Apple Servers for Publishing

Imagine the ultimate server for publishing. Imagine it is fast, easy-to-use, based on industry standards, and handles a wide range of applications. Well, fortunately, Apple has two such servers—AppleShare IP and Mac OS X Server. Both run on the Power Macintosh G3. And both are so powerful, they can simultaneously handle your e-mail, print sharing, file transfer, and web hosting services. And just about anything else you can imagine.

AppleShare IP

For many design or publishing firms, AppleShare IP software is the perfect general-purpose server for speeding the exchange of files, email services and print sharing to both Mac or Windows clients. Better yet, it runs on the easy-to-use Mac OS 8.6 operating system, and works with hundreds of existing applications for asset management, databases, and work-group collaboration.

MacOS X Server

For large-scale networking, the Macintosh Server G3 with Mac OS X Server software is the most powerful, scalable Macintosh server ever. It includes Apache, the world's most popular web server, which scales from workgroups to Internet site hosting. Mac OS X Server includes NetBoot, which enables multiple Macintosh computers to run from a single server that holds both system software and applications. It also includes WebObjects software, the innovative technology for creating dynamic web applications for everything from e-commerce to asset management.

Power Macintosh Server G3

Designed for maximum performance, Power Macintosh Server G3 is the ideal hardware platform for AppleShare IP and MacOS X Server. With a fast PowerPC G3 processor, plenty of RAM, high-capacity hard disks, Universal Serial Bus (USB) ports for connecting peripherals, and preinstalled software, the Macintosh Server G3 is a powerful Internet, media, and workgroup server. In fact, this combination of outstanding hardware and software makes the Macintosh Server G3 one of the fastest web servers available.

Apple Server Solutions

Here are just a few of the server solutions available for Macintosh. For a complete list, visit the Macintosh Products Guide at www.apple.com/guide.
