Reasons to upgrade to Mac OS 8.6:

- Use Sherlock to search the Internet with more than 20 search engines
- Search for information inside your documents, including PDF and HTML files
- View your search results ranked by relevance in one convenient, scrollable window
- Copy files over a network faster than with Windows NT
- Automate nearly any task on your computer with AppleScript

## New with Mac OS 8.6 update for Mac OS 8.5 users

- Improve the battery life of your PowerBook G3 by up to 25 percent
- Enjoy increased stability
- Have information delivered from the Internet to your desktop
- Create logs of print jobs and fonts for easy reference
- Use Speech Recognition to control your iMac or Power Macintosh G3 with your voice
- Use the latest USB and FireWire devices without installing extra software
- Read and write to DVD-RAM discs
