

Change Path

Change the specified directory. When you change this directory, Install places the highlighted file, and all other features that use the currently specified directory, in the directory you name. To view the default directories for different features, highlight the feature on the Customize dialog box. All features specified on an individual tab may not use the same directory.

You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

To change the drive where Install copies the highlighted file, select a drive from the drop-down box.

Install tells you how much space is available on that drive.

To change the directory, type the directory in the Directory box.

Click OK.

Specify Distribution Directory

Specify the drive and directory where you want to copy the compressed Notes files. Users will run Install from this drive and directory. You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select a drive.

Install tells you the amount of space needed to install Notes on the drive you select, and the amount of space that will be left on that drive after the Notes files have been transferred. If you select a drive that doesn't have enough space to install Notes, a negative number appears next to "Space remaining on drive after transfer."

Type the directory where you want to copy the files.

Click Next.

Confirm Names

Be sure you entered your name and your company name correctly. If you are planning to install Notes on a file server, the User Name appears dimmed.

To continue Install, click Yes.

To correct the names, click No. Install returns to the Welcome to the Lotus Notes Install Program dialog box. You can correct the names there. If "Install on a file server" is checked, you must uncheck it before you can change the names.

Consolidate Lotus Shared Tools Directory

There are Lotus shared tools on your hard drive in directories other than the Lotus Shared Tools directory. Install needs to move all the Lotus shared tools on your hard drive to one directory, named COMPNENT.

Specify the drive and directory where you want to copy the Lotus Shared Tools.

Select a drive.

Install tells you how much space is available on that drive.

Type the directory where you want to copy the Lotus shared tools.

Lotus strongly recommends that you put the Lotus Shared Tools directory (COMPNENT) in your main Lotus product directory. Do not put the Lotus Shared Tools directory in any application's directory because if you later delete that application, you will no longer be able to run your Lotus applications.

Click Next.

File Server Install or Network Distribution

Specify how you want to install Notes on your server.

Select the type of install.

If you want users to run Node Install, which leaves most of the Notes files on the file server and does not copy them to the user's hard disk, select File Server Install.

If you want users to run a complete Install and copy all Notes program files to their hard disk, select Network Distribution Install.

Click Next.

{button ,AL(^H_CI_DISK_COPY_METHOD_RT;H_CI_OVERVIEW_DIST;H_CI_OVERVIEW_NODE;H_CI_OVERVIEW_SRV;0)} [See related topics](#)

Exit Install

You chose to exit Install before the installation was complete. Install has not copied the files necessary to run Notes to your hard disk or file server.

To continue Install, click No. Install returns to the previous dialog box.

To exit Install, click Yes. You must run Install again to run Notes.

Location of Lotus Shared Tools Directory on File Server

Specify the network drive where your network administrator put the Lotus Shared Tools directory. The Lotus Shared Tools directory contains files for tools shared by your Lotus applications, such as Spell Checker.

To change the drive that contains the Lotus Shared Tools directory, select a drive from the Drive drop-down box.
Click Next.

Node Options

Choose whether you want to install on your hard disk the features your network administrator has made available. You can still use features you don't copy to your hard disk, but you will use the copy on the network. However, features copied locally may run faster.

To install the features on your hard disk, select the "Copy features to hard disk" check box.

Click Next.

Personal Directory

Specify where you want to install the Lotus files on your hard disk. Lotus files include configuration files for your Lotus applications.

You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select the drive where you want to put your personal directory.

Install tells you how much space is available on that drive.

Type the directory where you want to put the Lotus files in the Personal Directory text box.

Click Next.

Personal Directory & Node Install Options

Specify where you want to install the Lotus files on your hard disk (Lotus files include configuration files for your Lotus applications). Choose whether you want to install on your hard disk the features your network administrator has made available. You can still use features you don't copy to your hard disk, but you will use the copy on the network. However, features copied locally may run faster.

You can also click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select the drive where you want to put your personal directory.

Install tells you how much space is available on that drive.

Type the directory where you want to put the Lotus files.

To copy the features your network administrator has made available, select the "Copy features to hard disk" check box.

Click Next.

Overview: Distribution Install

This Install program installs compressed Notes files on a network file server so that network administrators or users can run a Standalone, File Server, or Distribution Install from the install source on the network. It allows you to:

Enter your name and company name.

Select where you want to install Notes on your file server.

Specify the drive and directory where you want to copy the compressed Notes files.

Overview: Node Install

This Install program installs Notes files on a network node for one user. It allows you to:

Enter your name.

Select where you want to install the Lotus files on your hard disk.

Overview: File Server Install

This Install program installs Notes on a network server. Users then perform a Node Install to run the product on a network. It allows you to:

- Enter your name and company name.

- Select where you want to install the Notes files on your file server.

- Select the features node users can copy to their hard disks.

Overview: Standalone Install

This Install program installs Notes on a single computer for one user. It allows you to:

- Enter your name and company name.

- Select the location of the files on your hard disk.

- Select only the features you want to install.

Paradox Network Information

You can access Paradox tables on a network.

Select the "Access Paradox tables on the network" check box if you plan to access Paradox tables on a network.

If you share Paradox tables with other users on a network:

Select the "Share tables with other users" check box.

Type the drive and path of PARADOX.NET (for example, P:\PDOXDATA) in the text box.

Click Next.

Specify Main Lotus Directory

Specify the drive and directory where you want Install to create the main Lotus directory. Install creates the appropriate subdirectories (such as Work, Samples, Backup, etc.) and copies all Notes files into the correct directory.

It is strongly recommended that you specify the same main Lotus directory each time you install a Lotus product. This way, you will be able to easily identify all the files associated with each Lotus product, and will not copy duplicate versions of a file when you install the next Lotus product.

You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

To change the drive for the main Lotus directory, select a drive from the Drive drop-down box.

Install tells you how much space is available on that drive.

To change the main Lotus directory, type the directory in the Directory text box.

Click Next.

You can change individual subdirectories when you select the Customize option.

Select Program Folder

Select the program folder where you want Install to copy the Notes files. If this is the first time you have installed a Lotus product, you may want to create a new folder.

In some cases, you may want to remove a folder. For example, you may misspell the folder name and not notice until after you create it. You can remove any folder you created during this session of Install. You cannot reorganize your entire folder structure at this point.

To create a new folder

Select the folder under which you want to create the folder into which Install copies the Notes files, or accept the default.

Click New Folder.

A new folder appears, with the name "New Folder."

Rename the new folder by typing a name in the Folder Name text box.

Click Next.

To remove a folder

Select the folder you want to remove.

Click Remove Folder.

Select Program Group

Select the Windows program group where you want Install to place the Notes application icons.

To place the application icons in an existing program group

Select the program group from the list box.

Click Next.

To create a new program group

Type the name for the new program group in the Name text box.

Click Next.

SQL Server Name

Type the name of the SQL server. If you need information about the name of the server, see your network administrator.

Click Next.

Specify Lotus Shared Tools Directories

Specify the drives and directories where you want to copy the Lotus shared tools. You can click Browse to search the drives and directories to which you have access. You must be able to write to the drives or directories you choose.

For Freelance Graphics, Word Pro, Approach, and SmartCenter Shared Tools

Select a drive from the top Drive drop-down box.

Install tells you how much space is available on that drive.

Type the directory where you want to copy the Lotus shared tools in the top Directory text box.

Lotus strongly recommends that you put the Lotus Shared Tools directory (COMPONENT) in your main Lotus directory. Do not put COMPONENT in any application's directory because if you later delete that application, you will no longer be able to run your Lotus applications.

Click Next.

For 1-2-3, Organizer, and ScreenCam Shared Tools

Select a drive from the bottom Drive drop-down box.

Install tells you how much space is available on that drive.

Type the directory where you want to copy the Lotus shared tools in the bottom Directory text box.

Do not specify a UNC path or use long directory names.

Lotus strongly recommends that you put the Lotus Shared Tools directory (LOTUSAPP) in your main Lotus directory. Do not put LOTUSAPP in any application's directory because if you later delete that application, you will no longer be able to run your Lotus applications.

Click Next.

If you have a LOTUSAPP directory for applications that you will continue to use, you can specify that directory at this time. However, if you later delete that directory, you must reinstall the current version of 1-2-3, Organizer, or ScreenCam.

Node User Feature Access

Select the features that you want to allow your node users to copy from the file server to their own hard disks. Node users can run all features from the copy of Notes on the file server, but a local copy may run faster.

To allow node users to copy a feature, select the check box for that feature.

Click Next.

Install Complete

You have successfully installed this product. However, some of the system files this product installs were in use when Install copied the files to your machine.

When you reboot your machine, the new versions of these files will be copied to the correct location on your machine. Until you reboot, this product will not run correctly.

If you choose to reboot now, you'll have an opportunity to save any unsaved work in your open applications.

To reboot now, click Yes.

To continue with the Install program, click No. You must reboot before you can run this product.

Customize

Select the features you want to install.

To select the group of features you want to customize, click the tab for that group.

By default, some features on each tab are selected, while others may not be.

If a check mark appears in the check box next to the feature, that feature will be installed. If the check box is empty, that feature will not be installed.

You must have purchased the Lotus Domino Advanced Services license to install the features on the Advanced Services tab.

Click the check box next to each feature you want to add to, or remove from, the installation list.

The description text box contains a description of the currently highlighted feature.

In some cases, several items may be listed as part of a group under a main item. If you remove the check mark next to the main item, all the check marks are also removed from the sub-items. If you select only one sub-item, a check mark also appears next to the main item. However, only the checked items will be installed.

As you add or remove items from the install list, the amount of space required changes accordingly. The number next to "Space needed for selected features" shows the space required to install all selected features.

The number next to "Space available on selected drive" shows you how much space is available on the selected drive.

Click Next.

Install Options: Domino server

Select the type of install and specify where you want to put the Domino files that the Install program copies to your hard disk. Click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select the type of install: Domino server, Domino Mail server, or Customize features - Manual install.

Domino server installs all the components needed to run the Domino server for Windows.

Domino Mail server installs all the components needed to run the Domino Mail server for Windows.

Customize features - Manual install lets you select which components you want to install. You must select this option to install Domino Advanced Services.

If you select Customize features - Manual install and later decide that you want to add a feature you did not install, you must run the Install program again.

Specify the drive and directory or folder for the Domino program files and Domino data files.

To change the drive where Install copies the Domino files, select a drive from the Drive drop-down box. Install displays how much space is available on the drive you select.

To change the directory or folder where Install copies the Domino files, either type a new name in the text box or click Browse to choose from a list of available drives and directories.

Click Next.

Netware Volumes

The Install program displays the currently mapped drive. Enter the name of the NetWare volume to which you want to install the software. Be sure to confirm that this is an actual NetWare volume.

Install Options: Domino server for NetWare

Select the type of install and specify where you want to put the Domino files that the Install program copies to your NetWare volume. Be sure to specify a drive that is mapped to a NetWare volume. Click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select the type of install: Domino server or Customize features - Manual install.

Domino server installs all the components needed to run the Domino server for NetWare.

Customize features - Manual install lets you select which components you want to install. You must select this option to install Domino Advanced Services.

If you select Customize features - Manual install and later decide that you want to add a feature you did not install, you must run the Install program again.

Specify the drive and directory or folder for the Domino server files and Notes Administrative Client files.

To change the drive where Install copies the Domino or Notes files, select a drive from the Drive drop-down box. Install displays how much space is available on the drive you select.

To change the directory or folder where Install copies the Domino or Notes files, either type a new name in the text box or click Browse to choose from a list of available drives and directories.

Click Next.

The Install program installs a Notes administration client with the Domino server. You administer the Domino server with this Notes client.

Install Options: Notes client

Select the type of install and specify where you want to put the Notes files that the Install program copies to your hard disk. Click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select the type of install: Standard Install, Notes Designer for Domino, or Customize features - Manual install.

Standard Install installs the components needed to run the Notes workstation program for Windows.

Notes Designer for Domino installs the components needed to run the Notes Designer for Domino workstation program for Windows. If you have purchased a Notes Designer for Domino license and choose this option, Notes installs the components needed to design, create, and administer applications.

Customize features - Manual install lets you select which components you want to install. You must select this option if you want to install full online Help, the documentation databases, or additional templates on your workstation. If you do not install the documentation or help databases, you can still access them by adding the databases to your workspace from a Domino server.

If you select Customize features - Manual install and later decide that you want to add a feature you did not install (except for the help and documentation databases, which you can access on a server), you must run the Install program again.

Specify the drive and directory or folder for the Notes program and data files.

To change the drive where Install copies the Notes files, select a drive from the Drive drop-down box. Install displays how much space is available on the drive you select.

To change the directory or folder where Install copies the Notes files, either type a new name in the text box or click Browse to choose from a list of available drives and directories.

Click Next.

Directory Selection

Specify where you want to put the Notes files that the Install program copies to your hard disk. Click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Specify the drive and directory or folder for the Notes program files and Notes data files.

To change the drive where Install copies the Notes files, select a drive from the Drive drop-down box. Install displays how much space is available on the drive you select.

To change the directory or folder where Install copies the Notes files, either type a new name in the text box or click Browse to choose from a list of available drives and directories.

Click Next.

Notes Default Preferences

Specify where you want Install to copy certain Notes files on your hard disk. You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

To change the drive, select a drive from the Drive drop-down box.

Install tells you how much space is available on that drive.

To change the directory, type the directory in the Directory text box.

Click OK.

If you add another language to your copy of Notes, you cannot change the drive or directory. The files for the new language will be installed with the existing copy of Notes.

Remove Product Files

The Install program has found a Windows 3.x version of Notes. You can remove this version, or leave it on your system.

Click Yes to remove the Windows 3.x version of Notes. After these files are removed, the Install program will continue.

Click No to continue installing Notes.

Notes is Running

The Lotus Install program has detected that a version of Notes is currently running. To continue installing this version of Notes, you must close the version that is running.

To continue the Install program

Press ALT+TAB to switch to the version of Notes that is running.

Choose File - Exit to close that version.

Press ALT+TAB to return to the Install program.

Click Continue to proceed with the installation process.

Sample Notes Help Topic (Put the dialog box name here)

Sample text.

Install Options

Select the type of install and specify where you want to put the Notes files that Install copies to your hard disk. You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select the type of install: Standard Install, Server Install, or Customize features - Manual Install.

If you select Customize features and later decide that you want to add a feature you did not install, you must run Install again.

Specify the drive and directory or folder for the Notes program files and Notes data files.

To change the drive where Install copies the Notes files, select a drive from the Drive drop-down box. Install displays how much space is available on the drive you select.

To change the directory or folder where Install copies the Notes files, either type a new name in the text box or click Browse to choose from a list of available drives and directories.

Click Next.

Install Options

Select the type of install and specify where you want to put the Notes files that Install copies to your hard disk. You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Select the type of install: Default features or Customize features.

If you select Customize features and later decide that you want to add a feature you did not install, you must run Install again.

Specify the drive and directory or folder for the Notes program files and Notes data files.

To change the drive where Install copies the Notes files, select a drive from the Drive drop-down box. Install displays how much space is available on the drive you select.

To change the directory or folder where Install copies the Notes files, either type a new name in the text box or click Browse to choose from a list of available drives and directories.

Click Next.

Files have been found in the Install Directory

The Install program found Notes program files in the directory you selected as your destination install directory.

The following options are available:

Click the **Select All** button to delete all files in the directory.

Highlight obsolete files to delete only those files. The Install program automatically updates obsolete files with newer versions.

Do not highlight any files. The Install program automatically updates obsolete files with the newer versions, but does not delete the obsolete files.

Multiple Copies of Notes for Windows

The Install program found a previous copy of Notes for Windows installed on your system.

Lotus recommends that you install Release 4.6 in the same directory as the previous copy. Doing this automatically updates all the files you need to run Notes.

If you choose to install Notes in a different directory, the previous copy of Notes will not be deleted.

Note The Install program updates the previous NOTES.INI file to reflect any changes you specify during the new installation.

Notes Directory

Specify the drive and directory where you want to put the Notes files on your hard disk. You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

To change the drive where Install copies the Notes files, select a drive from the Drive drop-down box.

Install tells you how much space is available on that drive.

To change the Notes directory, type the directory in the Notes Directory text box.

Click Next.

Install Options & Directories

Select the type of install, and specify the drives and directories where you want to put the Notes files and the Lotus shared tools that Install copies to your hard disk. You can click Browse to search the drives and directories to which you have access. You must be able to write to the drive or directory you choose.

Choose the type of install: Default features or Customize features.

If you choose Customize features and later decide that you want to add a feature you did not install, you must run Install again.

To change the drive where Install copies the main Notes product files, select a drive from the first Drive drop-down box.

Install tells you how much space is available on that drive.

To change the main Notes product directory, type the directory in the Notes Directory text box.

To change the drive where Install copies additional Notes files, select a drive from the second Drive drop-down box.

Install tells you how much space is available on that drive.

To change the Notes subdirectory, type the directory in the Notes Directory2 text box.

To change the drive where you want to put the Lotus shared tools, select a drive from the third Drive drop-down box.

Install tells you how much space is available on that drive.

To change the Shared Tools directory, type the directory in the Lotus Shared Tools Directory text box.

Lotus strongly recommends that you put the Lotus Shared Tools directory (COMPONENT) under your main Lotus product directory. Do not put the Lotus Shared Tools directory in any application's directory because if you later delete that application, you will no longer be able to run your Lotus applications.

Click Next.

Welcome to the Lotus Notes Install Program

Names you enter in this dialog box become permanent and visible parts of your copy of Notes. You will see these names every time you start Notes, so be careful to type them correctly. You cannot change the names once they are recorded.

Type your name.

You can ignore this field if you plan to install this version of Notes on a file server.

Type your company name.

If you do not have a company name, type your name a second time.

If you install this version of Notes on a file server, the name you enter in this field will be used whenever a user runs a Node Install.

If you are a network administrator installing Notes on a file server, select the "Install on a file server" check box. If you install the product on a file server and install nodes for each user, users can share the copy of the product you install on the file server. You can also do a distribution install, where the install source is copied to the file server. You can then perform Standalone, File Server, or subsequent Distribution installs from that copy.

When you select this check box, the name you entered in the "Your name" text box is dimmed.
