

Beat 2000 Version 1.00 English Demo Readme

Beat 2000 is the latest advancement in musical software. Beat 2000 will help you create and mix your favorite music right on your PC. No musical experience is necessary, the full program supports all different music styles including: rock, jazz, classical, techno, worldbeat and more. It supports export to RealAudio and it is MMX optimized.

System Requirements

- Windows® 95 (English) or later with DirectX™ 3.0 or later and audio compression component installed
- 16 MB of RAM
- Pentium 60 or better
- Display capable of 640x480x256 or higher
- DirectSound compatible sound card.
- 10 MB HD free space for installation. 20 MB HD free space for temporary storage when the program is running.

Notes

- You can download DirectX™ from Microsoft® site: <http://www.microsoft.com/directX>.
- Audio compression is applied to demo song file to achieve smaller file size. Therefore, audio compression component must be installed in your system in order to have the demo running properly. Audio compression component is normally installed in most of Windows® 95. If not, you can install it by the following steps: **START** button→**SETTINGS**→**CONTROL PANEL**→**WINDOWS SETUP**→**MULTIMEDIA** and check the audio compression check box.
