Apple Web Page Construction Kit

Anyone can surf the World Wide Web…now you can make waves on it!

The Apple Web Page Construction Kit is an integrated suite of easy-to-use applications for building dynamic multimedia web pages. The tools included in the kit let you design pages, create and edit graphics and sounds, make animations, and upload your finished pages to your web hosting computer. And each page will reflect your own unique personality, because the kit doesn't force you to use pre-existing templates.
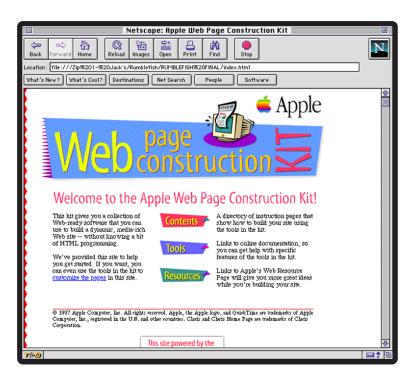

One of the most powerful features of the kit is a CD-based instructional guide in the form of a web site. This guide takes you step by step through all the basic tasks of building a web site. It even has links to CD-based documentation for each of the tools in the kit.

The Apple Web Page Construction Kit links you directly to Apple's Web Page Construction Kit Resource Page web site, where you can get updates to the kit's software and share web page ideas with other users.

The Apple Web Page Construction Kit is ideal for students, educators, and all types of web enthusiasts. In K–12 institutions, students can use it for classroom projects; teachers for leading web workshops and communicating with parents; and administrators for publishing school information for parents, students, faculty, and staff.

In higher education, students will appreciate how easy it is to publish term papers and other class projects as well as information about clubs, fraternities and sororities, and dorms. Faculty members can use the kit to share research projects and curriculum information, as well as to teach web classes.

So if you've been wanting to make your own waves on the World Wide Web, get the Apple Web Page Construction Kit and plunge right in!

Technical Specifications

Claris Home Page software
Claris Home Page enables you to easily create dynamic web pages and whole web sites. Its automatic programming features allow you to use familiar tools, commands, and actions to format text, graphics, and page links.
- Automatically creates the proper HTML code as you design your web page
- Provides instant access to HTML source code for experienced web designers
- Supports tables, frames, interactive forms, Java applets, and other sophisticated web page features
- Includes web site uploading capability

wwwART software
wwwART from Microfrontier, Inc., is designed for creating and modifying graphics for web pages. You can start with an existing image or create an original graphic to use as a background, button, banner, or other graphic element on your web site.
- Provides 32-bit image editing
- Imports TIFF, PICT, PhotoCD, PostScript, Photoshop, MacPaint, and other formats
- Saves files in GIF or JPEG format
- Automatically optimizes resolution for web display
- Lets you capture images directly from a scanner

Web Explosion! Special Edition graphics library
Web Explosion! Special Edition from Nova Development Corporation is an extensive library of ready-to-use graphic elements.
- Offers more than 2,000 ready-to-use images
- Includes standard web page elements such as buttons, bullets, banners, and backgrounds
- Provides a wide variety of clip-art images and photographs

WebPainter software
With WebPainter from Totally Hip Software, you can create animations for your web pages from original or imported graphics.
- Imports images in popular graphic formats
- Exports in GIF, Java, QuickTime, Sizzler, and other animation formats
- Lets you choose from up to 16 million colors
- Comes with Macintosh, Windows, and Netscape palettes—and lets you create your own custom palettes
- Includes a library of sample animations

Kaboom! 3.0 Special Edition software and sound library
Kaboom! Special Edition from Nova Development Corporation provides an extensive sound library, plus a sound editor with which you can combine, edit, and add special effects to the Kaboom! sounds. You can also use the sound editor to record your own sounds.
- Gives you more than 500 ready-to-use sounds
- Includes the Kaboom! Factory sound-capture and sound-editing utility
- Supports .au and .mov formats
- Lets you incorporate reverb, echo, and other effects

Web browser software
A web browser is also included in this kit to view the CD-based instructional web site and the software documentation, and to preview your web site as you assemble it in Claris Home Page. You can also use the browser to visit the Apple Web Page Construction Kit Resource Page or any other site on the World Wide Web.

System requirements
- Apple Power Macintosh, PowerPC processor–based Macintosh Performa, or other PowerPC processor–based Mac OS–compatible computer
- At least 16MB of RAM (32MB recommended)
- Mac OS 7.5.5 or later software
- Double-speed (or faster) CD-ROM drive
- Monitor that can display at least 256 colors at 640-by 480-dot-per-inch resolution
- Internet access via a modem or local area network (Internet access is not required for creating a web site with this kit, but is needed for uploading your web site, viewing it online, and accessing the Apple Web Page Construction Kit Resource Page on the Apple web site.)
