Capabilities
- Create documents and presentations in both Japanese and English, or Japanese and other languages supported by your system
- Produce promotional materials, foreign-language textbooks, bilingual educational materials, and more
- Insert Japanese text into letters, presentations, spreadsheets, and other documents
- Boost language learning by using interactive practice drills and other learning tools

Ease of use
- Installs quickly and easily
- Enables you to easily create, edit, and print Japanese
- Comes with an input guide that includes instructions in Japanese and English

Compatibility
- Runs applications that have been localized for Japanese, including WordPerfect, Persuasion, FileMaker Pro, and Lotus 1-2-3
- Recommended for all QuickDraw printers; also works with PostScript-compatible printers
- Runs on all 68020, 68030, and 68040 processor–based Macintosh computers; Power Macintosh computers; and other Mac OS–based computers

Flexibility
- Comes with three Kanji TrueType fonts: HonMincho, MaruGothic, and Osaka
- Lets you display, edit, and print files created using KanjiTalk, the Japanese version of the Macintosh operating system

The Apple Japanese Language Kit contains everything you need to easily add Japanese to your documents. The kit can be used with your Apple Macintosh computer to run Japanese applications and include Japanese text in letters, presentations, and reports. You can even work with files created using KanjiTalk, Apple's Japanese version of the Macintosh operating system.

Whether you're a desktop publisher or business professional, you can use the language kit to create materials such as brochures, posters, business cards, presentations, and restaurant menus in Japanese. Students and teachers can use it to run interactive Japanese-language programs and produce compelling term papers in Japanese. Although the Japanese Language Kit does not translate text, it does let you easily input, edit, and print in Japanese.

The Japanese Language Kit works as an extension to the Mac OS (System 7.1 or later). It also allows you to run Japanese applications. Because the language kit uses the operating system you already have, there is no need to store an additional system on your hard disk. The Japanese Language Kit also contains Kotoeri, the same easy-to-use input method that is included with KanjiTalk.

Almost every major software program has a version that has been localized for Japanese. All you need to run them is the Japanese Language Kit and System 7.1 or later. You can even use nonlocalized programs that take advantage of WorldScript, such as Nisus Writer, WordPerfect, and WorldWrite. WorldScript simplifies the way in which a single operating system can support multiple languages.

The Japanese Language Kit comes with three Kanji TrueType fonts that produce high-quality output from any Macintosh-compatible printer. Documentation is provided in both Japanese and English, and you can type using either the roman or the *kana* keyboard layout. These features make the language kit easy to use whether you're a native speaker or just learning Japanese.

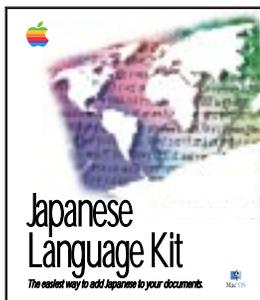

Mac OS

Ordering Information

Japanese Language Kit
Order No. M406000Z
- Japanese Language Kit on thirteen 1.4MB floppy disks and CD-ROM
- WorldScript II system extension
- *Japanese Language Kit Installation and User's Guide*
- *Macintosh Japanese Input Method Guide*

Product Details

Compatible applications
- The Japanese Language Kit can be used with a variety of applications localized for Japanese. They include:
— Acta 7 J
— Canvas J
— ClarisImpact J
— ClarisWorks J
— Director J
— Eg Word J
— FileMaker Pro J
— FreeHand J
— GreatWorks J
— HyperCard J
— Illustrator J
— Lotus 1-2-3 J
— MacDraw Pro J
— MacWord J
— MacWrite II J
— PageMaker J
— Persuasion J
— Photoshop J
— Premiere J
— QuarkXPress J
— SoundEdit J
— SuperPaint J
— WordPerfect J

- The Japanese Language Kit can be used with many nonlocalized programs that employ Apple WorldScript software technology. These programs include:
– AllPage
– AllScript
– Logo Vista E to J
– Nisus Writer
– WinText
– WorldWrite
– WordPerfect

Note: Apple has tested a limited number of applications; these lists are not intended to be comprehensive. Many nonlocalized applications that do not employ WorldScript software technology may provide limited functionality and allow input of Japanese characters.

Printer support
- Recommended: QuickDraw printers, including the Apple StyleWriter line, Personal LaserWriter line, and ImageWriter line
- PostScript-compatible printers, including Personal LaserWriter printers (although PostScript printers can produce Japanese, performance may vary)

System requirements
- Apple Macintosh computer or other Mac OS–based computer with at least 5MB of RAM (8MB recommended for multiple applications)
- Hard disk with approximately 30MB of RAM available
- Apple SuperDrive floppy disk drive or CD-ROM drive
- Macintosh System 7.1 or later
- An application that is localized for Japanese or that uses WorldScript software technology

Sample Fonts

TrueType outlines can be displayed and printed in any type size or shape without distortion.
