

## **Freelance Graphics: Activate method**

{button ,AL('H\_ACTIVATE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;H\_PLACEMENTBLOCK\_CLASS;',0)}  
[See list of classes](#)

Simulate a click action on a document or a "Click here..." block object. The object becomes the current object and is brought to the foreground.

### **Syntax**

*object*.Activate

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentApplication.Activate

## **Freelance Graphics: AddPoint method**

{button ,AL('H\_ADDPOINT\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

Add a point to the object.

### **Syntax**

*drawobject*.AddPoint(*segment*, *x*, *y*)

### **Parameters**

*segment* as Integer

Identifies the point after which you want to add the new point. (The first drawn point is 1.) If the object in question is not a polygon, line, arrow, or curve, this value is ignored.

*x* as Integer

Horizontal [coordinate](#) of the point relative to the left edge of the window, in [twips](#).

*y* as Integer

Vertical coordinate of the point relative to the bottom of the window, in [twips](#).

### **Return values**

None

## **Freelance Graphics: AddToPageSelection method**

{button ,AL('H\_ADDTOPAGESELECTION\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Add a page to the set of selected pages in the document.

### **Syntax**

*documentobject.AddToPageSelection(pageobject)*

### **Parameters**

*pageobject* as *Page*

Any page object.

### **Return values**

None

### **Examples**

CurrentDocument.AddToPageSelection MyPage

## **Freelance Graphics: AddToSelection method**

{button ,AL('H\_ADDTOSELECTION\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;H\_PAGESELECTION\_CLASS;H\_SELECTION\_CLASS;','0)} [See list of classes](#)

Add the specified object to the set of selected documents, pages, or objects.

### **Syntax**

*object.AddToSelection(drawobject)*

### **Parameters**

*drawobject* as *DrawObject*

Any DrawObject object.

### **Return values**

None

### **Examples**

CurrentPage.Selection.AddToSelection MyRect

or

Selection.AddToSelection MyRect

## **Freelance Graphics: Align method**

{button ,AL('H\_ALIGN\_METHOD\_MEMDEF\_RT;H\_SELECTION\_CLASS;','0)} [See list of classes](#)

Align the currently selected objects.

### **Syntax**

*selectionobject.Align(aligntype, centeronpage)*

### **Parameters**

*aligntype* as Variant (Enumerated)

<b>Value</b>	<b>Description</b>
\$AlignLeft	Align left sides
\$AlignRight	Align right sides
\$AlignTop	Align tops
\$AlignBottom	Align bottoms
\$AlignRow	Center in a row
\$AlignColumn	Center in a column
\$AlignPoint	Center on a point

*centeronpage* as Integer (Boolean)

<b>Value</b>	<b>Description</b>
TRUE (-1)	Center on page
FALSE (0)	Do not center on page

### **Return values**

None

### **Examples**

Selection.Align \$AlignLeft, False

## **Freelance Graphics: ApplyStyle method**

{button ,AL('H\_APPLYSTYLE\_METHOD\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS','0)} [See list of classes](#)

Apply the specified style name to the text block.

### **Syntax**

*textblockobject.ApplyStyle(stylename)*

### **Parameters**

*stylename* as String

Name to apply to the style.

### **Return values**

None

## **Freelance Graphics: BrowseDiagrams method**

{button ,AL('H\_BROWSEDIAGRAMS\_METHOD\_MEMDEF\_RT;H\_PLACEMENTBLOCK\_CLASS;','0)} [See list of classes](#)

Launch the Clip Art browser using the specified diagram file. When the user clicks OK in the browser, insert the currently selected diagram in the "Click here..." block.

### **Syntax**

*placementblockobject.BrowseDiagrams(filename)*

### **Parameters**

*filename* as String

Optional name of the diagram file. If omitted, defaults to the first .DGM file in the \SMASTERS\FLG directory.

### **Return values**

None

## **Freelance Graphics: BrowseSymbols method**

{button ,AL('H\_BROWSESymbols\_METHOD\_MEMDEF\_RT;H\_PLACEMENTBLOCK\_CLASS','0)} [See list of classes](#)

Launch the Clip Art browser using the specified symbol file. When the user clicks OK in the browser, insert the currently selected symbol in the "Click here..." block.

### **Syntax**

*placementblockobject.BrowseSymbols(filename)*

### **Parameters**

*filename* as String

Optional name of the symbols file. If omitted, defaults to the first .SYM file in the \SMASTERS\FLG directory.

### **Return values**

None

## **Freelance Graphics: Cascade method**

{button ,AL('H CASCADE\_METHOD\_MEMDEF\_RT;H APPLICATIONWINDOW\_CLASS;H\_DOCWINDOW\_CLASS;' ,0)} [See list of classes](#)

Cascade all MDI windows in the application or document window.

### **Syntax**

*applicationwindowobject.Cascade*

### **Parameters**

None

### **Return values**

None

### **Examples**

`CurrentApplication.Cascade`

## **Freelance Graphics: ClearSelection method**

{button ,AL('H\_CLEARSELECTION\_METHOD\_MEMDEF\_RT;H\_PAGESELECTION\_CLASS;H\_SELECTION\_CLAS  
S;';0)} [See list of classes](#)

Deselect all selected items.

### **Syntax**

*object*.ClearSelection

### **Parameters**

None

### **Return values**

None

### **Examples**

Selection.ClearSelection

## **Freelance Graphics: CloseWindow method**

{button ,AL('H\_CLOSEWINDOW\_METHOD\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

Close the current MDI window.

### **Syntax**

*applicationobject.CloseWindow(closewindow)*

### **Parameters**

*closewindow* as Integer

Optional and ignored.

### **Return values**

None

### **Status codes**

None

### **Examples**

CurrentDocument.Save

CurrentDocument.CloseWindow

## **Freelance Graphics: Close method**

{button ,AL('H\_CLOSE\_METHOD\_MEMDEF\_RT;H\_APPLICATIONWINDOW\_CLASS;H\_DOCUMENT\_CLASS;H\_D\_OCWINDOW\_CLASS;','0)} [See list of classes](#)

Close the Freelance Graphics application window (exit Freelance Graphics), or close a document or document window.

### **Syntax**

*object.Close(exitapplication)*

### **Parameters**

*exitapplication* as *Integer*

Optional and ignored.

### **Return values**

None

### **Examples**

`CurrentApplication.Close`

## **Freelance Graphics: ColorToRGB method**

{button ,AL('H\_COLORTORGB\_METHOD\_MEMDEF\_RT;H\_COLORS\_CLASS;',0)} [See list of classes](#)

Return the RGB value of the color produced by the current values of the Red, Green, and Blue properties of a Color object.

### **Syntax**

*colorobject*.ColorToRGB(*colorobject*)

### **Parameters**

*colorobject* as *Color*

The Color object whose RGB value you want returned.

### **Return values**

Long, RGB value.

### **Examples**

```
Dim MyColorRGB as Long  
MyColorRGB = CurrentApplication.Colors.ColorToRGB(MyColor)
```

## **Freelance Graphics: Connect method**

{button ,AL('H\_CONNECT\_METHOD\_MEMDEF\_RT;H\_SELECTION\_CLASS;',0)} [See list of classes](#)

Connect the currently selected line objects.

### **Syntax**

*selection*.Connect

### **Parameters**

None

### **Return values**

None

### **Example**

Selection.Connect

## **Freelance Graphics: ConvertTo method**

{button ,AL('H\_CONVERTTO\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

Convert the object to lines or polygons.

### **Syntax**

*drawobject*.ConvertTo(*conversiontype*)

### **Parameters**

*conversiontype* as Integer (Enumerated)

<b>Value</b>	<b>Description</b>
\$ConvertToPolygons	Create one or more polygons from the object
\$ConvertToLines	Create one or more lines from the object

### **Return values**

None

### **Examples**

```
Dim MyRect as DrawObject  
Set MyRect = CurrentPage.CreateRect  
MyRect.ConvertTo($ConvertToLines)
```

## **Freelance Graphics: CopyPage method**

{button ,AL('H\_COPYPAGE\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Copy a page to the Clipboard.

### **Syntax**

*pageobject*.CopyPage

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentPage.CopyPage

## **Freelance Graphics: CopySelection method**

{button ,AL('H\_COPYSELECTION\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Copy the selection to the Clipboard.

### **Syntax**

*documentobject*.CopySelection

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentPage.CopySelection

## **Freelance Graphics: Copy method**

{button ,AL('H\_COPY\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

Copy an object to the Clipboard.

### **Syntax**

*drawobject*.Copy

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentSelection.Copy

or

```
Dim MyRect as DrawObject  
Set MyRect = CurrentPage.CreateRect  
MyRect.Copy
```

## **Freelance Graphics: CreateArrow method**

{button ,AL('H\_CREATEARROW\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Draw an arrow on the page.

### **Syntax**

*pageobject.CreateArrow(xstart, ystart, xfinish, yfinish)*

### **Parameters**

*xstart as Integer*

(Optional, see note) Starting horizontal coordinate of the arrow, in twips.

*ystart as Integer*

(Optional, see note) Starting vertical coordinate of the arrow, in twips.

*xfinish as Integer*

(Optional, see note) Ending horizontal coordinate of the arrow, in twips.

*yfinish as Integer*

(Optional, see note) Ending vertical coordinate of the arrow, in twips.

**Note** If you omit the parameters, the arrow will be centered on the page.

### **Return values**

An instance of the DrawObject class (the drawn arrow).

### **Examples**

```
Dim MyArrow as DrawObject  
Set MyArrow = CurrentPage.CreateArrow(1000, 1000, 3000, 3000)
```

## **Freelance Graphics: CreateChart method**

{button ,AL('H\_CREATECHART\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Create a chart on the page.

**Note** For more information on working with charts in LotusScript, search for ChartBase in the Help Index.

### **Syntax**

*pageobject.CreateChart(x, y, width, height)*

### **Parameters**

*x as Integer*

(Optional, see note) Right edge of the chart object relative to the left edge of the window, in [twips](#).

*y as Integer*

(Optional, see note) Bottom edge of the chart object relative to the bottom of the window, in twips.

*width as Integer*

(Optional, see note) Width in twips.

*height as Integer*

(Optional, see note) Height in twips.

**Note** If you omit the parameters, the chart will be centered on the page.

### **Return values**

An instance of the DrawObject class (the drawn chart).

### **Examples**

```
Dim MyChart as Chart  
Set MyChart = CurrentPage.CreateChart(4000,10000,6000,6000)
```

## **Freelance Graphics: CreateComment method**

{button ,AL('H\_CREATECOMMENT\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Create TeamReview comments on a page.

### **Syntax**

*pageobject.CreateComment(x, y, width, height)*

### **Parameters**

*x as Integer*

(Optional, see note) Right edge of the comment object relative to the left edge of the window, in twips.

*y as Integer*

(Optional, see note) Bottom edge of the comment object relative to the bottom of the window, in twips.

*width as Integer*

(Optional, see note) Width in twips.

*height as Integer*

(Optional, see note) Height in twips.

**Note** If you omit the parameters, the comment will be centered on the page.

### **Return values**

An instance of the DrawObject class (the TeamReview comments).

### **Examples**

```
CurrentPage.CreateComment "Four score and seven years ago"
```

## **Freelance Graphics: CreateLine method**

{button ,AL('H\_CREATELINE\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Draw a line on the page.

### **Syntax**

*pageobject.CreateLine(xstart, ystart, xfinish, yfinish)*

### **Parameters**

*xstart as Integer*

(Optional, see note) Starting horizontal coordinate of the line, in twips.

*ystart as Integer*

(Optional, see note) Starting vertical coordinate of the line, in twips.

*xfinish as Integer*

(Optional, see note) Ending horizontal coordinate of the line, in twips.

*yfinish as Integer*

(Optional, see note) Ending vertical coordinate of the line, in twips.

**Note** If you omit the parameters, the line will be centered on the page.

### **Return values**

An instance of the DrawObject class (the drawn line).

### **Example**

```
Dim MyLine as DrawObject  
Set MyLine = CurrentPage.CreateLine(1000, 1000, 3000, 3000)
```

## **Freelance Graphics: CreateMovie method**

{button ,AL('H\_CREATEMOVIE\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Add a movie to the page.

### **Syntax**

*pageobject.CreateMovie(x, y, width, height, filename)*

### **Parameters**

*x as Integer*

(Optional, see note) Left edge of the movie window relative to the left edge of the window, in twips.

*y as Integer*

(Optional, see note) Bottom edge of the movie window relative to the bottom of the window, in twips.

*width as Integer*

(Optional, see note) Width in twips.

*height as Integer*

(Optional, see note) Height in twips.

*filename as String*

Name of the file containing the movie to be added to the page.

**Note** If you omit the optional parameters, the movie will be centered on the page.

### **Return values**

An instance of the DrawObject class (the movie object).

## **Freelance Graphics: CreateOval method**

{button ,AL('H\_CREATEOVAL\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Draw an oval on the page.

### **Syntax**

*pageobject.CreateOval(xcenter, ycenter, width, height)*

### **Parameters**

*xcenter as Integer*

(Optional, see note) Horizontal coordinate of the center of the oval, in twips.

*ycenter as Integer*

(Optional, see note) Vertical coordinate of the center of the oval, in twips.

*width as Integer*

(Optional, see note) Width of the oval, in twips.

*height as Integer*

(Optional, see note) Height of the oval, in twips.

**Note** If you omit the parameters, the oval will be centered on the page.

### **Return values**

An instance of the DrawObject class (the drawn oval).

### **Examples**

```
Dim MyOval as DrawObject  
Set MyOval = CurrentPage.CreateOval(1000, 1000, 3000, 3000)
```

## **Freelance Graphics: CreatePageFromTemplate method**

{button ,AL('H\_CREATEPAGEFROMTEMPLATE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)

Create a new page using a content topic.

### **Syntax**

*document.CreatePageFromTemplate pagetitle, templateindex*

### **Parameters**

*PageTitle* as String

Name for the new page.

*TemplateIndex* as Integer

Identifies the content topic page type (the first type is 1).

### **Return values**

An instance of the Page class.

## **Freelance Graphics: CreatePage method**

{button ,AL('H\_CREATEPAGE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)

Create a new page.

### **Syntax**

*documentobject.CreatePage pagetitle, masterindex*

### **Parameters**

*pagetitle as String*

Name for the new page

*masterindex as Integer*

Identifies the type of content topic page (the first type is 1).

### **Return values**

An instance of the Page class.

### **Examples**

```
Dim Page1 as Page  
Set Page1 = CurrentDocument.CreatePage ("My Title Page", 1)
```

## **Freelance Graphics: CreatePlacementBlock method**

{button ,AL('H\_CREATEPLACEMENTBLOCK\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Create a "Click here..." block.

### **Syntax**

*pageobject.CreatePlacementBlock(x, y, width, height, blocktype, text)*

### **Parameters**

*x as Integer*

(Optional, see note) Left edge of the object relative to the left edge of the window, in twips.

*y as Integer*

(Optional, see note) Bottom edge of the object relative to the bottom of the window, in twips.

*width as Integer*

(Optional, see note) Width in twips.

*height as Integer*

(Optional, see note) Height in twips.

*blocktype as Variant*

<b>Value</b>	<b>Description</b>
pbTypeText	Click here to enter text
pbTypeSymbol	Click here to add a symbol
pbTypeChart	Click here to create a chart
pbTypeOrgChart	Click here to create an organization chart
pbTypeTable	Click here to create a table
pbTypeButton	Click here to add a button

*text as String*

Prompt text to include in the "Click here..." box.

**Note** If you omit the optional parameters, the block will be centered on the page.

### **Return values**

An instance of the DrawObject class.

## **Freelance Graphics: CreateRect method**

{button ,AL('H\_CREATERECT\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Draw a rectangle on the page.

### **Syntax**

*pageobject.CreateRect(xcenter, ycenter, width, height)*

### **Parameters**

*xcenter as Integer*

(Optional, see note) Horizontal coordinate of the center of the rectangle, in twips.

*ycenter as Integer*

(Optional, see note) Vertical coordinate of the center of the rectangle, in twips.

*width as Integer*

(Optional, see note) Width of the rectangle, in twips.

*height as Integer*

(Optional, see note) Height of the rectangle, in twips.

**Note** If you omit the parameters, the rectangle will be centered on the page.

### **Return values**

An instance of the DrawObject class (the drawn rectangle).

### **Examples**

```
Dim MyRect as DrawObject  
Set MyRect = CurrentPage.CreateRect(1000, 1000, 2000, 2000)
```

## **Freelance Graphics: CreateStyle method**

{button ,AL('H\_CREATESTYLE\_METHOD\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;',0)} [See list of classes](#)

Create a new named style based on the attributes of the text block.

### **Syntax**

*textblockobject.CreateStyle(styleName)*

### **Parameters**

*styleName* as String

Name of the new style.

### **Return values**

None

## **Freelance Graphics: CreateSymbol method**

{button ,AL('H\_CREATESYMBOL\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS','0)} [See list of classes](#)

Add a symbol to the page.

### **Syntax**

*pageobject.CreateSymbol(x, y, width, height, filename, index)*

### **Parameters**

*x as Integer*

(Optional, see note) Left edge of the symbol relative to the left edge of the window, in twips.

*y as Integer*

(Optional, see note) Bottom edge of the symbol relative to the bottom of the window, in twips.

*width as Integer*

(Optional, see note) Width in twips.

*height as Integer*

(Optional, see note) Height in twips.

*filename as String*

Name of the file containing the symbol.

*index as Integer*

Sequence number of the symbol in the file.

**Note** If you omit the optional parameters, the symbol will be centered on the page.

### **Return values**

An instance of the DrawObject class (the symbol object).

## **Freelance Graphics: CreateTable method**

{button ,AL('H\_CREATETABLE\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Create a table on the page.

### **Syntax**

*pageobject.CreateTable(type, rows, columns, x, y, width, height)*

### **Parameters**

*type as Integer*

See the Create Table dialog's Table Gallery for examples of the following grid types.

<u>Value</u>	<u>Description</u>
1	Full grid
2	Grid except for first row and column
3	Outline around outside of table
4	No grid lines

*rows as Integer*

Number of rows.

*columns as Integer*

Number of columns.

*x as Integer*

(Optional, see note) Left edge of the table relative to the left edge of the window, in twips.

*y as Integer*

(Optional, see note) Bottom edge of the table relative to the bottom of the window, in twips.

*width as Integer*

(Optional, see note) Width in twips.

*height as Integer*

(Optional, see note) Height in twips.

**Note** If you omit the optional parameters, the table will be centered on the page.

### **Return values**

An instance of the Table class.

## **Freelance Graphics: CreateText method**

{button ,AL('H\_CREATETEXT\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Create a text block.

### **Syntax**

`pageobject.CreateText(x, y, width, height)`

### **Parameters**

*x* as Integer

(Optional, see note) Left edge of the text block relative to the left edge of the window, in twips.

*y* as Integer

(Optional, see note) Bottom edge of the text block relative to the bottom of the window, in twips.

*width* as Integer

(Optional, see note) Width in twips.

*height* as Integer

(Optional, see note) Height in twips.

**Note** If you omit the parameters, the text will be centered on the page.

### **Return values**

An instance of the DrawObject class.

## **Freelance Graphics: CutPage method**

{button ,AL('H\_CUTPAGE\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Cut a Page object and place it on the Clipboard.

### **Syntax**

*pageobject.CutPage*

### **Parameters**

None

### **Return values**

None

### **Examples**

`CurrentPage.CutPage`

## **Freelance Graphics: CutSelection method**

{button ,AL('H\_CUTSELECTION\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Cut the current selection and place it on the Clipboard.

### **Syntax**

*documentobject.CutSelection*

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentSelection.CutSelection

## **Freelance Graphics: Cut method**

{button ,AL('H\_CUT\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

Cut a DrawObject and place it on the Clipboard.

### **Syntax**

*drawobject.Cut*

### **Parameters**

None

### **Return values**

None

### **Examples**

```
Dim MyRect as DrawObject  
Set MyRect = CurrentPage.CreateRect()  
MyRect.Cut
```

## **Freelance Graphics: DeleteCol method**

{button ,AL('H\_DELETECOL\_METHOD\_MEMDEF\_RT;H\_TABLE\_CLASS;',0)} [See list of classes](#)

Delete a specified column from the table.

### **Syntax**

*tableobject.DeleteCol(column)*

### **Parameters**

*column as Integer*

Number of the column to delete.

### **Return values**

None

## **Freelance Graphics: DeletePage method**

{button ,AL('H\_DELETEPAGE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS','0)} [See list of classes](#)

Delete the specified page.

### **Syntax**

*documentobject.DeletePage(pageobject)*

### **Parameters**

*pageobject* as *Page*

The page to delete.

### **Return values**

None

## **Freelance Graphics: DeleteReviewer method**

{button ,AL('H\_DELETEREVIEWER\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Open the dialog box used to delete a TeamReview reviewer.

### **Syntax**

*documentobject*.DeleteReviewer

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: DeleteRow method**

{button ,AL('H\_DELETEROW\_METHOD\_MEMDEF\_RT;H\_TABLE\_CLASS','0)} [See list of classes](#)

Delete a specified row from the table.

### **Syntax**

*tableobject.DeleteRow(row)*

### **Parameters**

*row as Integer*

The number of the row to delete.

### **Return values**

None

## **Freelance Graphics: DeleteSpeakerNote method**

{button ,AL('H\_DELETESPEAKERNOTE\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS','0)} [See list of classes](#)

Delete speaker notes from the page.

### **Syntax**

*pageobject*.DeleteSpeakerNote

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentPage.DeleteSpeakerNote

## **Freelance Graphics: DistributeForComment method**

{button ,AL('H\_DISTRIBUTEFORCOMMENT\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Open the Distribute for Comment dialog box.

### **Syntax**

*documentobject*.DistributeForComment

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: EnterEditMode**

{button ,AL('H\_ENTEREDITMODE\_METHOD\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;',0)} [See list of classes](#)

Enter edit mode on a text block.

### **Syntax**

*textblockobject*.EnterEditMode

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: FindNextObject method**

{button ,AL('H\_FINDNEXTOBJECT\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Find the next occurrence of the specified named object on the Page.

**Note** Use FindObject to find the first occurrence of an object on a Page.

### **Syntax**

*pageobject*.FindNextObject(*objectname*, *afterme*)

### **Parameters**

*objectname* as String

Name of the object to find.

*afterme* as DrawObject

(Optional) The object after which to begin the search.

### **Return values**

An instance of the DrawObject class (the found object).

### **Examples**

```
Dim Rect2 as DrawObject  
Set Rect2 = CurrentPage.FindNextObject("MyRect")
```

## **Freelance Graphics: FindObject method**

{button ,AL('H\_FINDOBJECT\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Find the first occurrence of the specified named object in the Document or on the Page.

**Note** Use FindNextObject to find subsequent occurrences of an object on a Page.

### **Syntax**

*object*.FindObject(*objectname*)

### **Parameters**

*objectname* as String

Name of the object to fine.

### **Return values**

An instance of the DrawObject class.

### **Examples**

```
Dim Rect1 as DrawObject  
Set Rect1 = CurrentPage.FindObject("My Rect")
```

## **Freelance Graphics: Flip method**

{button ,AL('H\_FLIP\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

Flip the object top-to-bottom or left-to-right.

### **Syntax**

*drawobject*.Flip(*flipdirection*)

### **Parameters**

*flipdirection* as Variant (Enumerated)

<b>Value</b>	<b>Description</b>
\$FlipLeftToRight	Mirror the image on the vertical plane
\$FlipTopToBottom	Mirror the image on the horizontal plane

### **Return values**

None

### **Examples**

CurrentSelection.Flip(\$FlipLeftToRight)

## **Freelance Graphics: GetBulletCount method**

{button ,AL('H\_GETBULLETCOUNT\_METHOD\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;',0)} [See list of classes](#)

Return the number of bulleted items in the text block.

### **Syntax**

*textblock*.GetBulletCount

### **Parameters**

None

### **Return values**

Number of bullets (Integer)

## **Freelance Graphics: GetCell method**

{button ,AL('H\_GETCELL\_METHOD\_MEMDEF\_RT;H\_TABLE\_CLASS;',0)} [See list of classes](#)

Return the specified cell as a drawn object.

### **Syntax**

*tableobject.GetCell(row, column)*

### **Parameters**

*row as Integer*

Row number of the row containing the text.

*column as Integer*

Column number of the column containing the text.

### **Return values**

An instance of the TextBlock class.

## **Freelance Graphics: GetEnum method**

{button ,AL('H\_GETENUM\_METHOD\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

Resolve the specified enumerated type to its value. This is useful for cross-application scripts.

### **Syntax**

*applicationobject.GetEnum(enumerationname)*

### **Parameters**

*enumerationname* as *Variant*

An enumeration name as a string, with or without the \$.

### **Return values**

Value of the specified enumeration name.

### **Example**

`CurrentApplication.GetEnum("ViewDraw")`

## **Freelance Graphics: GetIndex method**

{button ,AL('H\_GETINDEX\_METHOD\_MEMDEF\_RT;H\_COLORS\_CLASS;H\_DOCUMENTS\_CLASS;H\_OBJECTS\_CLASS;H\_PAGES\_CLASS;','0)} [See list of classes](#)

Returns the index (e.g., the fifth object in the set).

### **Syntax**

*objectset*.GetIndex(*object*, *startingindex*)

### **Parameters**

*object* as *object*

The instance of the object whose index you want.

*startingindex* as *Integer*

Optional starting position in the set for the search.

### **Return values**

Integer indicating the object occurrence within the set of objects (for example, the page number of a specified page within the set of pages).

### **Example**

```
Dim ThisIndex as Integer  
ThisIndex = CurrentPage.Objects.GetIndex(MyRect)  
or  
Dim ThisIndex as Index  
ThisIndex = CurrentApplication.Colors.GetIndex(MyColor)
```

## **Freelance Graphics: GetMarkup method**

{button ,AL('H\_GETMARKUP\_METHOD\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;','0)} [See list of classes](#)

Return the text and all markup attributes from a TextBlock, as a string.

### **Syntax**

*textblockobject*.GetMarkup

### **Parameters**

None

### **Return values**

A string containing the text from a TextBlock object, and all markup attributes for that text.

## **Freelance Graphics: GetNearestColor method**

{button ,AL('H\_GETNEARESTCOLOR\_METHOD\_MEMDEF\_RT;H\_COLORS\_CLASS;','0)} [See list of classes](#)

Return the closest available color (in the Freelance Color Library) to the color specified.

### **Syntax**

*colorobject*.GetNearestColor(*colorobject*)

### **Parameters**

*colorobject* as *Color*

The *Color* object whose color you want to match as closely as possible.

### **Return values**

An object of the *Color* class that is the closest match to the passed color.

### **Example**

```
Dim MyLibraryColor as Color  
Dim MyColor as Color  
Set MyColor = CurrentApplication.Colors.RGBToColor(17395023)  
Set MyLibraryColor = CurrentApplication.Colors.GetNearestColor(MyColor)
```

## **Freelance Graphics: GetNearestIndex method**

{button ,AL('H\_GETNEARESTINDEX\_METHOD\_MEMDEF\_RT;H\_COLOR\_CLASS;','0)} [See list of classes](#)

Return the index of the closest available color for the color specified.

### **Syntax**

*colorobject*.GetNearestIndex(*colorobject*)

### **Parameters**

*colorobject* as *Color*

The Color object whose color you want to match as closely as possible.

### **Return values**

An integer containing the index of the Color class that is the closest match to the passed color.

## **Freelance Graphics: GetNthBullet method**

{button ,AL('H\_GETNTHBULLET\_METHOD\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;',0)} [See list of classes](#)

Return the text from the nth bulleted item within the text block.

### **Syntax**

*textblockobject*.**GetNthBullet(*n*)**

### **Parameters**

*n* as Integer

Sequence number of the bullet.

### **Return values**

A string containing the text from the nth bulleted item.

## **Freelance Graphics: GetObjectData method**

{button ,AL('H\_GETOBJECTDATA\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

Return user-defined object data (persistent, string-valued name and value pair).

### **Syntax**

*drawobject*.**GetObjectData**(*variablename*)

### **Parameters**

*variablename* as *String*

Name of a user-defined variable.

### **Return values**

String containing the value of the named variable.

## **Freelance Graphics: GetRGB method**

{button ,AL('H\_GETRGB\_METHOD\_MEMDEF\_RT;H\_COLOR\_CLASS;',0)} [See list of classes](#)

Return the RGB value of the color produced by the current values of the Red, Green, and Blue properties of a Color object.

### **Syntax**

*colorobject*.GetRGB

### **Parameters**

None

### **Return values**

Long, RGB value.

### **Examples**

```
Dim RGBValue as Long  
RGBValue = MyColor.GetRGB()
```

## **Freelance Graphics: GetSelection method**

{button ,AL('H\_GETSELECTION\_METHOD\_MEMDEF\_RT;H\_PAGESELECTION\_CLASS;H\_SELECTION\_CLASS;',  
0)} [See list of classes](#)

Returns the specified selected object from the set of currently selected objects.

### **Syntax**

*objectselection*.GetSelection(*objectnumber*)

### **Parameters**

*objectnumber* as Integer

The number of the object or page to be returned.

### **Return values**

The DrawObject at the specified index in the selection.

### **Examples**

```
'with at least two draw objects selected:  
Dim Rect2 as DrawObject  
Set Rect2 = Selection.GetSelection(2)
```

## **Freelance Graphics: GetSpeakerNoteMarkup method**

{button ,AL('H\_GETSPEAKERNOTE markup\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Return the text from the speaker notes from a page, including all markups.

### **Syntax**

*pageobject*.GetSpeakerNoteMarkup

### **Parameters**

None

### **Return values**

A string containing the text from the speaker notes for a page, and all markup attributes for that text.

## **Freelance Graphics: GotoNotes method**

{button ,AL('H\_GOTONOTES\_METHOD\_MEMDEF\_RT;H\_APPLICATIONWINDOW\_CLASS;',0)} [See list of classes](#)

Switch window focus to Lotus Notes. (If Notes is not running, it will be launched.)

### **Syntax**

*applicationwindow*.**GotoNotes**

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: GotoPage method**

{button ,AL('H\_GOTOPAGE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Go to the page specified by a page number, page name, or object name.

### **Syntax**

*documentobject*.GotoPage *pageindicator*

### **Parameters**

*pageindicator* as *Variant*

Page number (integer), page name (string), or Page object.

### **Return values**

None

### **Examples**

CurrentDocument.GotoPage(5)

## **Freelance Graphics: Group method**

{button ,AL('H\_GROUP\_METHOD\_MEMDEF\_RT;H\_SELECTION\_CLASS;','0)} [See list of classes](#)

Group currently selected objects.

### **Syntax**

*selectionobject*.Group

### **Parameters**

None

### **Return values**

A new instance of a grouped DrawObject.

### **Examples**

```
Dim MyGroup as DrawObject  
Set MyGroup = Selection.Group()
```

## **Freelance Graphics: Import method**

{button ,AL('H\_IMPORT\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)  
Import a file.

### **Syntax**

*documentobject.Import(filename, includewithfile, converttopostscript, includetemplate, codepage)*

### **Parameters**

*filename as String*

Name of the file to import.

*includewithfile as Integer (Enumerated)*

<u>Value</u>	<u>Description</u>
TRUE (-1)	Include the imported file with the presentation
FALSE (0)	Do not include the imported file (default)

*converttopostscript as Integer (Enumerated)*

<u>Value</u>	<u>Description</u>
TRUE (-1)	Convert the imported file to PostScript
FALSE (0)	Do not convert the imported file (default)

*includetemplate as Integer (Enumerated)*

<u>Value</u>	<u>Description</u>
TRUE (-1)	Include the imported template with the presentation
FALSE (0)	Do not include the imported template (default)

*codepage as integer*

Identifies a special code page for the import operation (defaults to 0).

### **Return values**

The imported object.

## **Freelance Graphics: InsertCol method**

{button ,AL('H\_INSERTCOL\_METHOD\_MEMDEF\_RT;H\_TABLE\_CLASS;',0)} [See list of classes](#)

Insert a new column as the specified column in a table.

### **Syntax**

*tableobject.InsertCol(newcolumnnumber)*

### **Parameters**

*newcolumnnumber* as Integer

The column number of the new column in the table.

### **Return values**

None

## **Freelance Graphics: InsertRow method**

{button ,AL('H\_INSERTROW\_METHOD\_MEMDEF\_RT;H\_TABLE\_CLASS;',0)} [See list of classes](#)

Insert a new row as the specified row in a table.

### **Syntax**

*tableobject.InsertRow(newrownumber)*

### **Parameters**

*newrownumber* as Integer

The row number of the new row in the table.

### **Return values**

None

## **Freelance Graphics: Insert method**

{button ,AL('H\_INSERT\_METHOD\_MEMDEF\_RT;H\_PLACEMENTBLOCK\_CLASS;',0)} [See list of classes](#)

Insert the specified object in a placement ("Click here...") block.

### **Syntax**

*placementblockobject.Insert object*

### **Parameters**

*object* as *DrawObject*

The object to be inserted in the "Click here..." block.

### **Return values**

None

## **Freelance Graphics: IsEmpty method**

{button ,AL('H\_ISEMPY\_METHOD\_MEMDEF\_RT;H\_COLORS\_CLASS;H\_DOCUMENTS\_CLASS;H\_OBJECTS\_C  
LASS;H\_PAGES\_CLASS;','0)} [See list of classes](#)

Test if a collection type object (Colors, Documents, Objects, or Pages) is empty (contains no items).

### **Syntax**

*objectcollection*.IsEmpty

### **Parameters**

None

### **Return values**

Integer (Boolean)

<u>Value</u>	<u>Description</u>
TRUE	There are no items in the object
FALSE	There are one or more items in the object

### **Examples**

```
If CurrentPage.Objects.IsEmpty() Then  
Print "There are no objects on this page"  
End If
```

## **Freelance Graphics: Item method**

{button ,AL('H\_ITEM\_METHOD\_MEMDEF\_RT;H\_COLORS\_CLASS;H\_DOCUMENTS\_CLASS;H\_OBJECTS\_CLASS;H\_PAGES\_CLASS';0)} [See list of classes](#)

Return an item from a collection type object (Colors, Documents, Objects, or Pages).

### **Syntax**

*objectcollection*.Item(*index*)

### **Parameters**

*index* as Variant

The index of the item to return, or the name of the color.

### **Return values**

An instance of the Color, Document, DrawObject, or Page class.

### **Examples**

```
Dim MyPage2 as Page  
Set MyPage2 = CurrentDocument.Pages.Item(2)
```

or

```
Dim MyBlueColor as Color  
Dim MyGreenColor as Color  
Set MyBlueColor = CurrentApplication.Colors.Item("Blue")  
Set MyGreenColor = CurrentApplication.Colors.Item(35)
```

## **Freelance Graphics: LeaveEditMode**

{button ,AL('H\_LEAVEEDITMODE\_METHOD\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;',0)} [See list of classes](#)

Leave edit mode for the text block (simulate clicking outside that block).

### **Syntax**

*textblockobject*.LeaveEditMode

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: Maximize method**

{button ,AL('H\_MAXIMIZE\_METHOD\_MEMDEF\_RT;H\_APPLICATIONWINDOW\_CLASS;H\_DOCWINDOW\_CLASS;' ,0)} [See list of classes](#)

Maximize the Freelance application or document window.

### **Syntax**

*windowobject*.Maximize

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentApplicationWindow.Maximize

or

CurrentDocWindow.Maximize

## **Freelance Graphics: Minimize method**

{button ,AL('H\_MINIMIZE\_METHOD\_MEMDEF\_RT;H\_APPLICATIONWINDOW\_CLASS;H\_DOCWINDOW\_CLASS;',  
0)} [See list of classes](#)

Minimize the Freelance application or document window.

### **Syntax**

*windowobject*.Minimize

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentApplicationWindow.Minimize

or

CurrentDocWindow.Minimize

## **Freelance Graphics: Move method**

{button ,AL('H\_MOVE\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Move an object to a new position on the page, or move a page to or before the specified page number.

### **Syntax**

*drawobject*.**Move** *xtwips, ytwips*

or

*pageobject*.**Move** *pagenumber, insertbefore*

### **Parameters**

*xtwips* as *Long*

Horizontal *twips* to move (positive moves to right, negative to left).

*ytwips* as *Long*

Vertical *twips* to move (positive moves up, negative down).

*pagenumber* as *Integer*

Page number of the new page, or page before which to insert the new page (see note).

*insertbefore* as *Integer* (*Enumerated*)

(Optional)

<u>Value</u>	<u>Description</u>
TRUE (-1)	Insert the page before the specified page number
FALSE (0)	(Default) Insert the page at the specified page number

### **Return values**

None

## **Freelance Graphics: NearestColorFromRGB method**

{button ,AL('H\_NEARESTCOLORFROMRGB\_METHOD\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

Return the Freelance Graphics palette color that is the closest match to the specified [RGB value](#).

### **Syntax**

*applicationobject*.NearestColorFromRGB(*rgbvalue*)

### **Parameters**

*rgbvalue* as *Long*

Any RGB value.

### **Return values**

An instance of the Color class.

### **Examples**

```
Dim MyColor as Color  
Set MyColor = CurrentApplication.NearestColorFromRGB(1598564)
```

## **Freelance Graphics: NewDocument method**

{button ,AL('H\_NEWDOCUMENT\_METHOD\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

Create a new presentation by showing the user interface, with optional parameters supplying default values or selections.

### **Syntax**

*applicationobject.NewDocument name, location, kind, mastername, masterlocation*

### **Parameters**

**Note** The first three parameters are ignored. You must save a document to name it.

*name as String*

Optional file name.

*location as Variant*

Optional location of the file.

*kind as String*

Optional file type.

*mastername as String*

Optional content topic set name.

*masterlocation as Variant*

Optional content topic set location (must contain a string).

### **Return values**

None

## **Freelance Graphics: OpenDocument method**

{button ,AL('H\_OPENDOCUMENT\_METHOD\_MEMDEF\_RT;H\_APPLICATION\_CLASS';,0)} [See list of classes](#)

Open a presentation for editing.

### **Syntax**

*applicationobject*.**OpenDocument** *name, location, kind, readonly, makevisible*

### **Parameters**

*name as String*

File name of the presentation file to be opened.

*location as Variant*

Optional path for the file (must contain a string; defaults to the working directory).

*kind as String*

Optional file type (defaults to PRZ).

*readonly as Integer* (Enumerated)

Optional read-only flag.

<b>Value</b>	<b>Description</b>
TRUE (-1)	Read-only
FALSE (0)	Read-write (default)

*makevisible as Integer* (Enumerated)

Ignored and always treated as TRUE (this parameter is declared for compatibility with Open methods in other Lotus products).

<b>Value</b>	<b>Description</b>
TRUE (-1)	Visible (default)
FALSE (0)	Invisible (ignored)

### **Return values**

None

## **Freelance Graphics: OpenPresForCopy method**

{button ,AL('H\_OPENPRESFORCOPY\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)

Open a presentation from which pages can be copied (using the presentation browser).

### **Syntax**

*documentobject*.OpenPresForCopy(*presentationname*)

### **Parameters**

*presentationname* as *String*

(Optional) Name of the presentation file to open in the browser.

### **Return values**

None

## **Freelance Graphics: PasteSelectedPages method**

{button ,AL('H\_PASTESELECTEDPAGES\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Paste into the document the page(s) copied by the SelectPageForCopy method.

### **Syntax**

*documentobject.PasteSelectedPages(startingpagenumber)*

### **Parameters**

*startingpagenumber as Integer*

The starting page number at which the selected pages are to be pasted.

### **Return values**

None

## **Freelance Graphics: PasteSpecial method**

{button ,AL('H\_PASTESPECIAL\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Paste the Clipboard contents onto the page using a special format (bitmap or chart, for example).

### **Syntax**

*pageobject.PasteSpecial(clipboardformat)*

### **Parameters**

*clipboardformat* as *String*

Any of the Clipboard formats displayed in the Paste Special dialog, or *OLE object* for an OLE object on the Clipboard.

### **Return values**

The pasted object (a new instance of the DrawObject class).

## **Freelance Graphics: Paste method**

{button ,AL('H\_PASTE\_METHOD\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

Paste the Clipboard contents onto the page or into the document.

### **Syntax**

*object.Paste(makevisible)*

### **Parameters**

*makevisible* as Integer (Enumerated)

Ignored and always treated as TRUE (this parameter is declared for compatibility with Paste methods in other Lotus products).

<b>Value</b>	<b>Description</b>
TRUE (-1)	Make the pasted page(s) visible (default)
FALSE (0)	Make the pasted page(s) invisible (ignored)

### **Return values**

If pasting to a Page, the pasted object (a new instance of the DrawObject class); if pasting to a Document, no return value.

## **Freelance Graphics: Play method**

{button ,AL('H\_PLAY\_METHOD\_MEMDEF\_RT;H\_MEDIA\_CLASS;',0)} [See list of classes](#)

Play a media object (a sound or a movie).

### **Syntax**

*mediaobject*.Play

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: PrintOut method**

{button ,AL('H\_PRINTOUT\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS','0)} [See list of classes](#)

Print the presentation.

### **Syntax**

*documentobject.Print frompage, topage, copies*

### **Parameters**

*frompage as Integer*

Starting page number to print.

*ttopage as Integer*

Ending page number to print.

*copies as Integer*

Number of copies to print.

### **Return values**

None

### **Usage**

This method is identical to the Print method.

## **Freelance Graphics: Print method**

{button ,AL('H\_PRINT\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Print the presentation.

### **Syntax**

*documentobject.Print frompage, topage, copies*

### **Parameters**

*frompage as Integer*

Starting page number to print.

*ttopage as Integer*

Ending page number to print.

*copies as Integer*

Number of copies to print.

### **Return values**

None

### **Usage**

This method is identical to the PrintOut method.

## **Freelance Graphics: PutIntoPlacementBlock method**

{button ,AL('H\_PUTINTOPLACEMENTBLOCK\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS','0)} [See list of classes](#)

Place an object in a "Click here..." block.

### **Syntax**

*drawobject.PutIntoPlacementBlock(placementblockid)*

### **Parameters**

*placementblockid as Integer*

An integer identifying the "Click here..." block.

### **Return values**

None

## **Freelance Graphics: Quit method**

{button ,AL('H\_QUIT\_METHOD\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

Exit Freelance Graphics.

### **Syntax**

*applicationobject.Quit*

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: RemoveFromSelection method**

{button ,AL('H\_REMOVEFROMSELECTION\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;H\_PAGESELECTIO  
N\_CLASS;H\_SELECTION\_CLASS;','0)} [See list of classes](#)

Remove the specified object from the set of currently selected objects.

### **Syntax**

*objectcollection*.RemoveFromSelection *object*

### **Parameters**

*object* as *DrawObject*

The object you want removed from the selection.

### **Return values**

None

### **Examples**

Selection.RemoveFromSelection MyRect2

## **Freelance Graphics: Remove method**

{button ,AL('H\_REMOVE\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;H\_PAGE\_CLASS','0)} [See list of classes](#)

Delete a DrawObject or Page object.

### **Syntax**

*object.Remove*

### **Parameters**

None

### **Return values**

None

### **Examples**

CurrentSelection.Remove

## **Freelance Graphics: Replicate method**

{button ,AL('H\_REPLICATE\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;H\_PAGE\_CLASS;','0)} [See list of classes](#)

Replicate an object.

### **Syntax**

*drawobject*.**Replicate**

### **Parameters**

None

### **Return values**

A new instance of the replicated object.

## **Freelance Graphics: Restore method**

{button ,AL('H\_RESTORE\_METHOD\_MEMDEF\_RT;H\_APPLICATIONWINDOW\_CLASS;H\_DOCWINDOW\_CLASS;' ,0)} [See list of classes](#)

Restore the Freelance Graphics application or document window.

### **Syntax**

*windowobject*.Restore

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: RevertToStyle method**

{button ,AL('H\_REVERTTOSTYLE\_METHOD\_MEMDEF\_RT;H\_BACKGROUND\_CLASS;H\_BORDER\_CLASS;H\_FONT\_CLASS;H\_LINESTYLE\_CLASS;H\_TEXTBLOCK\_CLASS','0)} [See list of classes](#)

Revert to the named style for a Background, Border, Font, LineStyle, or TextBlock object.

**Note** For this release, the RevertToStyle method has no effect any object class.

### **Syntax**

*object.RevertToStyle(attributename)*

### **Parameters**

*attributename* AS String

Optional input parameter.

### **Return values**

None

## **Freelance Graphics: RGBtoColor method**

{button ,AL('H\_RGBTOCOLOR\_METHOD\_MEMDEF\_RT;H\_COLORS\_CLASS;',0)} [See list of classes](#)

Return the Color class object that matches the RGB value specified.

### **Syntax**

*colorobject.RGBtoColor(colonumber)*

### **Parameters**

*colonumber* as *Long*

An RGB value.

### **Return values**

Color class object matching the RGB value specified.

### **Examples**

```
Dim MyColor as Color  
Set MyColor = CurrentApplication.Colors.RGBToColor(1598564)
```

## **Freelance Graphics: Rotate method**

{button ,AL('H\_ROTATE\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS','0)} [See list of classes](#)

Rotate the object a specified number of degrees around a specified anchor point.

### **Syntax**

*drawobject*.**Rotate** *xanchor*, *yanchor*, *degrees*

### **Parameters**

*xanchor* as *Long*

Horizontal coordinate of the anchor point in twips.

*yanchor* as *Long*

Vertical coordinate of the anchor point in twips.

*degrees* as *Double*

Degrees of rotation in a counterclockwise direction.

### **Return values**

None

## **Freelance Graphics: RunDialog method**

{button ,AL('H\_RUNDIALOG\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Launch one of five hard-coded dialogs.

### **Syntax**

*documentobject.RunDialog(dialogtype, dialogcaption, maintext, p4, p5, p6, p7, p8, p9, p10, p11, p12)*

### **Parameters and return values (by dialog type)**

The first three parameters are the same for all five dialog types. The usage of parameters 4-12 and the return values vary by dialog type. The common parameters are described first, followed by the dialog-specific parameters and return values for each dialog type.

This method always returns a packed 32-bit (integer) value. In the descriptions of the return values, bit 0 is the least significant bit of the integer.

#### **Common parameters**

For all dialogs the first three parameters are always the same.

*dialogtype as Integer*

<b>Value</b>	<b>Description</b>
1	Two radio buttons, each with an associated spinner control
2	Seven check boxes
3	Four radio buttons, optional second text box
4	Three check boxes, optional second text box
5	List box with up to seven items

*dialogcaption as String*

The text to display in the caption (title bar) of the dialog.

*maintext as String*

Instructional text for a display-only text box in the dialog.

The use of the remaining parameters varies depending on the value of first parameter (*dialogtype*).

**Note** Parameters 4-10 are always type String, although for some dialog types they contain string representations of numerics. Parameters 11 and 12 are always type Integer.

#### **Type 1 (two radio buttons, each with an associated spinner control) parameters**

<b>Parameter</b>	<b>Description</b>
<i>r</i>	
p4	String for first radio button
p5	String for second radio button
p6	String containing the number of the radio button selected initially
p7, p8	Unused
p9	String containing the first spinner minimum value
p10	String containing the first spinner maximum value
p11	Integer containing the second spinner minimum value
p12	Integer containing the second spinner maximum value

#### **Type 1 return values**

<b>Bit(s)</b>	<b>Description</b>
0-7	The value set by the spinner control for the selected radio button when the dialog was closed
8	The radio button selected on return:

	0 = first
	1 = second
9	How the user closed the box:
	0 = selected Cancel
	1 = selected OK
10-31	Unused

#### Type 2 (seven check boxes) parameters

<u>Parameter</u>	<u>Description</u>
r	
p4-p10	Strings for check boxes 1-7; each parameter is the string to display with the corresponding check box
p11	Initial state of the check boxes; the low-order seven bits of the integer indicate if box is marked: 1 = Marked initially 0 = Not marked initially Bits 7-31 are unused
p12	Unused

#### Type 2 return values

<u>Bit(s)</u>	<u>Description</u>
0-6	Indicates which boxes were selected on return: 0 = not selected 1 = selected
7	Unused
8	How the user closed the box: 0 = selected Cancel 1 = selected OK
9-31	Unused

#### Type 3 (four radio buttons, optional second text box) parameters

<u>Parameter</u>	<u>Description</u>
r	
p4-p7	Strings for radio buttons 1-4; each parameter is the string to display with the corresponding radio button
p8	String for optional second text block
p9-p12	Unused

#### Type 3 return values

<u>Bit(s)</u>	<u>Description</u>
0-2	A binary number indicating which radio button was selected on return (for example, 110 indicates that button three was selected)

3-7	Unused
8	How the user closed the box: 0 = selected Cancel 1 = selected OK
9-31	Unused

#### Type 4 (three check boxes, optional secondary text) parameters

Parameter	Description
r	
p4-p6	Strings for check boxes 1-3; each parameter is the string to display with the corresponding check box
p7	String for optional secondary text block
p8-p10	Unused
p11	Initial state of the check boxes; the low-order three bits of the integer indicate if box is marked: 1 = Marked initially 0 = Not marked initially Bits 4-31 are unused
p12	Unused

#### Type 4 return value

Bit(s)	Description
0-2	Indicates which boxes were selected on return: 0 = not selected 1 = selected
3-7	Unused
8	How the user closed the box: 0 = selected Cancel 1 = selected OK
9-31	Unused

#### Type 5 (list box with up to seven items) parameters

Parameter	Description
r	
p4-p10	Up to seven strings; each string is a separate entry in the list box
p11-p12	Unused

#### Type 5 return values

Bit(s)	Description
0-2	A binary number indicating which item in the list box was selected on return (for example, 110 indicates that item three was selected)

3-7    Unused  
8      How the user closed the box:  
      0 = selected Cancel  
      1 = selected OK  
9-31    Unused

### **Examples**

```
' Example of posting Dialog 2 and interpreting results...
DIM PackedVal as Integer
PackedVal = CurrentDocument.RunDialog (2, "DialogTitle", "StaticText",_
"CheckBox 1", "CheckBox 2", "CheckBox 3", "CheckBox 4", "CheckBox 5",_
"CheckBox 6", "CheckBox 7", FALSE, 0)
For I = 1 TO 7
    IF PackedVal AND (2^(I-1)) THEN
        Print "CheckBox "+Str$(I)+" was enabled."
    ELSE
        Print "CheckBox "+Str$(I)+" was disabled."
    END IF
NEXT I
```

## **Freelance Graphics: SameColor method**

{button ,AL('H\_SAMECOLOR\_METHOD\_MEMDEF\_RT;H\_COLOR\_CLASS;',0)} [See list of classes](#)

Compare the color of two Color class objects to determine if they have the same [RGB value](#).

### **Syntax**

*colorobject1*.SameColor(*colorobject2*)

### **Parameters**

*colorobject2* as *Color*

An object of class *Color*.

### **Return values**

Integer (Boolean).

<b>Value</b>	<b>Description</b>
TRUE	Same color
FALSE	Different colors

### **Examples**

```
If Color1.SameColor(Color2) Then  
    Print "Color2 is identical to Color1"  
End If
```

## **Freelance Graphics: SaveAs method**

{button ,AL('H\_SAVEAS\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS','0)} [See list of classes](#)

Save the current presentation in a new file.

### **Syntax**

*documentobject*.SaveAs(*filename*, *location*, *type*, *backup*)

### **Parameters**

*filename* as *String*

Optional file name.

*location* as *Variant*

Optional path in which to save the file.

*type* as *String*

(Optional) File type is ignored for this release. The actual type is always PRZ.

*backup* as *Integer*

Indicates if the file should be backed up.

<b>Value</b>	<b>Description</b>
TRUE (-1)	Back up the file
FALSE (0)	Do not back up the file

### **Return values**

None

## **Freelance Graphics: Save method**

{button ,AL('H\_SAVE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Save the current presentation.

### **Syntax**

*documentobject*.Save

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: SelectPageForCopy method**

{button ,AL('H\_SELECTPAGEFORCOPY\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Select for copying the specified page of a presentation opened with the OpenPresForCopy method.

### **Syntax**

*documentobject*.SelectPageForCopy(*pagenumber*)

### **Parameters**

*pagenumber* as Integer

The number of the page to select for copying.

### **Return values**

None

## **Freelance Graphics: Select method**

{button ,AL('H\_SELECT\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;H\_PAGESELECTION\_CLASS;H\_SELECTION\_CLASS;','0)} [See list of classes](#)

Select the specified document, page, or object.

### **Syntax**

*selectionclasstype*.Select(*object*)

### **Parameters**

*object as objecttype*

A Document, DrawObject, or Page object.

### **Return values**

None

### **Examples**

Selection.Select MyRect

## **Freelance Graphics: SetObjectData method**

{button ,AL('H\_SETOBJECTDATA\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

Set user-defined object data (persistent, string-valued name and value pair).

### **Syntax**

*drawobject*.**SetObjectData**(*variablename*, *variablevalue*)

### **Parameters**

*variablename* as *String*

The name for the variable.

*variablevalue* as *String*

The value for the variable.

### **Return values**

None

## **Freelance Graphics: SetViewMode method**

{button ,AL('H\_SETVIEWMODE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Set the view mode.

### **Syntax**

*documentobject*.**SetViewMode**(*mode*, *pagenumber*)

### **Parameters**

*mode* as Variant

<b>Value</b>	<b>Description</b>
\$ViewDraw	Draw view
\$ViewOutliner	Outliner view
\$ViewSorter	Page Sorter view
\$ViewSlideShow	Screen Show view

*pagenumber* as Integer

Page number to view.

### **Return values**

None

## **Freelance Graphics: Show method**

{button ,AL('H\_SHOW\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

Run a screen show.

### **Syntax**

*documentobject*.Show

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: StartGuidedTemplate method**

{button ,AL('H\_STARTGUIDEDTEMPLATE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)

Start using a content topic.

### **Syntax**

*documentobject*.StartGuidedTemplate

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: StopGuidedTemplate method**

{button ,AL('H\_STOPGUIDEDTEMPLATE\_METHOD\_MEMDEF\_RT;H\_DOCUMENT\_CLASS','0)} [See list of classes](#)

Stop using a content topic.

### **Syntax**

*documentobject*.StopGuidedTemplate

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: StopPlay method**

{button ,AL('H\_STOPPLAY\_METHOD\_MEMDEF\_RT;H\_MEDIA\_CLASS;',0)} [See list of classes](#)

Stop playing the media.

### **Syntax**

*mediaobject*.StopPlay

### **Parameters**

None

### **Return values**

None

## **Freelance Graphics: Stretch method**

{button ,AL('H\_STRETCH\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

Stretch the object.

### **Syntax**

*drawobject*.**Stretch**(*xanchor*, *yanchor*, *xstart*, *ystart*, *xfinish*, *yfinish*, *stretchmode*)

### **Parameters**

All x and y specifications are [twips](#).

*xanchor* as *Long*

Horizontal [coordinate](#) of the point from which the object will be stretched.

*yanchor* as *Long*

Vertical coordinate of the point from which the object will be stretched.

*xstart* as *Long*

Horizontal starting coordinate of the stretch vector.

*ystart* as *Long*

Vertical starting coordinate of the stretch vector.

*xfinish* as *Long*

Horizontal ending coordinate of the stretch vector.

*yfinish* as *Long*

Vertical ending coordinate of the stretch vector.

*stretchmode* as *Integer*

Must be zero.

### **Return values**

None

## **Freelance Graphics: Tile method**

```
{button ,AL('H_TILE_METHOD_MEMDEF_RT;H_APPLICATIONWINDOW_CLASS;H_DOCWINDOW_CLASS;','0)}  
See list of classes
```

Tile all Freelance Graphics or document MDI windows.

### **Syntax**

*windowobject.Tile*

### **Parameters**

None

### **Return values**

None

### **Examples**

```
CurrentApplicationWindow.Tile
```

## **Freelance Graphics: Ungroup method**

{button ,AL('H\_UNGROUP\_METHOD\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

Ungroup a grouped object.

### **Syntax**

*drawobject.Ungroup*

### **Parameters**

None

### **Return values**

None

### **Examples**

```
Dim MySel as Selection  
Set MySel = CurrentSelection  
MySel.Group  
MySel.Move(50,50)  
MySel.Ungroup
```

## **Freelance Graphics: ActiveDocument property**

{button ,AL('H\_ACTIVEDOCUMENT\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS','0)} [See list of classes](#)

(Read-only) Get the active presentation document.

### **Data type**

Document

### **Syntax**

*set documentobject = applicationobject.ActiveDocument*

### **Legal values**

Any instance of the Document class.

## **Freelance Graphics: ActiveDocWindow property**

{button ,AL('H\_ACTIVEDOCWINDOW\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the document window of the active presentation.

### **Data type**

DocWindow

### **Syntax**

`set documentwindow = applicationobject.ActiveDocWindow`

### **Legal values**

Any instance of the DocWindow class.

## **Freelance Graphics: ActivePage property**

{button ,AL('H\_ACTIVEPAGE\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the current page, or if in Page Sorter view, the selected page.

### **Data type**

Page

### **Syntax**

*set page = documentobject.ActivePage*

*set documentobject.ActivePage = page*

### **Legal values**

Any instance of the Page class.

## **Freelance Graphics: Active property**

{button ,AL('H\_ACTIVE\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the document is the active presentation.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *documentobject.Active*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Document is the active presentation
FALSE (0)	Document is not the active presentation

## **Freelance Graphics: ApplicationWindow property**

{button ,AL('H\_APPLICATIONWINDOW\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the Freelance Graphics application window.

### **Data type**

ApplicationWindow

### **Syntax**

`set applicationwindow = applicationobject.ApplicationWindow`

### **Legal values**

Any instance of the ApplicationWindow class.

## **Freelance Graphics: Application property**

{button ,AL('H\_APPLICATION\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;H\_DOCUMENT\_CLASS;H\_B  
ASEOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the application.

### **Data type**

Application

Document

String

### **Syntax**

**set object = objecttype.Application**

### **Legal values**

Any instance of the Application or Document class; for the BaseObject class, returns "CurrentApplication."

## **Freelance Graphics: Author property**

{button ,AL('H\_AUTHOR\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the author of the presentation.

### **Data type**

String

### **Syntax**

*authorname* = *documentobject.Author*

*documentobject.Author* = *authorname*

### **Legal values**

Any string value.

## **Freelance Graphics: AutoSaveInterval property**

{button ,AL('H\_AUTOSAVEINTERVAL\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the number of minutes between automatic saves.

**Note** Used only if AutoSave property is TRUE (non-0).

### **Data type**

Integer

### **Syntax**

*autosaveinterval* = *preferencesobject*.AutoSaveInterval  
*preferencesobject*.AutoSaveInterval = *autosaveinterval*

### **Legal values**

Any integer.

### **Examples**

CurrentApplication.Preferences.AutoSaveInterval = 5

## **Freelance Graphics: AutoSave property**

{button ,AL('H\_AUTOSAVE\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Automatic save preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.Autosave*  
*preferencesobject.Autosave* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Perform automatic saves
FALSE (0)	Do not perform automatic saves

### **Usage**

The time interval for automatic saves is stored in the AutoSaveInterval property.

### **Examples**

```
CurrentApplication.Preferences.AutoSave = True
```

## **Freelance Graphics: AutoTime property**

{button ,AL('H\_AUTOTIME\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

(Read-write) During a screen show, controls whether the page displays for the time interval specified in the *pageobject.Delay* property.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *pageobject.AutoTime*

*pageobject.AutoTime* = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Page displays for the default time interval specified in <i>pageobject.Delay</i>
FALSE (0)	Page remains displayed until the user selects another page

## **Freelance Graphics: BackColor property**

{button ,AL('H\_BACKCOLOR\_PROPERTY\_MEMDEF\_RT;H\_BACKGROUND\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the background color of a drawn object.

### **Data type**

Color

### **Syntax**

```
set color = backgroundobject.BackColor  
set backgroundobject.BackColor = color
```

### **Legal values**

Any instance of the Color class.

### **Examples**

```
Dim MyColor as Color  
Set MyColor = MyRect1.Background.BackColor  
Set MyRect2.Background.BackColor = MyColor
```

## **Freelance Graphics: Background property**

{button ,AL('H\_BACKGROUND\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the Background property of the object.

### **Data type**

Background

### **Syntax**

```
set background = drawobject.Background  
set drawobject.Background = background
```

### **Legal values**

Any instance of the Background class.

### **Usage**

You can set a Background to an existing Background, or you can set the individual properties (BackColor, Color, and Pattern) of the Background class.

### **Examples**

```
Dim MyBackgroundStyle as Background  
Set MyBackgroundStyle = MyRect.Background  
Set MyOval.Background = MyBackgroundStyle
```

## **Freelance Graphics: BackupDir property**

{button ,AL('H\_BACKUPDIR\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the backup directory preference.

### **Data type**

String

### **Syntax**

*backupdirectory* = *preferencesobject.BackupDir*

*preferencesobject.BackupDir* = *backupdirectory*

### **Legal values**

Any directory.

### **Examples**

```
CurrentApplication.Preferences.BackUpDir = "c:\backup"
```

## **Freelance Graphics: BlackWhitePal property**

{button ,AL('H\_BLACKWHITEPAL\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the Black-and-white or Color palette flag.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.BlackWhitePal*  
*preferencesobject.BlackWhitePal* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Enable black-and-white palette
FALSE (0)	Disable black-and-white palette

### **Examples**

`CurrentApplication.Preferences.BlackWhitePal = True`

## **Freelance Graphics: Blue property**

{button ,AL('H\_BLUE\_PROPERTY\_MEMDEF\_RT;H\_COLOR\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the amount of blue in a Color object.

### **Data type**

Integer

### **Syntax**

*blueamount* = *colorobject.Blue*

### **Legal values**

0 (no blue) to 255 (maximum blue).

### **Examples**

```
Dim AmountOfBlue as Integer  
AmountOfBlue = MyRect.Background.Color.Blue
```

## **Freelance Graphics: Bold property**

{button ,AL('H\_BOLD\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine if the font is bold.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *fontobject.Bold*

*fontobject.Bold* = *value*

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Bold
FALSE (0)	Not bold

### **Examples**

MyText.TextBlock.Font.Bold = True

## **Freelance Graphics: BorderDisplay property**

{button ,AL('H\_BORDERDISPLAY\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the border display preference.

### **Data type**

Integer (Variant)

### **Syntax**

*borderdisplay* = *preferencesobject.BorderDisplay*

*preferencesobject.BorderDisplay* = *borderdisplay*

### **Legal values**

<b>Value</b>	<b>Description</b>
\$BorderDispMargin	Display drawing area border (recommended)
\$BorderDispPrintableArea	Display printable area border
\$BorderDispNone	Display no border

### **Examples**

```
CurrentApplication.Preferences.BorderDisplay = $BorderDispPrintableArea
```

## **Freelance Graphics: Border property**

{button ,AL('H\_BORDER\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the Border style for a drawing object.

### **Data type**

Border

### **Syntax**

```
set border = drawobject.Border  
set drawobject.Border = border
```

### **Legal values**

Any instance of the Border class.

### **Usage**

You can set a Border to an existing Border, but more commonly you will set the individual properties (Color, Pattern, and Width) of the Border class.

### **Examples**

```
Set MyRect2.Border = MyRect1.Border  
or  
MyRect1.Border.Width = $ltsBorderWidthThin
```

## **Freelance Graphics: BuildBullets property**

{button ,AL('H\_BUILDBULLETS\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determines if a text block is to be made into a bullet build during a screen show.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject.Buildbullets*

*drawobject.BuildBullets* = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Make text block into a bullet build during a screen show
FALSE (0)	Do not make text block into a bullet build during a screen show

## **Freelance Graphics: BulletProperties property**

{button ,AL('H\_BULLETPROPERTIES\_PROPERTY\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the bullet properties for a text block.

### **DataType**

BulletProperties

### **Syntax**

`set bulletproperties = textblockobject.BulletProperties`

### **Legal values**

Any instance of the BulletProperties class.

### **Usage**

You can access or set the individual properties (Color, ShadowColor, ShadowDepth, and so on) of the BulletProperties class.

## **Freelance Graphics: Case property**

{button ,AL('H\_CASE\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the font case (upper or lower).

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer

### **Syntax**

*fontcase* = *fontobject*.Case

*fontobject*.Case= *fontcase*

### **Legal values**

Any integer (always returns zero).

## **Freelance Graphics: Changed property**

{button ,AL('H\_CHANGED\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine if the document has changed.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *documentobject.Changed*

*documentobject.Changed* = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Document changed
FALSE (0)	Document has not been changed

## **Freelance Graphics: Chart property**

{button ,AL('H\_CHART\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the Chart property for a drawing object.

**Note** The Freelance Graphics Chart class is derived from the DrawObject class, and has all the properties and methods of the LotusChart ChartBase class. For more information about the LotusChart ChartBase class, see the Help contents under LotusScript, LotusChart LotusScript Reference, By Category, Classes.

### **Data type**

Chart

### **Syntax**

`set chart = drawobject.Chart`

### **Legal values**

Any instance of the Chart class.

## **Freelance Graphics: CodePage property**

{button ,AL('H\_CODEPAGE\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the code page preference.

### **Data type**

Integer

### **Syntax**

*codepage* = *preferencesobject.CodePage*

*preferencesobject.Author* = *codepage*

### **Legal values**

<b>Value</b>	<b>Description</b>
0	System setting
437	U.S. English
850	Multilingual (Latin I)
852	Slavic (Latin II)
860	Portuguese
863	Canadian French
865	Norwegian

## **Freelance Graphics: ColCount property**

{button ,AL('H\_COLCOUNT\_PROPERTY\_MEMDEF\_RT;H\_TABLE\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the number of columns in a table.

### **Data type**

Integer

### **Syntax**

*columns* = *tableobject*.ColCount

### **Legal values**

Any positive integer.

## **Freelance Graphics: Colors property**

{button ,AL('H\_COLORS\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the color palette for an application.

### **Data type**

Colors

### **Syntax**

`set colorpalette = colorsobject.Colors`

### **Legal values**

Any instance of the Colors class.

### **Usage**

You can use this property to retrieve palettecolors using the RGBToColor, Item, and GetNearestColor methods.

### **Examples**

```
Dim MyPeachColor as Color  
Set MyPeachColor = CurrentApplication.Colors.Item(178)  
Set MyPeachColor = CurrentApplication.Colors.Item("peach")  
Set MyPeachColor = CurrentApplication.Colors.RGBToColor(16764301)
```

## **Freelance Graphics: Color property**

{button ,AL('H\_COLOR\_PROPERTY\_MEMDEF\_RT;H\_BACKGROUND\_CLASS;H\_BORDER\_CLASS;H\_BULLET\_PROPERTIES\_CLASS;H\_LINESTYLE\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the color for a background, border, bullet, or line style.

### **Data type**

Color

### **Syntax**

**set color = object.Color**

**set object.Color = color**

### **Legal values**

Any instance of the Color class.

### **Usage**

You can set a Color to an existing Color, or you can use the RGBtoColor method to create a new Color from a combination of red, green, and blue. However, once you define a Color object in Freelance Graphics, you cannot modify its Red, Green, or Blue properties individually.

### **Examples**

```
Dim MyColor as Color  
Set MyColor = MyLine.LineStyle.Color  
Set MyRect.Background.Color = MyColor
```

## **Freelance Graphics: Count property**

{button ,AL('H\_COUNT\_PROPERTY\_MEMDEF\_RT;H\_COLORS\_CLASS;H\_DOCUMENTS\_CLASS;H\_OBJECTS\_C  
LASS;H\_PAGES\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the number of open presentations, the number of objects in a collection, the number of colors in the palette, or the number of pages in a collection.

### **Data type**

Integer

### **Syntax**

*count = object.Count*

### **Legal values**

Any integer.

### **Examples**

```
Print "There are " + str$(CurrentDocument.Pages.Count) + " pages in this document."
```

or

```
Dim NumObjs as Integer  
NumObjs = CurrentPage.Objects.Count
```

## **Freelance Graphics: CurrentPrinter property**

{button ,AL('H\_CURRENTPRINTER\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the name of the current printer for an application.

### **Data type**

String

### **Syntax**

*printername* = *applicationobject*.CurrentPrinter

### **Legal values**

Any printer name.

## **Freelance Graphics: DefaultFilePath property**

{button ,AL('H\_DEFAULTFILEPATH\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the application's default file path.

### **Data type**

String

### **Syntax**

*defaultfilepath* = *applicationobject.DefaultFilePath*

### **Legal values**

Any file path.

### **Examples**

```
Print "The default file path is " + CurrentApplication.DefaultFilePath
```

## **Freelance Graphics: Delay property**

{button ,AL('H\_DELAY\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;H\_PAGE\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the time delay (in seconds) for a drawing object or page transition during a screen show. For a page, this delay is used only when *pageobject.AutoTime* is TRUE (non-0).

### **Data type**

Integer

### **Syntax**

*secondsdelay* = *object.Delay*  
*object .Delay* = *secondsdelay*

### **Legal values**

Any positive integer.

## **Freelance Graphics: Description property**

{button ,AL('H\_DESCRIPTION\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;H\_BASEOBJECT\_CLASS;','0')}  
[See list of classes](#)

(Read-write) Get or set the description of the presentation stored in the document, or get the class name of an object.

**Note** Read-only for the BaseObject class.

### **Data type**

String

### **Syntax**

*description = object.Description*  
*documentobject.Description = description*

### **Legal values**

Any string value (for the Document class) or the name of a class (for the BaseObject class).

## **Freelance Graphics: DimPrevious property**

{button ,AL('H\_DIMPREVIOUS\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;')0} [See list of classes](#)

(Read-write) Determines if the previous items in a bulleted list are to be dimmed during a bullet build (during a screen show).

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.DimPrevious

*drawobject*.DimPrevious = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Dim the previous bullets
FALSE (0)	Do not dim the previous bullets

## **Freelance Graphics: DisplayCoords property**

{button ,AL('H\_DISPLAYCOORDS\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Display coordinates preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*displaycoordinates* = *preferencesobject.DisplayCoords*

*preferencesobject.DisplayCoords* = *displaycoordinates*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Display the coordinates
FALSE (0)	Do not display the coordinates

### **Examples**

```
CurrentApplication.Preferences.DisplayCoords = True
```

## **Freelance Graphics: DisplayDrawRuler property**

{button ,AL('H\_DISPLAYDRAWRULER\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the Display drawing ruler preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.DisplayDrawRuler*  
*preferencesobject.DisplayDrawRuler* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Display the drawing ruler
FALSE (0)	Do not display the drawing ruler

### **Examples**

```
CurrentApplication.Preferences.DisplayDrawRuler = True
```

## **Freelance Graphics: DisplayGrid property**

{button ,AL('H\_DISPLAYGRID\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Display grid preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.DisplayGrid*

*preferencesobject.DisplayGrid* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Display grid
FALSE (0)	Do not display grid

### **Examples**

```
CurrentApplication.Preferences.DisplayGrid = True
```

## **Freelance Graphics: DisplayTextRuler property**

{button ,AL('H\_DISPLAYTEXTRULER\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the Display text ruler preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.DisplayTextRuler*

*preferencesobject.DisplayTextRuler* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Display text ruler
FALSE (0)	Do not display text ruler

### **Examples**

```
CurrentApplication.Preferences.DisplayTextRuler = True
```

## **Freelance Graphics: DocName property**

{button ,AL('H\_DOCNAME\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the document (file) name for the presentation.

### **Data type**

String

### **Syntax**

*documentname* = *documentobject.DocName*

*documentobject.DocName* = *documentname*

### **Legal values**

Any string value.

## **Freelance Graphics: Documents property**

{button ,AL('H\_DOCUMENTS\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS','0)} [See list of classes](#)

(Read-only) Get the collection of open presentations.

### **Data type**

Documents

### **Syntax**

`set documentcollection = applicationobject.Documents`

### **Legal values**

Any instance of the Documents class (a collection of Document objects).

### **Examples**

```
ForAll doc in CurrentApplication.Documents
    Print doc.DocName
End ForAll
or
Dim num as Integer
num = CurrentApplication.Documents.Count
Print "There are " + str$(num) + " presentations open."
```

## **Freelance Graphics: Document property**

{button ,AL('H\_DOCUMENT\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the document containing the page.

### **Data type**

Document

### **Syntax**

`set documentobject = pageobject.Document`

### **Legal values**

Any instance of the Document class.

### **Usage**

You can set a Document object to an existing Document, or you can set the individual properties (Author, Description, Location, and so on) of the Document class.

## **Freelance Graphics: DocWindow property**

{button ,AL('H\_DOCWINDOW\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the document window size (width and height).

### **Data type**

DocWindow

### **Syntax**

*set documentwindow = documentobject.DocWindow*

### **Legal values**

Any instance of the DocWindow class.

### **Usage**

You can set a DocWindow to an existing DocWindow, or you can set the individual properties (Height or Width) of the DocWindow class.

## **Freelance Graphics: DoubleUnderline property**

{button ,AL('H\_DOUBLEUNDERLINE\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the Double underline (two lines under both words and spaces) font property.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *fontobject.DoubleUnderline*

*fontobject.DoubleUnderline* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Double underline
FALSE (0)	No double underline

## **Freelance Graphics: Embedded property**

{button ,AL('H\_EMBEDDED\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the object is embedded.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *documentobject.Embedded*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Embedded object
FALSE (0)	Not an embedded object

## **Freelance Graphics: Exclude property**

{button ,AL('H\_EXCLUDE\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine if the page is excluded from the screen show.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *pageobject.Exclude*

*pageobject.Exclude* = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Excluded from screen show
FALSE (0)	Not excluded from screen show

## **Freelance Graphics: ExeName property**

{button ,AL('H\_EXENAME\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the executable to launch from an object during a screen show.

### **Data type**

String

### **Syntax**

```
executablename = drawobject.ExeName  
drawobject.ExeName = executablename
```

### **Legal values**

Any legal executable name.

## **Freelance Graphics: FirstIndent property**

{button ,AL('H\_FIRSTINDENT\_PROPERTY\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the First indent property for the text (the number of twips the first line of text is to be indented).

### **Data type**

Integer

### **Syntax**

*indentation* = *textobject*.FirstIndent

*textobject*.FirstIndent = *indentation*

### **Legal values**

Any integer.

### **Usage**

Use the Paralndent property to set the amount of space you want each paragraph indented.

## **Freelance Graphics: FontColor property**

{button ,AL('H\_FONTCOLOR\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the color for a font.

### **Data type**

Color

### **Syntax**

`set color = fontobject.FontColor`

`set fontobject.Color = color`

### **Legal values**

Any instance of the Color class.

### **Usage**

You can set a FontColor to an existing Color, or you can use the Colors class to set a FontColor to a Color from the Freelance Graphics palette.

### **Examples**

`Set MyTextObject1.TextBlock.Font.FontColor = MyColor`

`Set MyTextObject2.TextBlock.Font.FontColor = CurrentApplication.Colors.Item(178)`

## **Freelance Graphics: FontName property**

{button ,AL('H\_FONTNAME\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the Font name for a Font class.

### **Data type**

String

### **Syntax**

*fontname* = *fontobject.FontName*

*fontobject.FontName* = *fontname*

### **Legal values**

Any valid font name.

### **Examples**

```
MyTextObject.TextBlock.Font.FontName = "Arial"
```

## **Freelance Graphics: FontUnit property**

{button ,AL('H\_FONTUNIT\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the font units of measurement for an application. For Freelance Graphics, this is always points.

### **Data type**

Variant

### **Syntax**

*fontunit* = *applicationobject.FontUnit*  
*applicationobject.FontUnit* = *fontunit*

### **Legal values**

The only legal value is \$ItsScaleModePoint.

## **Freelance Graphics: Font property**

{button ,AL('H\_FONT\_PROPERTY\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;H\_TEXTPROPERTIES\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine the font property for the TextProperties or TextBlock class.

### **Data type**

Font

### **Syntax**

**set font = object.Font**

**set object.Font = font**

### **Legal values**

Any instance of the Font class.

### **Usage**

You can set a Font to an existing Font, or you can set the individual properties (Bold, Case, FontColor, and so on) of the Font class.

### **Examples**

```
Dim MyFont as Font  
Set MyFont = MyTextObject.TextBlock.Font  
MyFont.Bold = True  
Set MyTextObject2.TextBlock.Font = MyFont
```

## **Freelance Graphics: FullName property**

{button ,AL('H\_FULLSCREEN\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the full application or document path name (the full path name includes the executable file name).

### **Data type**

String

### **Syntax**

*fullname* = *object.FullName*

### **Legal values**

Any valid full path name.

## **Freelance Graphics: Green property**

{button ,AL('H\_GREEN\_PROPERTY\_MEMDEF\_RT;H\_COLOR\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the amount of green in a Color object.

### **Data type**

Integer

### **Syntax**

*greenamount* = *colorobject.Green*

*colorobject.Green* = *greenamount*

### **Legal values**

0 (no green) to 255 (maximum green).

### **Examples**

```
Dim AmountOfGreen as Integer  
AmountOfGreen = MyRect.Background.Color.Green
```

## **Freelance Graphics: Height property**

{button ,AL('H\_HEIGHT\_PROPERTY\_MEMDEF\_RT;H\_APPLICATIONWINDOW\_CLASS;H\_DOCWINDOW\_CLASS;  
H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the application window, document window, or drawing object height, in [twips](#).

### **Data type**

Integer (AppWindow, DocWindow classes)

Long (DrawObject class)

### **Syntax**

*twipshigh* = *object*.**Height**

### **Legal values**

Any positive value.

## **Freelance Graphics: HorizontalAlignment property**

{button ,AL('H\_HORIZONTALALIGNMENT\_PROPERTY\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the horizontal alignment property for the text.

### **Data type**

Variant (Enumerated)

### **Syntax**

*horizontalalignment* = *textobject.HorizontalAlignment*

**HorizontalAlignment** = *horizontalalignment*

### **Legal values**

<b>Value</b>	<b>Description</b>
\$ItsAlignmentLeft	Left aligned
\$ItsAlignmentRight	Right aligned
\$ItsAlignmentHorizCenter	Centered horizontally
\$ItsAlignmentJustify	Fit between margins

## **Freelance Graphics: ID property**

{button ,AL('H\_ID\_PROPERTY\_MEMDEF\_RT;H\_PLACEMENTOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the ID for a "Click here..." block.

### **Data type**

Integer

### **Syntax**

*idnumber* = *placementblockobject.ID*

### **Legal values**

Any "Click here..." block number.

## **Freelance Graphics: Image property**

{button ,AL('H\_IMAGE\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only)Get the image properties for a drawing object. This property is valid only if *DrawImageRef*.*IsImage* is TRUE (non-0).

### **Data type**

Image

### **Syntax**

`set image = drawobject.Image`

### **Legal values**

Any instance of the Image class.

### **Usage**

You can set an Image to an existing Image, or you can set the individual properties (Brightness, Contrast, Sharpness, and so on) of the Image class.

## **Freelance Graphics: Interactive property**

{button ,AL('H\_INTERACTIVE\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the application is interactive. For Freelance Graphics, this value is always TRUE (non-0).

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *applicationobject*.Interactive

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Interactive
FALSE (0)	Not interactive

## **Freelance Graphics: IsChart property**

{button ,AL('H\_ISCHART\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the object is a chart object.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsChart

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Chart
FALSE (0)	Not a chart

## **Freelance Graphics: IsDraggable property**

{button ,AL('H\_ISDRAGGABLE\_PROPERTY\_MEMDEF\_RT;H\_BASEOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the object is draggable.

**Note** Not implemented for this release.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *object*.IsDraggable

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Draggable
FALSE (0)	Not draggable

## **Freelance Graphics: IsGroup property**

{button ,AL('H\_ISGROUP\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Determine if the object is a grouped object.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsGroup

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Grouped
FALSE (0)	Not grouped

### **Examples**

```
If Selection.IsGroup Then
    Print "Selected DrawObject is a Grouped object."
    Selection.UnGroup
End If
```

## **Freelance Graphics: IsImage property**

{button ,AL('H\_ISIMAGE\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Determine if the object is an image object (a bitmap or graphics metafile, for example).

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsImage

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Image
FALSE (0)	Not an image

## **Freelance Graphics: IsMedia property**

{button ,AL('H\_ISMEDIA\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) TRUE if object is a media object (a movie or sound, for example).

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsMedia

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Movie or sound object
FALSE (0)	Not a movie or sound object

## **Freelance Graphics: IsOleObj property**

{button ,AL('H\_ISOLEOBJ\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the object is an OLE object.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsOleObj

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	OLE object
FALSE (0)	Not an OLE object

## **Freelance Graphics: IsOpen property**

{button ,AL('H\_ISOPEN\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the presentation document is currently open. In Freelance Graphics, this is always TRUE (non-0).

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *documentobject*.**IsOpen**

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Open
FALSE (0)	Not open

## **Freelance Graphics: IsPlacementBlock property**

{button ,AL('H\_ISPLACEMENTBLOCK\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Determine if the object is a "Click here..." block.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsPlacementBlock

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	"Click here..." block
FALSE (0)	Not a "Click here..." block

## **Freelance Graphics: IsSelectable property**

{button ,AL('H\_ISSELECTABLE\_PROPERTY\_MEMDEF\_RT;H\_BASEOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the object can be selected.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *object*.IsSelectable

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Selectable (objects of the DrawObject and Page classes)
FALSE (0)	Not selectable (all other classes)

## **Freelance Graphics: IsTable property**

{button ,AL('H\_ISTABLE\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Determine if the object is a table object.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsTable

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Table
FALSE (0)	Not a table

## **Freelance Graphics: IsText property**

{button ,AL('H\_ISTEXT\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Determine if the object is a text object

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.IsText

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Text object
FALSE (0)	Not a text object

## **Freelance Graphics: IsValid property**

{button ,AL('H\_ISVALID\_PROPERTY\_MEMDEF\_RT;H\_BASEOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Determine if the object is valid (still available).

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *object*.IsValid

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Valid
FALSE (0)	Not valid

### **Examples**

The following example prints the value zero (FALSE):

```
MyRect.Cut  
Print MyRect.IsValid
```

## **Freelance Graphics: Italic property**

{button ,AL('H\_ITALIC\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the italic attribute for the font.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *font.Italic*  
*font.Italic* = *value*

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Italicized
FALSE (0)	Not italicized

### **Examples**

MyTextObject.TextBlock.Font.Italic = True

## **Freelance Graphics: Layout property**

{button ,AL('H\_LAYOUT\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the layout used by the page.

### **Data type**

String

### **Syntax**

*layoutname* = *pageobject*.Layout

*pageobject*.Layout = *layoutname*

### **Legal values**

Any existing page layout name. Use a zero-length string ("") to refer to the [Blank Page] layout.

**Tip** Use the Freelance Graphics user interface to display all page layout names.

## **Freelance Graphics: Left property**

{button ,AL('H\_LEFT\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the left edge of the object, in twips.

### **Data type**

Long

### **Syntax**

*lefttwip* = *drawobject*.Left

### **Legal values**

Any positive value.

## **Freelance Graphics: LineLead property**

{button ,AL('H\_LINELEAD\_PROPERTY\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the line leading for the text (the number of points between line skips).

### **Data type**

Integer

### **Syntax**

*lineleading* = *textobject*.LineLead

*textobject*.LineLead= *lineleading*

### **Legal values**

Any positive integer.

## **Freelance Graphics: LineStyle property**

{button ,AL('H\_LINESTYLE\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the line style property.

### **Data type**

LineStyle

### **Syntax**

```
set linestyleobject = drawobject.LineStyle  
set drawobject.LineStyle = linestyleobject
```

### **Legal values**

You can set a LineStyle to an existing LineStyle, or you can set the individual properties (Color, Pattern, and Width) of the LineStyle class.

### **Examples**

```
MyLine1.LineStyle.Width = $ltsBorderWidthThin  
Set MyLine2.LineStyle = MyLine1.LineStyle
```

## **Freelance Graphics: Location property**

{button ,AL('H\_LOCATION\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;H\_DOCUMENT\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the default application or document path.

### **Data type**

String

### **Syntax**

*path* = *object.Location*

*object .Location* = *path*

### **Legal values**

Any valid path name.

## **Freelance Graphics: Media property**

{button ,AL('H\_MEDIA\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the Media class properties for an object. This property is valid only if *drawobject.isMedia* is TRUE (non-0).

### **Data type**

Media

### **Syntax**

```
set media = drawobject.Media  
set drawobject.Media = media
```

### **Legal values**

Any instance of the Media class.

## **Freelance Graphics: Name property**

{button ,AL('H\_NAME\_PROPERTY\_MEMDEF\_RT;H\_COLOR\_CLASS;H\_DRAWOBJECT\_CLASS;H\_PAGE\_CLASS  
;H\_BASEOBJECT\_CLASS';,0)} [See list of classes](#)

(Read-write) Get or set the page or drawing object name; or get the name of any other type of Freelance Graphics object.

**Note** Read-only except for the Page and DrawObject classes.

### **Data type**

String

### **Syntax**

*name* = *object*.Name

*object*.Name = *name*

### **Legal values**

Any ASCII string value, but may not contain a semi-colon (;) or an equal sign (=).

### **Examples**

```
Dim MyRect as DrawObject
Selection.name = "purple rectangle"
Set MyRect = CurrentPage.FindObject("purple rectangle")
CurrentPage.name = "My Title Page"
Print CurrentPage.Name
```

## **Freelance Graphics: Number property**

{button ,AL('H\_NUMBER\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the page number.

### **Data type**

Integer

### **Syntax**

*pagenumber* = *pageobject*.Number

*pageobject*.Number = *pagenumber*

### **Legal values**

From 1 to the number of pages in the presentation.

### **Usage**

To move a page, set the page number to the new page number.

## **Freelance Graphics: Objects property**

{button ,AL('H\_OBJECTS\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

(Read-only) Get a collection of drawing objects on a page.

### **Data type**

ObjectCollection

### **Syntax**

**set objectcollection = pageobject.Objects**

### **Legal values**

Any collection of objects.

### **Examples**

```
ForAll objs in CurrentPage.Objects
    Print obj.name
End ForAll

Dim num as Integer
num = MyPage2.Objects.Count
Print "There are " + str$(num) + " objects on page 2."
```

## **Freelance Graphics: OffsetReplicate property**

{button ,AL('H\_OFFSETREPLICATE\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the Offset replicate preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.OffsetReplicate*  
*preferencesobject.OffsetReplicate* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Offset copy from original
FALSE (0)	Place copy on top of original

### **Examples**

```
CurrentApplication.Preferences.OffsetReplicate = True
```

## **Freelance Graphics: OleObject property**

{button ,AL('H\_OLEOBJ\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Get an OLE object.

### **Data type**

Variant

### **Syntax**

`set object = drawobject.OleObject`

### **Legal values**

As defined by the application that created the object.

## **Freelance Graphics: Overstrike property**

{button ,AL('H\_OVERSTRIKE\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS','0)} [See list of classes](#)

(Read-write) Determine the overstrike attribute for the font. The overstrike characters are typed over existing characters, usually indicating a deletion.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *FontRef.Overstrike*

*FontRef.Overstrike* = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Overstrike on
FALSE (0)	Overstrike off

## **Freelance Graphics: PageSelection property**

{button ,AL('H\_PAGESELECTION\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;H\_DOCUMENT\_CLASS;',  
0)} [See list of classes](#)

(Read-only) Get the set of pages currently selected in an application or document.

### **Data type**

PageSelection

### **Syntax**

`set pageselection = object.PageSelection`

### **Legal values**

Any page selection.

## **Freelance Graphics: Pages property**

{button ,AL('H\_PAGES\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS','0)} [See list of classes](#)

(Read-only) Get pages in the presentation document.

### **Data type**

PageCollection

### **Syntax**

**set pagecollection = documentobject.Pages**

### **Legal values**

Any collection of pages in the document.

### **Examples**

```
ForAll page in CurrentDocument.Pages
    Print page.name
End ForAll
Dim num as Integer
num = MyDocument.Pages.Count
Print "There are " + str$(num) + " pages in MyDocument."
```

## **Freelance Graphics: PageTransitionDelay property**

{button ,AL('H\_PAGETRANSITIONDELAY\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the default delay for each page in the presentation when running a screen show.

### **Data type**

Integer

### **Syntax**

*secondsdelay* = *documentobject*.PageTransitionDelay  
*documentobject*.PageTransitionDelay = *secondsdelay*

### **Legal values**

Any positive integer.

## **Freelance Graphics: PageTransitionEffect property**

{button ,AL('H\_PAGETRANSITIONEFFECT\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the screen show page transition effect for each page in the presentation.

### **Data type**

Variant

### **Syntax**

*pagetransitioneffect* = *documentobject*.PageTransitionEffect

*documentobject*.PageTransitionEffect = *pagetransitioneffect*

### **Legal values**

<b>Value</b>	<b>Description</b>
\$SSPageReplace	Instant replacement
\$SSPageBottom	From bottom
\$SSPageLeft	From left
\$SSPageRight	From right
\$SSPageBlinds	Blinds opening
\$SSPageLouvers	Louvers opening
\$SSPageBlocks	Block replacement
\$SSPageCenter	From center out
\$SSPageBoxIn	From outer box in
\$SSPageZigZag	Zigzag replacement
\$SSPageHorzIn	Horizontal lines
\$SSPageHVertIn	Vertical lines
\$SSPageTop	From top
\$SSPageBoxOut	From inner box out
\$SSPageHorizOut	Slide out horizontally
\$SSPageVertOut	Slide out vertically
\$SSPageFade	Fade to new
\$SSPageDiagL	Diagonal left
\$SSPageDiagR	Diagonal right
\$SSPagePanL	Pan left
\$SSPagePanR	Pan right
\$SSPageScrollT	Scroll from the top
\$SSPageScrollB	Scroll from the bottom
\$SSPageDraw	Draw new page
\$SSPageRain	Rain new page
\$SSPagePBrush	Paintbrush new page
\$SSPageShade	Shade new page
\$SSPageCurtain	Open curtain
\$SSPageBMPCol	Bitmap by colors

## **Freelance Graphics: Page property**

{button ,AL('H\_PAGE\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the page on which the drawing object exists.

### **Data type**

Page

### **Syntax**

`set pageobject = drawobject.Page`

### **Legal values**

Any instance of the Page class.

## **Freelance Graphics: Paralndent property**

{button ,AL('H\_PARAINDENT\_PROPERTY\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Paragraph indent property for the text (the number of twips to indent the paragraph).

### **Data type**

Integer

### **Syntax**

*indentation* = *textobject.Paralndent*

*textobject.Paralndent* = *indentation*

### **Legal values**

Any integer.

### **Usage**

Use the FirstIndent property to set the amount of space you want first line of the paragraph indented.

## **Freelance Graphics: Parent property**

{button ,AL('H\_PARENT\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;H\_DOCUMENT\_CLASS;H\_BASEOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Identify the parent application from which the current application or document was launched; or return the string "CurrentApplication" if the object is not a member of the Application or Document class.

### **Data type**

Application

Document

### **Syntax**

*set parent = object.Parent*

### **Legal values**

Any instance of the Application or Document class, or the string "CurrentApplication."

## **Freelance Graphics: Path property**

{button ,AL('H\_PATH\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the path of the application or document.

### **Data type**

String

### **Syntax**

*path* = *applicationobject.Path*

### **Legal values**

Any legal path.

## **Freelance Graphics: Pattern property**

{button ,AL('H\_PATTERN\_PROPERTY\_MEMDEF\_RT;H\_BACKGROUND\_CLASS;H\_BORDER\_CLASS;H\_LINESTYLE\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set a background, border, or line style pattern.

### **Data type**

Variant

### **Syntax**

*pattern* = *object.Pattern*

*object.Pattern* = *pattern*

### **Legal values**

There are separate values for each class. You can view the patterns in the Properties box of the Freelance Graphics user interface for the appropriate object type, and match them with the names below.

#### **Border class**

<u>Value</u>	<u>Description</u>
\$ItsBorderPatternNone	
\$ItsBorderPatternSolid	
\$ItsBorderPatternDashDot	
\$ItsBorderPatternDashDotDot	
\$ItsBorderPatternLongDash	
\$ItsBorderPatternDashed	same as \$ItsBorderPatternDot
\$ItsBorderPatternDot	same as \$ItsBorderPatternDashed

#### **LineStyle class**

<u>Value</u>	<u>Description</u>
\$ItsLineStyleNone	
\$ItsLineStyleSolid	
\$ItsLineStyleDashDot	
\$ItsLineStyleDashDotDot	
\$ItsLineStyleLongDash	
\$ItsLineStyleMediumDash	same as \$ItsLineStyleDot
\$ItsLineStyleDot	same as \$ItsLineStyleMediumDash

#### **Background values**

<u>Value</u>	<u>Description</u>
\$ItsFillNone	
\$ItsFillSolid	
\$ItsFillGray1	
\$ItsFillGray2	
\$ItsFillGray3	
\$ItsFillGray4	
\$ItsFillGray5	
\$ItsFillGray6	
\$ItsFillGray7	
\$ItsFillGray8	
\$ItsFillGray9	same as \$ItsFillGray10
\$ItsFillGray10	same as \$ItsFillGray9

```
$ltsFillLeftDiagonal  
$ltsFillRightDiagonal  
$ltsFillDiagonalHatch  
$ltsFillHorizontal  
$ltsFillVertical  
$ltsFillRegularHatch  
$ltsFillLeftRightGrad  
$ltsFillBottomTopGrad  
$ltsFillNeToSwGrad  
$ltsFillNwToSeGrad  
$ltsFillCenterBoxGrad  
$ltsFillLowBoxGrad  
$ltsFillCenterCircleGrad  
$ltsFillLowCircleGrad  
$ltsFillNeToSwDiagonalStripGrad  
$ltsFillNwToSeDiagonalStripGrad
```

### Examples

```
MyRect.Border.Pattern = $ltsBorderPatternDashed  
MyRect.Background.Pattern = $ltsFillGray8  
MyLine.LineStyle.Pattern = $ltsLineStyleDashDot
```

## **Freelance Graphics: PlacementBlock property**

{button ,AL('H\_PLACEMENTBLOCK\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the "Click here..." block properties for a drawing object. These properties are valid only when *drawobject.isPlacementBlock* is TRUE (non-0).

### **Data type**

PlacementBlock

### **Syntax**

`set placementblock = placementblockobject.PlacementBlock`

### **Legal values**

Any instance of the PlacementBlock class.

## **Freelance Graphics: PlayPriority property**

{button ,AL('H\_PLAYPRIORITY\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the priority with which the object transitions onto the page during a screen show.

### **Data type**

Integer

### **Syntax**

*playpriority* = *drawobject*.PlayPriority

*drawobject*.PlayPriority = *playpriority*

### **Legal values**

1=first object, 2=second, and so on

## **Freelance Graphics: Preferences property**

{button ,AL('H\_PREFERENCES\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the preferences for the application.

### **Data type**

Preferences

### **Syntax**

`set preferences = applicationobject.Preferences`

### **Legal values**

Any instance of the Preferences class.

### **Usage**

You can get the set of preferences in a Preferences object, or you can get or set the individual properties (AutoSave, AutoSaveInterval, BackupDir, and so on) of the Preferences class.

### **Examples**

`CurrentApplication.Preferences.AutoSave = True`

## **Freelance Graphics: Priority property**

{button ,AL('H\_PRIORITY\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the drawing priority of a drawing object.

### **Data type**

Integer

### **Syntax**

*priority* = *drawobject*.Priority

*drawobject*.Priority = *priority*

### **Legal values**

1=first, 2=second, and so on

## **Freelance Graphics: PromptText property**

{button ,AL('H\_PROMPTTEXT\_PROPERTY\_MEMDEF\_RT;H\_PLACEMENTBLOCK\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the prompt text for a "Click here..." block.

### **Data type**

String

### **Syntax**

*prompttext* = *placementblockobject.PromptText*

*placementblockobject.PromptText* = *prompttext*

### **Legal values**

Any string value.

## **Freelance Graphics: ReadOnly property**

{button ,AL('H\_READONLY\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine if the presentation is read-only.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *documentobject.ReadOnly*

*documentobject.ReadOnly* = *value*

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Read-only
FALSE (0)	Read-write

## **Freelance Graphics: Red property**

{button ,AL('H\_RED\_PROPERTY\_MEMDEF\_RT;H\_COLOR\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the amount of red in a Color object.

### **Data type**

Integer

### **Syntax**

*redamount* = *colorobject*.Red

### **Legal values**

0 (no red) to 255 (maximum red).

### **Examples**

```
Dim AmountOfRed as Integer  
AmountOfRed = MyRect.Background.Color.Red
```

## **Freelance Graphics: RemoveMedia property**

{button ,AL('H\_REMOVEMEDIA\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Determine if the object is on removable media.

### **Data type**

Integer (Boolean)

### **Syntax**

*removablemedia* = *drawobject*.**RemoveMedia**

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	On removable media
FALSE (0)	Not on removable media

## **Freelance Graphics: RightIndent property**

{button ,AL('H\_RIGHTINDENT\_PROPERTY\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the Right indent property for the text (the number of twips to indent the text).

### **Data type**

Integer

### **Syntax**

*indentation* = *textobject.RightIndent*  
*textobject.RightIndent* = *indentation*

### **Legal values**

Any integer.

## **Freelance Graphics: RowCount property**

{button ,AL('H\_ROWCOUNT\_PROPERTY\_MEMDEF\_RT;H\_TABLE\_CLASS','0)} [See list of classes](#)

(Read-only) Get the number of rows in a table.

### **Data type**

Integer

### **Syntax**

*rows* = *tableobject*.RowCount

### **Legal values**

Any positive integer.

## **Freelance Graphics: ScanSpeed property**

{button ,AL('H\_SCANSPED\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Scan speed preference (the number of seconds delay between displaying images when scanning in the browser).

### **Data type**

Long

### **Syntax**

*secondsdelay* = *preferencesobject.ScanSpeed*  
*preferencesobject.ScanSpeed* = *secondsdelay*

### **Legal values**

Any value between .1 and 100.0.

### **Examples**

```
CurrentApplication.Preferences.ScanSpeed = 36.5
```

## **Freelance Graphics: SelectedObjects property**

{button ,AL('H\_SELECTEDOBJECTS\_PROPERTY\_MEMDEF\_RT;H\_SELECTION\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the collection of currently selected objects.

### **Data type**

Objects

### **Syntax**

```
set selection = objectsobject.SelectedObjects  
set objectsobject.SelectedObjects = selection
```

### **Legal values**

Any selection of objects.

### **Usage**

This property is useful for saving and then restoring a selection.

### **Examples**

```
Dim MySelection as Objects 'clears and restores selection  
Set MySelection = Selection.SelectedObjects  
Selection.ClearSelection  
Set Selection.SelectedObjects = MySelection
```

## **Freelance Graphics: SelectionCount property**

{button ,AL('H\_SELECTIONCOUNT\_PROPERTY\_MEMDEF\_RT;H\_PAGESELECTION\_CLASS;H\_SELECTION\_CLASS;','0)} [See list of classes](#)

(Read-only) Get the number of selected pages or objects.

### **Data type**

Integer

### **Syntax**

*selectioncount* = *object*.SelectionCount

### **Legal values**

Any integer.

### **Examples**

```
Dim num as Integer  
num = Selection.SelectionCount  
Print "There are " + str$(num) + " selected objects."
```

## **Freelance Graphics: Selection property**

{button ,AL('H\_SELECTION\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;H\_DOCUMENT\_CLASS;H\_PAGE\_CLASS;','0)} [See list of classes](#)

(Read-only) Get a selection of objects in the application or document, or on the currently active page.

### **Data type**

Selection

### **Syntax**

`set selection = object.Selection`

### **Legal values**

Any selection of objects.

### **Examples**

```
Dim MySelection as Selection  
Set MySelection = CurrentPage.Selection  
MySelection.Group
```

## **Freelance Graphics: ShadowColor property**

{button ,AL('H\_SHADOWCOLOR\_PROPERTY\_MEMDEF\_RT;H\_BULLET\_PROPERTIES\_CLASS;H\_TEXTPROPERTIES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Shadow color for a bullet or text.

### **Data type**

Color

### **Syntax**

```
set color = shadowobject.ShadowColor  
set shadowobject.ShadowColor = color
```

### **Legal values**

Any instance of the Color class.

## **Freelance Graphics: ShadowDepth property**

{button ,AL('H\_SHADOWDEPTH\_PROPERTY\_MEMDEF\_RT;H\_BULLET\_PROPERTIES\_CLASS;H\_TEXTPROPERTIES\_CLASS';,0)} [See list of classes](#)

(Read-write) Get or set the Shadow depth for a bullet or text.

### **Data type**

Variant (Enumerated)

### **Syntax**

*shadowdepth* = *shadowobject*.ShadowDepth

*shadowobject*.ShadowDepth = *shadowdepth*

### **Legal values**

Value	Description
\$ItsShadowDepthShallow	Short shadow
\$ItsShadowDepthNormal	Normal shadow
\$ItsShadowDepthDeep	Long shadow

## **Freelance Graphics: ShadowDirection property**

{button ,AL('H\_SHADOWDIRECTION\_PROPERTY\_MEMDEF\_RT;H\_BULLET\_PROPERTIES\_CLASS;H\_TEXTPROPERTIES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the Shadow direction for a bullet or text.

### **Data type**

Variant (Enumerated)

### **Syntax**

*shadowdirection* = *shadowobject.ShadowDirection*

*shadowobject.ShadowDirection* = *shadowdirection*

### **Legal values**

<b>Value</b>	<b>Description</b>
\$ItsShadowNone	No shadow
\$ItsShadowBottomRight	Shadow on bottom right
\$ItsShadowBottomLeft	Shadow on bottom left
\$ItsShadowTopRight	Shadow on top right
\$ItsShadowTopLeft	Shadow on top left

## **Freelance Graphics: Shadow property**

{button ,AL('H\_SHADOW\_PROPERTY\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine if the text has a shadow.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *textobject*.Shadow

*textobject*.Shadow = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Text shadow
FALSE (0)	No text shadow

## **Freelance Graphics: Size property**

{button ,AL('H\_SIZE\_PROPERTY\_MEMDEF\_RT;H\_BULLET\_PROPERTIES\_CLASS;H\_FONT\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine the font or bullet size (in points).

### **Data type**

Double

### **Syntax**

*points* = *object.Size*

*object.Size* = *points*

### **Legal values**

Any positive integer.

## **Freelance Graphics: SkipWelcome property**

{button ,AL('H\_SKIPWELCOME\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Skip welcome preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.SkipWelcome*  
*preferencesobject.SkipWelcome* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Skip Welcome on entry
FALSE (0)	Display Welcome on entry

### **Examples**

```
CurrentApplication.Preferences.SkipWelcome = True
```

## **Freelance Graphics: SmallCaps property**

{button ,AL('H\_SMALLCAPS\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;';0)} [See list of classes](#)

(Read-write) Determine if the font displays as Small caps (smaller point size, but all uppercase).

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *fontobject*.SmallCaps

*fontobject*.SmallCaps = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Small caps
FALSE (0)	No small caps

## **Freelance Graphics: SmartLook property**

{button ,AL('H\_SMARTLOOK\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the SmartMaster look for the current presentation.

### **Data type**

String

### **Syntax**

*smartlook* = *documentobject*.SmartLook

*documentobject*.SmartLook = *smartlook*

### **Legal values**

Any existing SmartMaster look.

**Note** You can use the LotusScript Dir command to list the \*.MAS files in the \SMASTERS\FLG directory.

## **Freelance Graphics: SnapToGrid property**

{button ,AL('H\_SNAPTOGRID\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Snap to grid preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject*.SnapToGrid

*preferencesobject*.SnapToGrid = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Snap objects to grid
FALSE (0)	Do not snap objects to grid

### **Examples**

```
CurrentApplication.Preferences.SnapToGrid = True
```

## **Freelance Graphics: Sound property**

{button ,AL('H\_SOUND\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the file name for a sound associated with the page.

### **Data type**

String

### **Syntax**

*soundfilename* = *pageobject.Sound*  
*pageobject.Sound* = *soundfilename*

### **Legal values**

Any existing sound file name.

## **Freelance Graphics: SpeakerNoteText property**

{button ,AL('H\_SPEAKERNOTETEXT\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the speaker note text displayed on the page.

### **Data type**

String

### **Syntax**

*speakernotetext* = *pageobject.SpeakerNoteText*  
*pageobject.SpeakerNoteText* = *speakernotetext*

### **Legal values**

Any string value.

## **Freelance Graphics: StartNumber property**

{button ,AL('H\_STARTNUMBER\_PROPERTY\_MEMDEF\_RT;H\_BULLET\_PROPERTIES\_CLASS','0)} [See list of classes](#)

(Read-write) Get or set the starting number for numbered bullets.

### **Data type**

Integer

### **Syntax**

*startnumber* = *bulletobject*.StartNumber  
*bulletobject*.StartNumber = *startnumber*

### **Legal values**

Any integer.

## **Freelance Graphics: StartupView property**

{button ,AL('H\_STARTUPVIEW\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the Startup view preference.

### **Data type**

Variant (Enumerated)

### **Syntax**

```
startupview = preferencesobject.StartupView  
preferencesobject.StartupView = startupview
```

### **Legal values**

<b>Value</b>	<b>Description</b>
\$ViewDraw	Current Page view
\$ViewOutliner	Outliner view
\$ViewSorter	Page Sorter view
\$ViewSlideShow	Screen Show view

### **Examples**

```
CurrentApplication.Preferences.StartupView = $ViewSorter
```

## **Freelance Graphics: StrikeThrough property**

{button ,AL('H\_STRIKETHROUGH\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the strikethrough attribute for the font. Strikethrough is a horizontal line that prints through the middle of existing characters.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *fontobject.StrikeThrough*

*fontobject.StrikeThrough* = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Strikethrough on (for example)
FALSE (0)	Strikethrough off

### **Examples**

MyTextObject.TextBlock.Font.StrikeThrough = True

## **Freelance Graphics: Style property**

{button ,AL('H\_STYLE\_PROPERTY\_MEMDEF\_RT;H\_BULLET\_PROPERTIES\_CLASS;',0)} [See list of classes](#)

(Read-write) Determine the Bullet style.

### **Data type**

Variant (Enumerated)

### **Syntax**

*bulletstyle* = *bulletpropertiesobject*.Style

*bulletpropertiesobject*.Style = *bulletstyle*

### **Legal values**

<u>Value</u>	<u>Description</u>
\$ItsBulletNone	None
\$ItsBulletSmallLetters	
\$ItsBulletCapLetters	
\$ItsBulletRomanNums	
\$ItsBulletDecimalNums	
\$ItsBulletSmallDot	
\$ItsBulletLargeDot	
\$ItsBulletSmallSquare	
\$ItsBulletLargeSquare	
\$flwBulletDash	
\$ItsBulletArrowhead	
\$ItsBulletCheck	
\$ItsBulletX	
\$ItsBulletStar	
\$ItsBulletPlus	
\$flwBulletCurvedArrowhead	
\$ItsbulletRndSquare	
\$ItsBulletSmallDiamond	
\$ItsBulletLargeDiamond	
\$\$ItsBulletSmallArrowhead	

## **Freelance Graphics: SubScript property**

{button ,AL('H\_SUBSCRIPT\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine the subscript attribute for the font. Subscripted characters are placed just below the surrounding text.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *fontobject*.SubScript  
*fontobject*.SubScript = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Subscript on
FALSE (0)	Subscript off

## **Freelance Graphics: SuperScript property**

{button ,AL('H\_SUPERSCRIPT\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine the superscript attribute for the font. Superscripted characters are placed just above the surrounding text.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

```
value = fontobject.SuperScript  
fontobject.SuperScript = value
```

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Superscript on
FALSE (0)	Superscript off

## **Freelance Graphics: Table property**

{button ,AL('H\_TABLE\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS','0)} [See list of classes](#)

(Read-write) Get table properties for a drawing object. These properties are valid only when *drawobject*.IsTable is TRUE (non-0).

### **Data type**

Table

### **Syntax**

`set table = drawobject.Table`

### **Legal values**

Any instance of the Table class.

## **Freelance Graphics: TemplateDir property**

{button ,AL('H\_TEMPLATEDIR\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the content topic directory preference.

### **Data type**

String

### **Syntax**

*templatedirectory* = *preferencesobject.TemplateDir*

*preferencesobject.TemplateDir* = *templatedirectory*

### **Legal values**

Any directory.

### **Examples**

```
CurrentApplication.Preferences.TemplateDir = "c:\lotus\smasters\flg"
```

## **Freelance Graphics: TemplatePageCount property**

{button ,AL('H\_TEMPLATEPAGECOUNT\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the content topic page count.

### **Data type**

Integer

### **Syntax**

*pagecount* = *documentobject*.TemplatePageCount

### **Legal values**

Any integer.

## **Freelance Graphics: TextBlock property**

{button ,AL('H\_TEXTBLOCK\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS','0)} [See list of classes](#)

(Read-only) Get the text block properties for a drawing object. These properties are valid only if *drawobject.isText* is TRUE (non-0).

### **Data type**

TextBlock

### **Syntax**

`set textblock = drawobject.TextBlock`

### **Legal values**

Any instance of the TextBlock class.

## **Freelance Graphics: TextProperties property**

{button ,AL('H\_TEXTPROPERTIES\_PROPERTY\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the text properties for a text block.

### **Data type**

TextProperties

### **Syntax**

`set textproperties = textblockobject.TextProperties`

### **Legal values**

Any instance of the TextProperties class.

### **Usage**

You can get a set of TextProperties, or you can get or set the individual properties (FirstIndent, Font, HorizontalAlignment, and so on) of the TextProperties class.

## **Freelance Graphics: TextTightness property**

{button ,AL('H\_TEXTTIGHTNESS\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine the Text tightness for the font.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer

### **Syntax**

*tightness* = *fontobject.TextTightness*

*fontobject.TextTightness* = *tightness*

### **Legal values**

Any integer (always returns zero).

## **Freelance Graphics: Text property**

{button ,AL('H\_TEXT\_PROPERTY\_MEMDEF\_RT;H\_TEXTBLOCK\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the text contained in a text block.

### **Data type**

String

### **Syntax**

*text* = *textblockobject.Text*  
*textblockobject.Text* = *text*

### **Legal values**

Any string value.

### **Examples**

```
MyTextObject.TextBlock.Text = "This text will appear in the text block"
```

## **Freelance Graphics: Title property**

{button ,AL('H\_TITLE\_PROPERTY\_MEMDEF\_RT;H\_PAGE\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the title text block on a page.

### **Data type**

DrawObject

### **Syntax**

`set titleobject = pageobject.Title`

### **Legal values**

Any instance of a page title text block.

### **Usage**

You cannot set this property directly, but you can change the page title by changing the underlying Text object (`pageobject.Title.Text`).

## **Freelance Graphics: Top property**

{button ,AL('H\_TOP\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;',0)} [See list of classes](#)

(Read-only) Get the top edge of an object, in twips.

### **Data type**

Long

### **Syntax**

*toptwip* = *DrawObject*.Top

### **Legal values**

Any positive value.

## **Freelance Graphics: TransitionEffect property**

{button ,AL('H\_TRANSITIONEFFECT\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;H\_PAGE\_CLASS;','0)}  
[See list of classes](#)

(Read-write) Get or set the transition effect for an object or page during a screen show.

### **Data type**

Variant

### **Syntax**

*transitioneffect* = *object*.TransitionEffect

*object*.TransitionEffect = *transitioneffect*

### **Legal values**

The legal values vary by class.

#### **Legal values for the Page class**

<b>Value</b>	<b>Description</b>
\$SSPageReplace	Instant replacement
\$SSPageBottom	From bottom
\$SSPageLeft	From left
\$SSPageRight	From right
\$SSPageBlinds	Blinds opening
\$SSPageLouvers	Louvers opening
\$SSPageBlocks	Block replacement
\$SSPageCenter	From center out
\$SSPageBoxIn	From outer box in
\$SSPageZigZag	Zigzag replacement
\$SSPageHorzIn	Horizontal lines
\$SSPageHVertIn	Vertical lines
\$SSPageTop	From top
\$SSPageBoxOut	From inner box out
\$SSPageHorizOut	Slide out horizontally
\$SSPageVertOut	Slide out vertically
\$SSPageFade	Fade to new
\$SSPageDiagL	Diagonal left
\$SSPageDiagR	Diagonal right
\$SSPagePanL	Pan left
\$SSPagePanR	Pan right
\$SSPageScrollT	Scroll from the top
\$SSPageScrollB	Scroll from the bottom
\$SSPageDraw	Draw new page
\$SSPageRain	Rain new page
\$SSPagePBrush	Paintbrush new page
\$SSPageShade	Shade new page
\$SSPageCurtain	Open curtain
\$SSPageBMPCol	Bitmap by colors

#### **Legal values for the DrawObject class**

<u>Value</u>	<u>Description</u>
\$SSObjReplace	Instant replacement
\$SSObjBottom	From bottom
\$SSObjLeft	From left
\$SSObjRight	From right
\$SSObjBlinds	Blinds opening
\$SSObjLouvers	Louvers opening
\$SSObjBlocks	Block replacement
\$SSObjCenter	From center out
\$SSObjBoxIn	From outer box in
\$SSObjZigZag	Zigzag replacement
\$SSObjHorzIn	Horizontal lines
\$SSObjVertIn	Vertical lines
\$SSObjTop	From top
\$SSObjBoxOut	From inner box out
\$SSObjHorizOut	Slide out horizontally
\$SSObjVertOut	Slide out vertically
\$SSObjFade	Fade to new
\$SSObjDiagL	Diagonal left
\$SSObjDiagR	Diagonal right
\$SSObjScrollL	Pan left
\$SSObjScrollR	Pan right
\$SSObjScrollT	Scroll from the top
\$SSObjScrollB	Scroll from the bottom
\$SSObjDraw	Draw new page
\$SSObjRain	Rain new page
\$SSObjPBrush	Paintbrush new page
\$SSObjShade	Shade new page
\$SSObjCurtain	Open curtain
\$SSObjBMPCol	Bitmap by colors

## **Freelance Graphics: Type property**

{button ,AL('H\_TYPE\_PROPERTY\_MEMDEF\_RT;H\_PLACEMENTBLOCK\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the "Click here..." block type.

### **Data type**

Variant

### **Syntax**

*type* = *placementblockobject.Type*

*placementblockobject.Type* = *type*

### **Legal values**

<b>Value</b>	<b>Description</b>
pbTypeText	Click here to enter text
pbTypeSymbol	Click here to add a symbol
pbTypeChart	Click here to create a chart
pbTypeOrgChart	Click here to create an organization chart
pbTypeTable	Click here to create a table
pbTypeButton	Click here to add a button

## **Freelance Graphics: Underline property**

{button ,AL('H\_UNDERLINE\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS','0)} [See list of classes](#)

(Read-write) Determine the Underline attribute for the font. This underline style is a solid line under both words and spaces.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *fontobject.Underline*

*fontobject.Underline* = *value*

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	Underline on
FALSE (0)	Underline off

### **Examples**

MyText.TextBlock.Font.Underline = True

## **Freelance Graphics: UndoEnabled property**

{button ,AL('H\_UNDOENABLED\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Undo enabled preference.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *preferencesobject.UndoEnabled*  
*preferencesobject.UndoEnabled* = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Undo command enabled
FALSE (0)	Undo command disabled

### **Examples**

```
CurrentApplication.Preferences.UndoEnabled = True
```

## **Freelance Graphics: UnitOfMeasure property**

{button ,AL('H\_UNITOFMEASURE\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the unit of measure used in the application. In Freelance Graphics, this is always [twips](#).

### **Data type**

Variant

### **Syntax**

*unitofmeasure* = *applicationobject*.UnitOfMeasure

*applicationobject*.UnitOfMeasure = *unitofmeasure*

### **Legal values**

The only legal value is \$ltsScaleModeTwip.

### **Examples**

```
CurrentApplication.UnitofMeasure = $ltsScaleModeTwip
```

## **Freelance Graphics: VersionID property**

{button ,AL('H\_VERSIONID\_PROPERTY\_MEMDEF\_RT;H\_BASEOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-only) Determine the version of the code implementing an object. The version number changes for any release that is not 100% compatible with the previous release.

### **Data type**

Long

### **Syntax**

*value* = *object.VersionID*

### **Legal values**

Any numeric value.

## **Freelance Graphics: VerticalAlignment property**

{button ,AL('H\_VERTICALALIGNMENT\_PROPERTY\_MEMDEF\_RT;H\_TEXTPROPERTIES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the vertical alignment property for the text.

### **Data type**

Variant (Enumerated)

### **Syntax**

*verticalalignment* = *textobject.VerticalAlignment*

*textobject.VerticalAlignment* = *verticalalignment*

### **Legal values**

<b>Value</b>	<b>Description</b>
\$ltsAlignmentTop	Align at top
\$ltsAlignmentVertCenter	Center
\$ltsAlignmentBottom	Align at bottom

### **Examples**

```
MyText.TextBlock.TextProperties.VerticalAlignment = $ltsAlignmentTop
```

## **Freelance Graphics: ViewMode property**

{button ,AL('H\_VIEWMODE\_PROPERTY\_MEMDEF\_RT;H\_DOCUMENT\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the view mode.

### **Data type**

Variant (Enumerated)

### **Syntax**

*viewmode* = *documentobject.ViewMode*

*documentobject.ViewMode* = *viewmode*

### **Legal values**

<b>Value</b>	<b>Description</b>
\$ViewDraw	Page view
\$ViewOutliner	Outliner view
\$ViewSorter	Page Sorter view
\$ViewSlideShow	Screen Show view

## **Freelance Graphics: Visible property**

{button ,AL('H\_VISIBLE\_PROPERTY\_MEMDEF\_RT;H\_APPLICATION\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the visible attribute for the application.

**Note** For this release, this is effectively read-only, and always TRUE; sets are ignored.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *applicationobject.Visible*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Visible
FALSE (0)	Not visible

## **Freelance Graphics: WaitForClick property**

{button ,AL('H\_WAITFORCLICK\_PROPERTY\_MEMDEF\_RT;H\_DRAWOBJECT\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine if the object needs a mouse click in order to draw the object on the page during a screen show.

### **Data type**

Integer (Boolean)

### **Syntax**

*value* = *drawobject*.**WaitForClick**

*drawobject*.**WaitForClick** = *value*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	Wait for click to draw the object
FALSE (0)	Do not wait for click to draw the object

## **Freelance Graphics: Width property**

{button ,AL('H\_WIDTH\_PROPERTY\_MEMDEF\_RT;H\_APPLICATIONWINDOW\_CLASS;H\_DOCWINDOW\_CLASS;  
H\_DRAWOBJECT\_CLASS;H\_LINESTYLE\_CLASS;','0)} [See list of classes](#)

(Read-write) Get or set the width of a border or line.

(Read-only) Get the width of the application window, document window, or drawing object.

### **Data type**

Integer (ApplicationWindow and DocWindow classes)

Variant (Border and LineStyle classes)

Long (DrawObject classes)

### **Syntax**

*width* = *object.Width*

*object.Width* = *width*

### **Legal values**

ApplicationWindow, DocWindow, and DrawObject classes: any positive value representing the width in [twips](#).

Border and LineStyle classes:

<b>Value</b>	<b>Description</b>
\$ltsBorderWidthNone	Thinnest
\$ltsBorderWidthVeryThin	
\$ltsBorderWidthThin	
\$ltsBorderWidthModeratelyThin	
\$ltsBorderWidthMedium	
\$ltsBorderWidthModeratelyThick	
\$ltsBorderWidthThick	
\$ltsBorderWidthVeryThick	
\$ltsBorderWidthExtremelyThick	Thickest

### **Examples**

MyRect.Border.Width = \$ltsBorderWidthThin

## **Freelance Graphics: WordDoubleUnderline property**

{button ,AL('H\_WORDDOUBLEUNDERLINE\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;','0)} [See list of classes](#)

(Read-write) Determine the Word double underline attribute for the font. This is a double line under words but not spaces.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *fontobject*.WordDoubleUnderline

*fontobject*.WordDoubleUnderline = *flag*

### **Legal values**

<b>Value</b>	<b>Description</b>
TRUE (non-0)	WordDoubleUnderline on
FALSE (0)	WordDoubleUnderline off

## **Freelance Graphics: WordUnderline property**

{button ,AL('H\_WORDUNDERLINE\_PROPERTY\_MEMDEF\_RT;H\_FONT\_CLASS;',0)} See [list of classes](#)

(Read-write) Determine the Word underline attribute for the font. This is a single line under words but not spaces.

**Note** This property is ignored by Freelance Graphics, and is provided for compatibility with other Lotus products.

### **Data type**

Integer (Boolean)

### **Syntax**

*flag* = *fontobject.WordUnderline*

*fontobject.WordUnderline* = *flag*

### **Legal values**

<u>Value</u>	<u>Description</u>
TRUE (non-0)	WordUnderline on
FALSE (0)	WordUnderline off

## **Freelance Graphics: WorkDir property**

{button ,AL('H\_WORKDIR\_PROPERTY\_MEMDEF\_RT;H\_PREFERENCES\_CLASS;',0)} [See list of classes](#)

(Read-write) Get or set the Work directory preference.

### **Data type**

String

### **Syntax**

```
worddirectory = preferencesobject.WorkDir  
preferencesobject.WorkDir = worddirectory
```

### **Legal values**

Any directory.

### **Examples**

```
CurrentApplication.Preferences.WorkDir = "c:\lotus\work\flg"
```

## **Freelance Graphics: Application class**

Controls a Freelance Graphics session.

### **Base classes**

BaseObject

### **Contained by**

<b>Class</b>	<b>Property</b>
Document	Application

### **Usage**

You can use the CurrentApplication predefined variable to reference the properties and methods of the current Application object.

## **Freelance Graphics: Application class members**

### **Properties**

[ActiveDocument](#)  
[ActiveDocWindow](#)  
[Application AS Application class](#)

## **Freelance Graphics: BulletProperties class**

Level-specific bullet properties.

### **Base classes**

BaseObject

### **Contained by**

<u>Class</u>	<u>Property</u>
TextBlock	BulletProperties

## **Freelance Graphics: BulletProperties class members**

### **Properties**

Color AS Color class

ShadowColor

ShadowDepth

ShadowDirection

Size

StartNumber

Style

### **Methods**

None

### **Functions**

None

### **Events**

None

## **Freelance Graphics: Chart class**

A chart of any type. The Freelance Graphics Chart class is derived from the DrawObject class and contains all methods and properties of the ChartBase class. You create a chart using the CreateChart method of the Page class.

**Note** For more information about the LotusChart ChartBase class, see the Help contents under LotusScript, LotusChart LotusScript Reference, By Category, Classes.

### **Base classes**

ChartBase

### **Contained by**

<b>Class</b>	<b>Property</b>
DrawObject	Chart

## **Freelance Graphics: Color class**

A color. You can specify a color using either the Item or RGBToColor methods of the Colors class.

### **Base classes**

BaseObject

### **Contained by**

<u>Class</u>	<u>Property</u>
Background	Color, BackColor
Border	Color
BulletProperties	Color
LineStyle	Color
Font	FontColor
TextProperties	ShadowColor

## **Freelance Graphics: Color class members**

**coordinates (defined)**

The Freelance Graphics coordinate system has its origin (0,0) at the bottom left corner of the page. Coordinates are measured in [twips](#) (1/1440 of an inch, or 1/567 of a centimeter). In LotusScript syntax, the horizontal coordinate is usually referred to as *x*, and the vertical coordinate as *y*.

## **Freelance Graphics: Document class**

Models a Freelance Graphics presentation. You can create an object of the Document class using the NewDocument method of the Application class.

### **Base classes**

BaseObject

### **Contained by**

<b>Class</b>	<b>Property</b>
Page	Document
Application	ActiveDocument

### **Usage**

You can use the CurrentDocument predefined variable to reference the properties and methods of the currently selected Document object.

## **Freelance Graphics: Document class members**

### **Properties**

## **Overview: Scripting in Freelance Graphics**

Freelance Graphics has an object-oriented Application Programming Interface (API) to Freelance Graphics functionality. It is an extension of LotusScript--a cross-product Basic scripting language.

Use the API to automate Freelance Graphics. For example, you can use the API to create programs that make it easy to edit a frequently used presentation format. You can also use LotusScript to share information from various Lotus applications to perform tasks that you do on a regular basis.

You use the Script Editor and Debugger to create, edit, and debug scripts. With the Freelance Graphics API, you can create "scripts" that execute when you click a button or a "Click here..." block in a SmartMaster content topic, or when an icon is clicked. You can also execute a script when you choose Edit - Script - Run.

### **Sources of information**

There is information in the Help system about the Freelance Graphics API (look under Help - Help Topics - How Do I - Script). There is also Help for the Script Editor and Debugger and for the overall LotusScript language.

For more information about LotusScript, use the coupon enclosed with Freelance Graphics to receive the *LotusScript Programmer's Guide*.

### **The structure of LotusScript**

The structure of the Freelance Graphics API is as follows: There is always one Freelance Graphics application that contains any number of documents; each document contains any number of pages; and each page contains any number of objects.

The API and LotusScript use the principles of object-oriented programming. For information about object-oriented programming and LotusScript in Lotus applications, see the *LotusScript Programmer's Guide*.

### **Classes**

The Freelance Graphics API consists of approximately 25 pre-defined object classes (custom LotusScript data types). Each class definition includes a set of properties and methods.

In Freelance Graphics the API is object oriented; the classes in the API follow the structure of the Freelance Graphics application. That is, the application consists of one or more application windows; an application window consists of documents; and documents consist of pages. Each page may contain a variety of objects, such as circles and squares, charts, OLE objects, and so on.

When you use the Freelance Graphics LotusScript API, an application window, for example, is an instance of the AppWindow class. Individual objects on a page, such as a rectangle or a text block, are instances of the DrawObject class. For a list of classes, as well as reference information, see [Freelance Graphics LotusScript Classes](#).

There are several classes in the Freelance Graphics API that are collection classes, that is, collections of other objects in the presentation. For example, to get from one page to another you would look through all numbers of pages in the document class. Classes that are collection classes are identified as such in the class reference Help.

**Note** In Freelance Graphics script syntax, the index of the first item in a collection or table is one. In other Lotus applications (WordPro and Approach, for example) the index of the first item is zero. In the future, script indexing may be standardized across all Lotus applications. If zero becomes the standard for the first collection or table item, you will need to adjust all existing Freelance Graphics script statements containing collection or table references.

### **Properties**

Properties define the appearance and behavior of objects. Many object classes have properties defining visual attributes such as background color, size, and location. Some properties apply to only one object class. For example, the Title property is unique to the Page class. On the other hand, the Width property is a property of the AppWindow, Border, DocWindow, and DrawObject classes.

Some classes may also act as a property on another class. For example, an instance of the Color class can be a property for an instance of the Font class. When this is the case, it is noted in the property description.

For a list of properties, see [Freelance Graphics LotusScript Properties](#).

### **Methods**

Methods are subprograms that you use to manipulate objects. For example, you can use the Move method to move an instance of the DrawObject class (a rectangle, for example) or you can use the Copy method to copy an instance of the DrawObject class.

For a list of methods, see [Freelance Graphics LotusScript Methods](#).

## **Freelance Graphics API rules**

Every document, page, and object has a name. You can assign names to pages and objects. The document name is read-only. Freelance Graphics stores the names given to pages and objects in the presentation, so that they are available in future script sessions. You can find a draw object if you know its name by using the FindObject method, see [FindObject method](#). You can also use Bind to find the name of a named object of any class. For example,

```
Dim p as Page  
Set p = Bind("Page 1")  
Print p.number
```

Whenever you do anything to an object, that object becomes the selected object.

LotusScript also includes predefined variables that you can use to reference Freelance Graphics objects:

- CurrentApplication--operates on the application and uses the properties and methods of the Application class.
- CurrentApplicationWindow--operates on the application and uses the properties and methods of the ApplicationWindow class.
- CurrentDocument--operates on the current document and uses the properties and methods of the Document class.
- CurrentDocWindow--operates on the application and uses the properties and methods of the DocWindow class.
- CurrentPage--operates on the current page and uses the properties and methods of the Page class.
- Selection--operates on the currently selected object or objects and uses the properties and methods of the DrawObject class.

## **How scripting works**

You can write scripts that operate on documents, pages, and objects. You can also attach scripts to a page, a "Click here..." block, or SmartIcons. These are slightly different processes.

To operate on a document, page, or an object, you use the Script Editor to write a script and then save it as an LSS (or LSO) file. (An LSO file is a compiled LSS file.) You run the script by choosing Edit - Script - Run, and typing the LSS (or LSO) file name.

To attach (or assign) a script to a page or a "Click here..." block, you must be in a content topic (see [To open a content topic](#)). If the script is attached to a "Click here..." block or a page, it is saved in the content topic itself. The script runs "automatically" when the user opens the page or clicks on the "Click here..." block.

See [Attaching a script to a "Click here" block](#), [Attaching a script to a content page](#), or [Creating a script button](#).

For information about attaching scripts to SmartIcons, see [Attaching a script to an icon](#).

For information about creating, editing, and debugging a script, see [Overview: Creating, editing, and debugging a script](#).

---

{button ,AL('H\_FLW\_SCRIPT\_RUN\_STEPS;H\_FLW\_SCRIPT\_CR\_ED\_DEB\_OVER',0)} [See related topics](#)

## **Overview: Creating, editing, and debugging a script**

The Script Editor and Debugger in which you write, run, and debug a script has Help. Press F1 when you want information. To launch the IDE in Freelance Graphics, choose Edit - Script - Show Script Editor. For more information about working in the Script Editor and Debugger, look under Script Editor or Script Debugger in the Freelance Graphics Help index.

**Tip** You can also review the list of available Freelance Graphics classes, methods, and properties by using the browser in the IDE. You can get help on a highlighted item by pressing F1.

### **The TransScript window**

When you run a script using Edit - Script - Run in Freelance Graphics, you can see error messages and output, however, the transcript window must be visible. To view the transcript window choose Edit - Script - Show TransScript Window.

### **Creating objects and assigning object references**

You can access Freelance Graphics objects, including draw objects, pages, and whole presentations, by assigning a reference to that object. References can be assigned to objects that are created within a script or to already existing objects.

To assign an existing Freelance Graphics object a reference variable, use the Set statement. Set must be used any time a reference variable is assigned to an instance of a class. For instance:

```
Dim MyRect as DrawObject
Dim MyPage as Page
'// -----
'// set MyPage equal to the third Page in the presentation, My Rect to the second
item on MyPage
'// -----
Set MyPage = CurrentDocument.Pages.Item(3)
Set MyRect = MyPage.Objects.Item(2)
'// -----
'// set MyRect equals the object with name My Rectangle
'// -----
Set MyRect = CurrentPage.FindObject("My Rectangle")
```

To create a Freelance Graphics object, you must use the appropriate method. In general, object creation is done by methods on the container. The methods for creating draw objects belong to the Page class. For instance, to create a rectangle:

```
Dim MyRect as DrawObject
Set MyRect = CurrentPage.CreateRect (2000, 3000, 3000, 4000)
```

The method for creating a page belongs to the Document class:

```
Dim MyPage as Page
Set MyPage = CurrentDocument.CreatePage("Title of Page", 2)
```

The method for creating a document, NewDocument, belongs to the Application class. Also, OpenDocument opens an existing document (in that sense it "creates" a document object). For example,

```
Set MyDoc = CurrentApplication.OpenDocument("test.prz")
```

### **Using LotusScript predefined variables**

You can use the LotusScript predefined variables to write scripts that operate on the currently selected object, page, document, document window, application window, and application.

A sample script that changes the pattern of the currently selected object is as follows:

```
Sub Main
Selection.Background.Pattern=$LtsFillGray2
End Sub
```

A sample script that gives a page transition delay of ten seconds to the currently selected page is as follows:

```
Sub Main
```

```
CurrentPage.PageTransitionDelay=10  
End Sub
```

### **Launching a script from the command line**

You can launch a script from the command line by clicking Start in the taskbar, choosing Run, and typing:

```
C:\Freelancepath\F32main /r lsscript.lss filename.prz
```

(*lsscript.lss* is the name of the script you want to run and *filename* is the name of the presentation you want to run the script in.)

### **Using scripts and content topics**

In addition to creating a script by choosing Edit - Script - Show Script Editor, you can create and attach a script to a placement block or a page when you have a content topic open. For more information on content topics, see [Overview: What is a content topic](#).

For information about creating and attaching a script to a "Click here" block, see [Attaching a script to a "Click here" block](#).

**Note** Whenever you attach a script to a placement block or to a page, you must name the subroutine "Main."

### **Sample scripts**

For examples of working code and of the object-oriented syntax used in the Freelance Graphics API, review the scripts that are used by SmartMaster content (SMC) files in Freelance Graphics. Scripts in these files refer to the source code contained in the file GTSCRIPT.LSS, located in the \LOTUS\SMARTERS\FLG directory.

**Caution** Modifying script code in this file may cause problems with Freelance Graphics content topics. Make a copy of the file to experiment with.

```
{button ,AL(';H_AV_ATTACHING_A_SCRIPT_TO_AN_ICON_STEPS;H_FLW_SCRIPT_IDE_STEPS;H_FLW_SCRIPT_T_OVER;H_FLW_SCRIPT_RUN_STEPS;H_SMDESIGN_SCRIPT_BUTTON_STEPS',0)} See related topics
```

## **Opening the Script Editor and Debugger**

To open the Script Editor and Debugger, choose Edit - Script - Show Script Editor.

---

{button ,AL('H\_FLW\_SCRIPT\_OVER;H\_FLW\_SCRIPT\_RUN\_STEPS',0)} [See related topics](#)

## **Running a script**

Follow these steps to run a script that is not attached to a page or a "Click here..." block.

1. Choose Edit - Script - Run.
2. Type the script file name in the File name box.
3. Click Open.

**Note** To see error messages and output, open the transcript window; choose Edit - Script - Show TransScript Window.

---

{button ,AL('H\_FLW\_SCRIPT\_IDE\_STEPS;H\_FLW\_SCRIPT\_OVER',0)} [See related topics](#)

## **Setting basic preferences in the Script Editor**

You can set the following preferences in the Basics panel of the Preferences dialog box:

- Tab or Indent Script text
- Display error counts

---

{button ,AL('H\_IDEMENU\_INDENTING\_SCRIPT\_TEXT\_STEPS;H\_IDEMENU\_SETTING\_AND\_CHANGING\_TABS\_IN\_A\_SCRIPT\_STEPS;H\_IDEMENU\_DISPLAYING\_ERROR\_COUNTS\_IN\_A\_SCRIPT\_STEPS;'),0)} [See related topics](#)

### **Creating a new function**

1. In the Script Editor, choose Script - New Function.
2. Type a name in the Name text box.
3. Click OK.

**Note** For more information about creating scripts, see "Scripts, creating" in the Help index.

**Creating a new sub**

1. In the Script Editor, choose Script - New Sub.
2. Type a name in the Name text box.
3. Click OK.

**Note** For more information about creating scripts, see "Scripts, creating" in the Help index.

## **Displaying error counts in a script**

The Show Error Count Dialog check box lets you display the number of errors found after a script has been compiled.

### **Before you compile your script**

1. In the Script Editor, choose File - Script Editor Preferences.
2. Click the Basics tab and select the Show Error Count Dialog check box.
3. Click OK.

### **Compiling your script**

In the Script Editor, choose either Script - Check Scripts for Object. This command executes your uncompiled scripts and displays error counts.

---

{button ,AL('H\_IDEMENU\_BASIC\_PREFERENCES\_CS',0)} [See related topics](#)

## **Exporting a script**

Use this procedure to export (save) a script for the current object.

1. In the Script Editor, choose File - Export Script.
  2. Select the script name or type a new name in the File name list box.
  3. Click OK.
- 

{button ,AL('H\_IDEMENU\_IMPORTING\_A\_SCRIPT\_STEPS',0)} [See related topics](#)

### **Importing a script**

1. In the Script Editor, choose File - Import Script.
  2. Select the script name in the File name list box.
  3. Click OK.
- 

{button ,AL('H\_IDEMENU\_EXPORTING\_A\_SCRIPT\_STEPS',0)} [See related topics](#)

### **Indenting script text**

1. In the Script Editor, choose File - Script Editor Preferences.
  2. Click the Basics tab and select the Smart Indenting check box to automatically indent a script.
  3. Click OK.
- 

{button ,AL('H\_IDEMENU\_BASIC\_PREFERENCES\_CS;',0)} [See related topics](#)

## **Script Editor Debug Menu**

### **Step**

Execute the current statement and enter the procedure it calls.

### **Step Over**

Execute the current statement and the procedure it calls.

### **Step Exit**

Exit the remainder of the current procedure.

### **Continue Execution**

Continue executing the current script.

### **Stop Execution**

Stop executing scripts.

### **Set Breakpoint**

Set breakpoints in the selected lines.

### **Disable Breakpoint**

Disable breakpoints in the selected lines.

## **Script Editor Edit Menu**

### **Undo**

Undo the last edit.

### **Cut**

Cut to the Clipboard.

### **Copy**

Copy to the Clipboard.

### **Paste**

Paste from the Clipboard.

### **Clear**

Erase the current selection without copying anything to the Clipboard.

## **Script Editor File Menu**

### **Save Presentation**

Save the active presentation (but not any scripts).

### **Import Script File**

Import a script for the current object.

### **Export Script File**

Export (save) a script for the current object.

### **Script Editor Preferences**

Set preferences for the Script Editor.

### **Close Script Editor**

Close the active window.

## **Script Editor Help Menu**

### **Help Topics**

List Help topics for the Script Editor.

## **Script Editor Script Menu**

### **Run Current Sub**

Run the script for the current sub and report errors.

### **Check Scripts for Object**

Check the structure and syntax of all uncompiled scripts for the current object and report errors.

### **New Sub**

Create a sub.

### **New Function**

Create a function.

### **Previous Script**

Move to the previous sub.

### **Next Script**

Move to the next sub.

### **Script Pane**

Return focus to the script pane.

### **Switch Panes**

Switch focus between the upper and lower panes.

### **Browser**

Switch to the Browser panel to display script keywords and component names.

### **Output**

Switch to the Output panel to display output for LotusScript print commands.

### **Breakpoints**

Switch to the Breakpoints panel to display breakpoints.

### **Variables**

Switch to the Variables panel to display variables.

### **Setting tabs in a script**

1. In the Script Editor, choose File - Script Editor Preferences.
  2. Click the Basics tab.
  3. Specify the number of spaces you want between tab stops in the Characters list box.
  4. Click OK.
- 

{button ,AL('H\_IDEMENU\_INDENTING\_SCRIPT\_TEXT\_STEPS;H\_IDEMENU\_BASIC\_PREFERENCES\_CS;',0)}
