JustPOP3 version 1.91

JustPOP3 is more than a poor mail checker, it can check, read ad delete mail from an
unlimited number of mailboxes, you can select various kind of filters, it can also send
simple mail message with Quick Mail, start Your preferred E-Mail client,
navigate the WEB with Quick Explorer and monitor chenges of Your preferred http pages.
From version 1.91 JustPOP3 has dial-up facilities.

Each mailbox is served by a dedicated thread that is started and terminated when
is needed.

JustPOP3 saves all mailboxe's and others information that you enter in a JustPOP3.INI file,
located into your O.S.'s default directory for .INI files.

How to ...

-- Insert a new mailbox --

1) point with the mouse on the mailboxes' list and click once with the right button
2) when the pop-up menu comes up click on 'New'
3) you will see 'POP3 Server' titled dialog box, insert the appropriate
information as explained hereinafter:
"Server": your POP3 server's address
"Port": your POP3 server's port (default 110)
"Account": your account name
"Password": your account password (the input data will not be displayed)
"Operations": can be either "Check only", "Read" and "Read and Delete".
"Check mail every": you can set the frequency (in minutes) of reading/checking your mail
"Enable this server": must be on to enable this mailbox (useful when you want
temporary disable the mailbox's reading/checking operation)

-- Modify a mailbox --

1) select a mailbox's row
2) either click once with mouse's right button or just double click
3) when the popup menu comes up click on "Contents"

To add a new filter select 'New' button, You will see a tab control with six pages;
on page named 'Filter' You can select the name of filter and select one or more
account You have, a filter could be enabled or not.
On page 'From' You can enter one or more e-mail addresses (who send mail to You)
each one separated by linefeed, also You can reverse the logic selecting checkbox 'Negate
selection'.
On page 'Date' You can select a date and the rule 'When'.
On page 'Subject' You can select the subject to serch for with options 'Match entire subject'
and
'Case sensitive', the text You type in can be in any position into message subject.
On page 'Content and Size' You can select the text to be matched into the body of message
with options 'Match entire content' and 'Case sensitive', the text You type in can be in any

position into message body. Also You can select a size with the rule 'When'.
On page 'Operations' You can select the action to do when the filter has matched rules.
You can select 'Delete' and 'Reply', if reply is enabled the text You type in is
automatically sent to sender of message filtered, text can be in HTML format.
Note that automatic reply is executed only if the mail message is removed from server,
this is done by options 'Read and Delete' or when a filter deletes a message.
Each filter's rule can be enabled or disabled, the filters are saved into file 'filters.jp3'
located into JustPOP3 working directory.

-- Managing Dial-Up options --

JustPOP3 can establish a phone call using one of Your entries in phone book.
The call can be done manually or automatically, You can configure it by opening
'Options/Connections/Dial parameters'. Select from right list the preferred
phone book entry, select 'Dial mode' then confirm the dialog.
You can also select the 'Hangup on exit'.
N.B. The 'LAN' option in 'Connections/Connection through' is not enabled.
