

2 SQL Parameter Examples

Name: SQL Parameters (Oracle Data Control Version)

Connection: SCOTT/TIGER

DatabaseName: ExampleDb

Database Table(s): EMP

Files: parmodc.bas, parmodc.frm, parmodc.mak, parmodc.exe, oradc.vbx

Purpose: A simple Emp form using an Oracle Data Control(ODC) . You may enter a selection in the JOB field and a query will be issued using a parameter ('select * from emp where job=:job'). Using parameters means that the query will not be reparsed.

Compare this sample the one that communicates directly with the Oracle InProcess Server(OIP).

Name: SQL Parameters (Oracle InProc Version)

Connection: SCOTT/TIGER

DatabaseName: ExampleDb

Database Table(s): EMP

Files: parmoip.bas, parmoip.frm, parmoip.mak, parmodc.exe

Purpose: A simple Emp form using the Oracle InProcess Server(OIP). You may enter a selection in the JOB field and a query will be issued using a parameter ('select * from emp where job=:job'). Using parameters means that the query will not be reparsed.

Compare this sample the one that communicates directly with the Oracle Data Control(ODC).
