

Apple

Servers in Design

Apple Servers

Topics covered in this presentation:

- Apple's server software products
 - AppleShare IP
 - Mac OS X Server
- How to choose the platform to fit your needs
- Power Macintosh G3 Server
- Third-party software solutions

Why
Use
Servers?

Servers in Print Publishing

- File transfer is still the primary purpose for servers
- Print production needs
 - OPI, PDF, imposition, trapping, job tracking, and billing
- Media asset management

Servers in Web Publishing

- Web
- FTP
- E-mail
- E-commerce

Why Apple Servers?

- Innovative software products
- Cross-platform support
- Speed and ease-of-use for workgroups
- High-performance hardware

Why Apple Servers for Publishing?

OS-level color
architecture

- OS-level automation
- OS-level search engine
- Track record of speed, simplicity, and satisfaction for prepress workgroups

AppleShare IP 6.2

Everyone Can Play

Anyone interested in:

Publishing on the Internet

Cross-platform
communications

Fast file sharing

Local or worldwide e-mail

... regardless of size

Complete Suite of Services

AFP

Network

Performance

More than twice as fast as Windows NT Server

One large file (185 MB)

New Mac
Server G3
450 MHz

72 Mbps

26 Mbps

Folder of 96 files
(2MB each)

New Mac
Server G3
450 MHz

62 Mbps

20 Mbps

File copies from 300-MHz Power Macintosh G3 client to Macintosh Server G3 and Windows NT Server

Web Performance

Throughput in Mbps using HTTP 1.1 Source: WebStone test

Real-World Improvements!

CCC on AppleShare IP 5

4x the CCC on AppleShare IP 6.2

Scalability

AppleShare IP Features

- File sharing with Mac clients using AppleTalk and TCP/IP
- File sharing with Windows clients using SMB and TCP/IP
- Sherlock searching
- Print queues for AppleTalk and IP-based printers
- Mail server support of POP and IMAP
- Remote administration via the Web

Mac OS X Server

Building a Powerful Server

- Modern foundation
 - Rock-solid, fast network performance
- Open standards
 - Mach kernel, BSD 4.4, TCP/IP, Java
- Internet and workgroup functionality
 - Innovative services from Apple

Web Performance

Fastest Apache Web Server!

WebBench static HTML throughput with 60 PC clients in connections per second (cps) on 100BASE-T Ethernet.
Results compiled by ZD Testing Analysis Group (www.zdnet.com/zdtag/reports/reports.html/).

Network Performance

Outperforms Windows NT Server!

NetBench Sequential Read test of network throughput from 8, 16, and 32 Mac clients in Mbps on 100BASE-T Ethernet.

Application Services

Application Services

- Apache web server
 - The world's #1 HTTP web server
 - Operating system optimized to deliver best-in-class performance
- QuickTime Streaming Server
 - Streams QuickTime files over industry-standard protocols
 - The affordable way to deliver rich digital media

Application Services

Apple File Services

- Serve files to any AppleShare client over TCP/IP or AppleTalk networks
- Scale to over a thousand simultaneous users and thousands of open files
- Allow web-based remote administration

Application Services

- WebObjects 4

- #1 application server
- Apple Store, BBC News, Hard Rock Café

- NetBoot

- Multiple Macintosh computers in a network managed as if they were a single system
 - Ideal for data-entry and editorial workflows

Your Mac can be anywhere

Working together

A Great Servers for every need Complement

AppleShare IP

The world's easiest-to-use general-purpose server

Mac OS X Server

Innovative services with greater scalability

Combine Them as Needed

Pricing

Mac OS X Server

- For any Power Macintosh G3 with at least 64MB of RAM
- Unlimited client license for:
 - Apache, NetBoot, Macintosh Manager, Apple File Services
- WebObjects development and 50-tpm deployment license
- Estimated retail price: \$499!

Macintosh Server G3

- Based on new Power Macintosh G3 architecture with faster processors, memory, disk I/O, and system bus
- Unlimited-client license for NetBoot, Macintosh Manager, and Apple File Services
- Software preinstalled for easy setup and configuration

\$4,999

Estimated retail price.

Apple Servers

Power, innovation, and ease of use

- Mac OS X Server
- AppleShare IP server
- Choose either platform or both to fit your needs

Think
different.

Q&A

Optional
Slide

Macintosh Server G3

• 400MHz PowerPC G3 with 1MB cache
with Mac OS X Server

- 256MB SDRAM (expandable to 1GB)
- Two 9GB 10,000-rpm Ultra2 LVD SCSI hard disks with single-channel Ultra2 LVD SCSI card
- 24x-speed (maximum) CD-ROM drive
- Built-in 10/100BASE-T Ethernet and 4-port 10/100BASE-T Ethernet card
- Mac OS X Server CD, WebObjects
