Power Macintosh G3 Series
Communications Package

It used to be hard to find someone to talk to about personal computers. Now it's hard to communicate effectively without them.

That's precisely why Apple created the Power Macintosh G3 communications package. This special offer combines the exceptional performance of the already popular Power Macintosh G3 series with a 56-Kbps modem and a suite of software specially chosen to help you use your computer to do best what you do most: communicate, organize, and entertain yourself. This package includes the following applications.

Extensive Internet capabilities

Everything from industry-standard browsers to a content filter to tools for publishing your own content on the Web.

America Online, Netscape Navigator, and Microsoft Internet Explorer

Get the access you need—whether you're a relative newcomer to the Internet or a computer professional whose job involves staying on top of all the latest Internet trends and technologies.

SurfWatch

Prevent the viewing of unwanted Internet content. Whether you're a parent or an educator concerned about children's access to sexually explicit material, or an employer worried about potential liability for condoning its viewing in the workplace, SurfWatch provides an easy-to-implement filter that can block out more than 10,000 sites that contain material you deem inappropriate.

Adobe PageMill

Create full-featured web pages without having to learn what HTML or even URL stands for, let alone learn complex coding techniques. Adobe PageMill combines familiar commands such as Find and Replace with an intuitive graphical interface, making it easy to incorporate text, graphics, tables, frames, audio, video, and animation—and even create links that automatically update themselves.

Advanced productivity tools

Integrated faxing, organizational programs, and other aids to help you make optimal use of your time and efforts.

FAXstf

Eliminate that bottleneck between working on your computer, printing out the results, and then finding a fax machine that's both available and functional. FAXstf lets you fax directly from the application you are working in—to virtually any fax device. You can even send and receive faxes while you continue to work in any application.

Now Up-to-Date & Contact

Forget those frantic searches for long-lost business cards and crumpled cocktail napkins that contain vital phone numbers. Now Up-to-Date & Contact gives you instant, dependable access to detailed information about how to get in touch with the people who matter to you. It also helps you put other important aspects of your life in order, with tools such as a "to-do" list prioritizer and a quick-view calendar. And it even provides for easy, drag-and-drop posting of information on web pages.

State-of-the-art entertainment

Two communications-based games that let you unwind from a hard day's work—or simply revel in your computer's lighter side.

Jack Nicklaus 4

Now that you've become informed, efficient, and organized, give yourself a break—and take a virtual sports vacation. This multiplayer golf game illustrates another aspect of computer communications, letting you challenge golfing legend Jack Nicklaus on any of five preset courses, or compete with friends via LAN, the Internet, or Apple Remote Access. You can also design your own course (there are 100 options for trees, not to mention sand traps and other hazards of terrain and foliage) or download others' course creations from the Internet.

Master of Orion II

Leave the neatly manicured greens—in fact, the whole planet—behind, and test your tactics as you attempt to forge an empire that spans the entire known universe. A turn-based strategy game, Master of Orion II takes advantage of computer communications to allow up to eight players to compete through such actions as colonizing planets, exchanging world views with life-forms from other worlds, and conquering distant star systems in an effort to secure resources that will ensure your ultimate supremacy.

Comprehensive reference resources

Extensive local electronic information, plus easy, efficient links to the Web; it's never been so simple to get your hands on the information you're most likely to need.

Microsoft Bookshelf 98

Enjoy easy electronic access to 10 current, comprehensive reference works, backed by search capabilities designed to streamline the process of locating the precise information you need. And in the rare case when you can't find what you're looking for within these 10 volumes, Microsoft Bookshelf 98 gives you an easy-to-use window on an entire world of information: It includes links with Infoseek, so you have the tools you need to expand your search to the Web.
