1111111Read Me:

This presentation has been compressed using Apple Quicktime 3? and the Sorenson? video codec. It should run perfectly on a G3 Macintosh? or Intel Pentium II? Computer. Steve Job's presentation should also run with no problem on Power PC computers running 180 MHz or faster.

Quicktime Playback Problems

1. Make sure the Quicktime plug-in is installed and has at least 12 megs of Ram devoted to it.

For more information about the QuickTime portion of this presentation, please contact: Jay McCarthy
