

Reference Desk for FTP Software, Inc.

Information on Demand

Reference Desk provides access to online versions of OnNet16™ version 2.5 documentation (listed below).

FTP Titles

[Roadmap](#) Provides a graphical representation of the documentation set.

[User's Guide](#)

Provides a product overview and describes how to perform everyday networking tasks using OnNet16 applications for Microsoft Windows.

[Advanced User's Guide](#)

Describes how to use the more sophisticated features of the product.

Part I, "Installing and Configuring OnNet16," provides detailed information about installing and configuring the product, and about configuring the kernel (TCP/IP protocol stack) to interoperate with other network operating systems.

Part II, "Managing OnNet16 Kernel and Network Services," explains how to manage the kernel and use applications to solve potential problems.

Part III, "Using Network Security," describes how to configure support for Kerberos security or SOCKS security on your PC.

[Using Networking Commands in DOS](#)

Describes how to perform everyday networking tasks using OnNet16 commands for DOS.

[Command Reference](#)

Describes how to use OnNet16 commands for DOS in detail.

[Document Conventions](#)

Describes the typographical conventions used in the documentation.

[Notices](#)

Contains copyright and license notices.

[Getting Technical Assistance](#)

Describes how to obtain technical support.

Document Conventions

FTP Software manuals use the typographical conventions shown in the following table:

<u>Convention</u>	Description
ALL CAPITALS	Indicates, in text, the names of directories, files, libraries, and paths; for example, ... the PCTCP.INI file ... When the NETLIB.LIB library ... (Exception: UNIX names are shown exactly as they should appear, that is, in mixed case or lowercase.)
Monospace type	Indicates file examples and information that the system generates and displays on the screen, including messages, prompts, and configuration file sections; for example, Host Responding ... The Mailbox name? prompt appears. The sec-key= parameter ...
Bold monospace type	Indicates commands that you enter; for example, C:\> lw -h Enter mget at the system prompt.
Bold regular type	Indicates, in text and in syntax constructions, command names (including literal arguments and options); for example, ... with the idls -a command ... In addition, the boldface term kernel represents a particular TSR kernel command (such as ethdrv). Elsewhere, the term "kernel" refers to any of the PC/TCP kernels.
<i>Italic regular type</i>	Indicates, in text and in syntax constructions, variable options and arguments (including function parameters), for which you must substitute a value; for example,

arp *hostname*

... where *hostname* is ...

Italic is also used occasionally for emphasis; for example,

This line *must* appear.

[]

Indicates, in syntax constructions, *optional* arguments. If you choose to use an optional argument, you must type it exactly as shown (without the brackets); for example,

... *remote_filename* [**image**]

Multiple optional arguments are listed individually or combined within brackets. If you choose to use any of the optional arguments, you must type them exactly as shown (without the brackets); for example,

... *host* [-**d**][-**t**] ... or ... *host* [-**dt**]

|

Indicates, in syntax constructions, *exclusive* arguments, for which you enter only one of the alternatives; for example,

comscript *connection* [**dialup** | **hangup** | *keyword*]

(|)

Indicates, in syntax constructions, *required* exclusive arguments or options, for which you *must* enter one of the alternatives (without the parentheses); for example,

ftftp (**get** | **overwrite** | **put**)

Note:

Indicates important information; for example,

Note: The **lpr** command lets you use wildcards in filenames.

Caution:

Indicates information to prevent you from damaging software; for example,

Caution: Back up your CONFIG.SYS file before you edit it.

Key+Key

Indicates that you must hold down the first key while you press (and hold down) the subsequent key(s); for example,

Press Ctrl+P to move to a previous line.

Key, Key

Indicates that you press (and release) each of the keys in sequence; for example,

Press Alt, F, X to exit from the DOS shell.

All examples and procedures in this documentation use the default path- and filenames, unless otherwise specified.

Many commands accept pathname arguments. In general, you can use either slashes (/), which is the UNIX convention, or backslashes (\), which is the DOS, Windows, and OS/2 convention, to specify directory names or pathnames in commands.

Note: Pathnames interpreted on a remote host *must* conform with the path naming conventions on that host.

The *Command Quick Reference* is a paper-only document (online documents appear in green). Online access to the information that it contains is available in the *Command Reference* manual.

Look for this Help button in the interface of each application.

Technical assistance

Users in the U.S. and Canada, and worldwide resellers, contact FTP Software®:

Telephone: **(800) 382-4387**

(508) 685-3600

E-mail: **support@ftp.com**

Fax: **(508) 794-4484**

or

Users outside of the U.S. and Canada, contact your local reseller.
