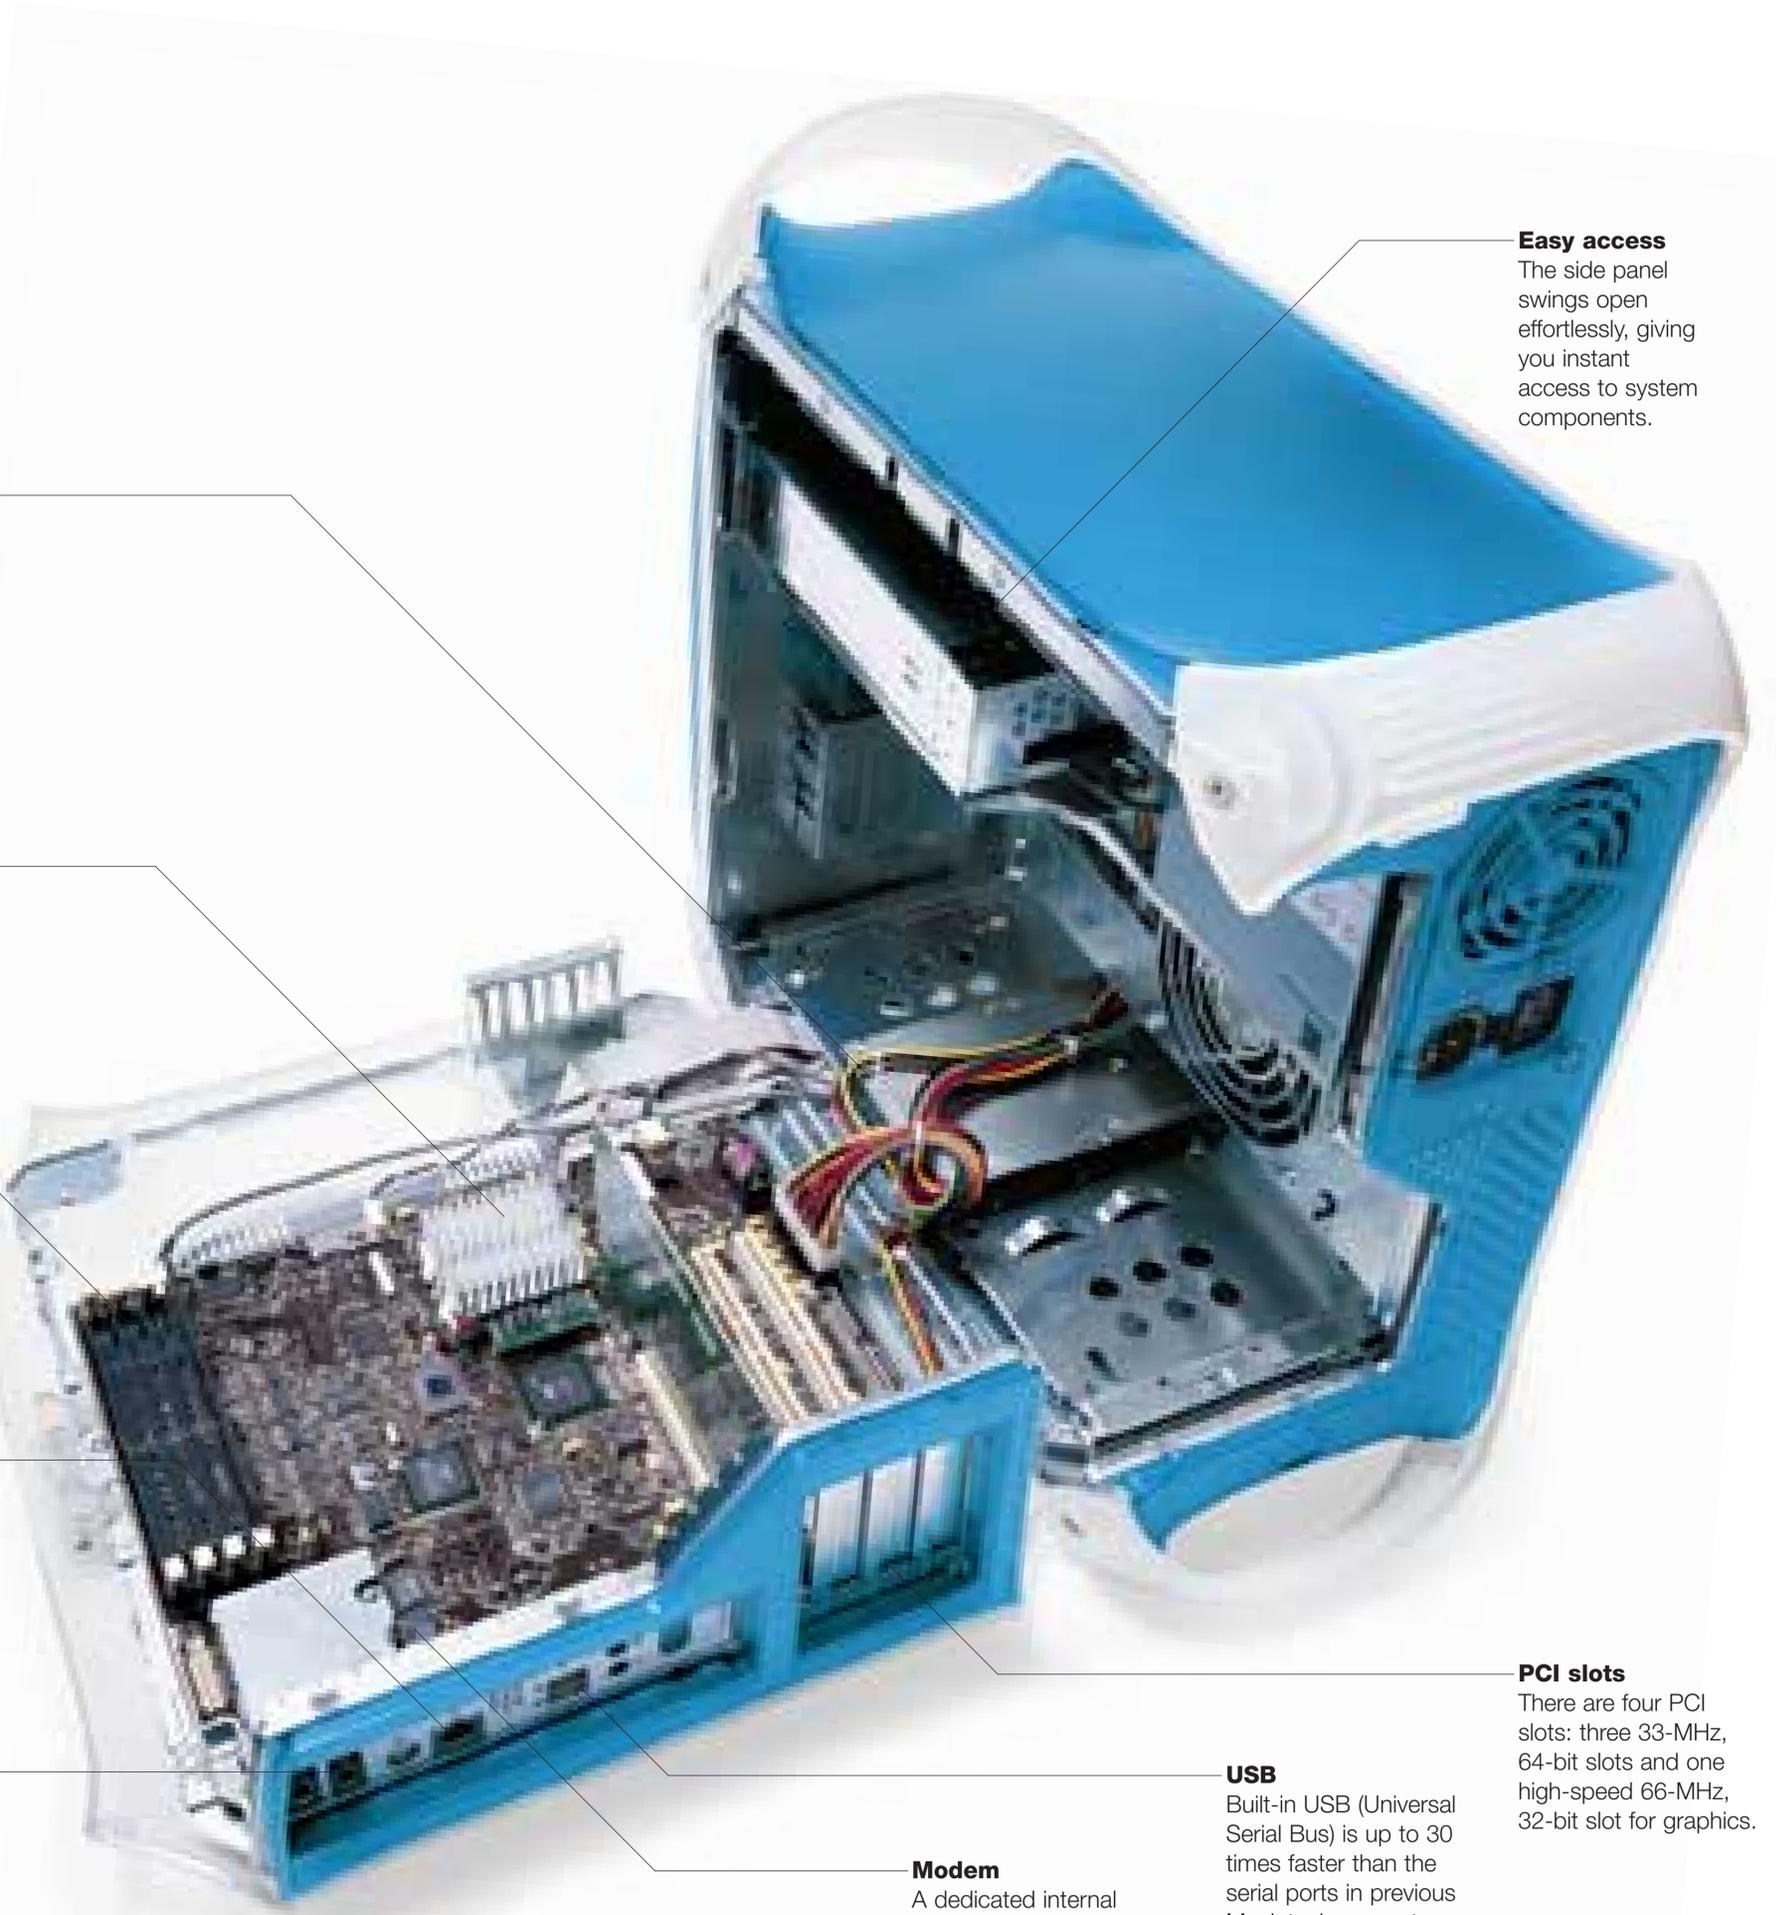

Storage
Three drive bays let you store over 100 gigabytes internally. There's built-in support for the newest Ultra ATA drives. Or configure the Power Mac G3 with Ultra2 SCSI drives running at up to 10,000 rpm.

Processor
Up to a 400-MHz PowerPC G3 processor, up to one megabyte of 200-MHz backside cache, and a 100-MHz system bus.

Memory
The Power Mac G3 can be configured with up to a gigabyte of memory in four industry-standard PC100 SDRAM slots.

Ethernet
10/100BASE-T Ethernet is built in. The Power Mac G3 also supports optional Gigabit Ethernet for networking at near light speeds.

FireWire
Blazing-fast FireWire (400 Mbps) lets you import video directly from digital camcorders with stunning quality—and connect a new generation of superfast scanners, printers, and disk drives.

Modem
A dedicated internal modem slot lets you put that optional 56K modem exactly where it belongs: inside your Mac.

USB
Built-in USB (Universal Serial Bus) is up to 30 times faster than the serial ports in previous Macintosh computers. Adding up to 127 USB peripheral devices is easy—just plug them in.

PCI slots
There are four PCI slots: three 33-MHz, 64-bit slots and one high-speed 66-MHz, 32-bit slot for graphics.

Think different.
